Technology And Infertility Clinical Psychosocial Legal And Ethical Aspects:

Technology and Infertility Machel M. Seibel, Ann A. Kiessling, Judith Bernstein, Susan R. Levin, 2012-12-06 Medicine is changing at a speed never witnessed before in history With each passing year medical technology achieves the capacity to provide cures and improve treatments that even a short time before were difficult to conceptualize and impossible to provide Reproductive technology personifies this concept perhaps better than any other field of medicine The 1990s have seen an explosion in endoscopic and ambulatory procedures the application of molecular biology to clinical conditions and the refinement of assisted reproduction to allow third parties donors and surrogates into the process of family building More than ever before comprehensive medical care requires a team approach However the team comprises not only medical and scientific personnel but also mental health professionals lawyers and ethicists This integrated and multidisciplinary approach to medical care will become even more necessary as medical capabilities continue to develop faster than society can respond This book reflects such an approach It is based on a Harvard Postgraduate Course in June 1990 entitled Infertility in the 1990s Technological Advances and Their Psychosocial Implications that was sponsored by the Faulkner Centre for Reproductive Medicine The first half of the course was directed by Drs M Seibel A Kiessling and C Richards The second half of the course was directed by Dr M Seibel J Bernstein R N and S Levin LICSW *Technology and Infertility* Machel M Seibel, Ann A Kiessling, Judith Bernstein, 1993-06-24 *Current Catalog* National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965 70 Complex Adoption and Assisted Reproductive Technology ,2001-03-07 New pathways to parenthood are being traveled by growing numbers of couples and single adults including many who face medical and social barriers to having children From a psychological standpoint families formed by complex adoption and assisted reproductive technology ART are first and foremost just that families Yet they also face a unique array of issues and challenges that may be clarified and resolved in the therapeutic setting This much needed book provides a deeper understanding of the ways that complex adoption and ART shape the life experience of children and parents identifying important areas and methods for assessment and treatment Combining developmental and ecological research with in depth case material the book establishes an integrative framework for clinical practice The authors draw upon knowledge and skills gained from working in a variety of new family contexts In the area of adoption many new options have evolved that differ from traditional practices of adoption at birth Thousands of older children in foster and institutional care in the United States and abroad are awaiting permanent placements Open adoption kinship adoption and transracial adoption are also transforming family life as is the use of ART which raises significant issues of family identity and family process The book explores such key themes as the significance of early experience the capacity to recover from exposure to trauma the impact of heredity and the difference that environment can make and the centrality of primary attachment relationships Also discussed are the impact of bias and other issues affecting families of difference including lesbian and gay families

Concluding chapters consider promising future directions for training and research This is an important resource for social workers family therapists clinical psychologists psychiatrists and other professionals working with children and families as well as researchers and students in these fields It will serve as a text in advanced undergraduate and graduate level courses
