Rational Choice Theory And Large-Scale Data Analysis Hans-peter Blossfeld,Gerald Prein,2019-09-16 The relationship between rational choice theory and large scale data analysis has become an important issue for sociologists Though rational choice theory is well established in both sociology and economics its influence on quantitative empirical sociology has been surprisingly limited This book examines why there is hardly a link between the t

Forecasting Mortality in Developed Countries E. Tabeau,Anneke van den Berg Jeths,Christopher Heathcote,2006-04-11 Information on future mortality trends is essential for population forecasts public health policy actuarial studies and many other purposes Realising the importance of such needs this volume contains contributions to the theory and practice of forecasting mortality in the relatively favourable circumstances in developed countries of Western Europe In this context techniques from mathematical statistics and econometrics can provide useful descriptions of past mortality The naive forecast obtained by extrapolating a fitted model may give as good a forecast as any but forecasting by extrapolation requires careful justification since it assumes the prolongation of historical conditions On the other hand whilst it is generally accepted that scientific and other advances will continue to impact on mortality perhaps dramatically so it is impossible to quantify more than the outline of future consequences with a strong degree of confidence The decision to modify an extrapolation of a model fitted to

historical data or conversely choosing not to modify it in order to obtain a forecast is therefore strongly influenced by subjective and judgmental elements with the quality of the latter dependent on demographic epidemiological and indeed perhaps more general considerations. The thread running through the book reflects therefore the necessity of integrating demographic epidemiological and statistical factors to obtain an improvement in the prediction of mortality.

Cradle to Grave: Life-Course Change in Modern Sweden Jan O. Jonsson, Colin Mills, 2021-04-14. The empirical study of individuals' life course is one of the most promising areas of research within sociology today. Increased availability of large scale longitudinal data and improved statistical methods have made it possible to address theoretically relevant questions about events such as entrance into the labour market, job mobility, divorce and death. This book consists of studies capturing the life course from the cradle to the grave. The research questions include long term consequences of childhood conditions, family formation and school careers, work and parental leave, gender discrimination in job promotion, divorce and occupational career persistence in poverty and the intriguing question of why the highly educated tend to survive everyone else. The studies shed light on the relation between family and work, on gender inequality, social class differences, welfare state redistribution and labour market processes. They do this in a particular context, namely Sweden in the post war period that is during the decades that formed one of the most advanced welfare states in modern history. One chapter provides a descriptive account of institutional and life course change in Sweden during that period. Most authors use the Swedish level of living surveys, a unique data set providing ample opportunity to study social processes in a longitudinal perspective. The book will therefore be of relevance to those with interests in the Swedish welfare state as well as those with theoretical and research interests in the reproduction of inequality.

Modern Classification and Data Analysis Krzysztof Jajuga, Grażyna Dehnel, Marek Walesiak, 2022-10-16. Providing a balance between methodological and empirical studies and covering a wide range of topics, the book is divided into five parts focusing on methods and applications in finance, economics, social issues and to COVID-19 data. The book is aimed at a wide audience including researchers at universities and research institutions, PhD students as well as practitioners, data scientists and employees in public statistical institutions.

Who Marries Whom? Hans-Peter Blossfeld, A. Timm, 2012-12-06. Marriage and social inequality are closely interrelated. Marriage is dependent on the structure of marriage markets and marriage patterns have consequences for social inequality. This book demonstrates that in most modern societies the educational system has become an increasingly important marriage market, particularly for those who are highly qualified. Educational expansion in general and the rising educational participation of women in particular unintentionally have increased the rate of assortative meeting and assortative mating.

across birth cohorts Rising educational homogamy means that social inequality is further enhanced through marriage because better and worse educated single men and women pool their economic and sociocultural advantages and disadvantages within couples In this book we study the changing role of the educational system as a marriage market in modern societies from a cross national comparative perspective Using life history data from a broad range of industrialized countries and longitudinal statistical models we analyze the process of spouse selection in the life courses of single men and women step by step The countries included in this book vary widely in important characteristics such as demographic behavior and institutional characteristics The life course approach explicitly recognizes the dynamic nature of partner decisions the importance of educational roles and institutional circumstances as young men and women move through their life paths and the cumulation of advantages and disadvantages experienced by individuals

Sequence Analysis Marcel Raab, Emanuela Struffolino, 2022-04-11 Sequence analysis SA was developed to study social processes that unfold over time as sequences of events It has gained increasing attention as the availability of longitudinal data made it possible to address sequence oriented questions This volume introduces the basics of SA to guide practitioners and support instructors through the basic workflow of sequence analysis In addition to the basics this book outlines recent advances and innovations in SA The presentation of statistical substantive and theoretical foundations is enriched by examples to help the reader understand the repercussions of specific analytical choices The extensive ancillary material supports self learning based on real world survey data and research questions from the field of life course research Data and code and a variety of additional resources to enrich the use of this book are available on an accompanying website

Events in Social Networks Christoph Stadtfeld, 2012 Interactions between people are ubiquitous When people make phone calls transfer money connect on social network sites or visit each other these actions can be collected as dyadic directed relational events Each of those events can be understood as driven by multiple individual decisions that at least partially involve rational considerations This book aims at developing models that allow to understand individual event decisions in the context of large social networks

Advising on research methods Herman Ader, Gideon J. Mellenbergh, 2014-01-31. This reader contains a collection of articles based on presentations held at the KNAW Colloquium Advising on research methods held in March 2007 in Amsterdam. For a table of contents see <http://www.know.nl/colloquia/advising/index.cfm/proceedings>. Quantitative Narrative Analysis Roberto Franzosi, 2010. Quantitative Narrative Analysis focuses on the following issues: 1. the fundamental features of narrative as a specific type of text genre with certain invariant linguistic properties; 2. how the invariant properties of narrative can be used to structure narrative information in ways that basic qualitative information can then be analyzed quantitatively; 3. story grammars or Subject-Action-Object and respective modifiers such as Time and Space of Action; 4. reliability and how the computer and linguistic framework of the approach greatly increase data reliability; 5. data analysis. The book does not focus on general problems of data analysis; it will show how textual data can be analyzed with numbers.
