

# THE SPEED OF LIGHT

The background of the slide features a bright, glowing light source on the right side, from which numerous rays of light emanate, spreading outwards. The rays are depicted as sharp, elongated streaks of light, creating a sense of rapid movement and energy. The overall color palette is dominated by deep blues and blacks, with the intense white and yellow of the light source providing a strong contrast. The composition is dynamic, with the light rays converging towards the source and then diverging as they move away.

planetary orbits what Cassini ovals are to binaries The transition from a Bernoulli lemniscate to Cassini ovals is discussed in terms the instability criteria of Roche lobes and their fission When the second derivative of the curve is no longer constant the Newton inverse law does not apply and new central forces appear which can be derived from the radius of aberrancy just as the inverse square law follows from the radius of curvature The logarithmic spiral becomes periodic in velocity space and a new Hubble law appears between acceleration and velocity This has the effect of decreasing the decay rate of accelerations so that they can explain the flat rotational curvatures observed in spiral galaxies Numerical relativity has reduced its conception of general relativity to a Le Sage type theory thereby making it refutable

*More Light on the Expanding Universe* Les Hardison, 2016-03-08 More Light on the Expanding Universe explores the ramifications of the existence of a fourth physical dimension into which the universe is expanding One of these is the possibility that light travels at infinite speed from the source to any receptor anywhere rather than at the 300 000 Kilometers per second generally accepted by contemporary physicists This resolves many of the paradoxes in present day physics and simplifies many of the complexities associated with Einsteins special theory of relativity In More Light on the Expanding Universe Les Hardison now retired from a career as a mechanical engineer reveals decades of pondering the state of physics and develops this alternate premise This volume continues the presentation begun in its companion work A New Light on the Expanding Universe More Light on the Expanding Universe proceeds in a thoughtful and orderly way to draw out the consequences of reconceiving the nature of light In the course of seventeen chapters the explication of this revised understanding of light relies both on traditional thought experiments and on the development and explanation of the equations that physicists typically use to delineate statements of the nature and interaction of matter and energy The final chapter provides both context and commentary on the journey the author undertook to develop the works statement of the nature of physical reality This exploration proposes a novel conception of physics and explains the ramifications of asserting that light travels from a source to any detector instantaneously rather than at a finite velocity
