Technology And The Pursuit Of Economic Growth:

Technology and the Pursuit of Economic Growth David C. Mowery, Nathan Rosenberg, 1991-07-26 Technology's contribution to economic growth and competitiveness has been the subject of vigorous debate in recent years. This book demonstrates the importance of a historical perspective in understanding the role of technological innovation in the economy. The authors examine key episodes and institutions in the development of the U.S. research system and in the development of the research systems of other industrial economies. They argue that the large potential contributions of economics to the understanding of technology and economic growth have been constrained by the narrow theoretical framework employed within neoclassical economics. A richer framework, they believe, will support a more fruitful dialogue among economists, policymakers, and managers on the organization of public and private institutions for innovation. David Mowery is Associate Professor of Business and Public Policy at the School of Business Administration, University of California, Berkeley. Nathan S. Rosenberg is Fairleigh Dickinson Professor of Economics at Stanford University. He is the author of *Inside the Black Box: Technology and Economics* (CUP, 1983).

Technology and the Pursuit of Economic Growth David C. Mowery, Nathan Rosenberg, 1991. [The Hypersonic Revolution: The quest for the orbital jet, the National Aero-Space Plane Program, 1983-1995](#), 1998. **National Innovation Systems** Richard R. Nelson, 1993-06-03. The slowdown of growth in Western industrialized nations in the last twenty years, along with the rise of Japan as a major economic and technological power and enhanced technical sophistication of Taiwan, Korea, and other NICs, has led to what the authors believe to be a technological nationalism. This combines a strong belief that technological capabilities of a nation's firms are a key source of their competitive process with a belief that these capabilities are, in a sense, national and can be built by national action. This book is about these national systems of technical innovation. The heart of the work contains studies of seventeen countries, from large market-oriented industrialized ones to several smaller high-income ones, including a number of newly industrialized states as well. Clearly written, this work highlights institutions and mechanisms which support technical innovation, showing similarities, differences, and their sources across nations, making this work accessible to students as well as the scholars of innovation.

Technology, Management and Systems of Innovation Keith Pavitt, 1999-01-01. In this volume, Keith Pavitt assesses the economic impact of technological change and how it relates to public policy and corporate management practices.

Handbook of Technology Assessment Armin Grunwald, 2024-10-03. This Handbook provides a comprehensive overview of technology assessment (TA) practices, theories, methods, and cultures across the globe. Highlighting the significant influence of rapidly changing technology on human life and development, it examines diverse perspectives on how TA can be developed to better meet the challenges of the future. Information Technology has become symbolic of modernity and progress almost since its inception The nature and boundaries of IT have also meant that it has shaped or become embedded within a wide range of other scientific technological and economic developments Governments from the outset saw the computer as a strategic technology a keystone of economic development and an area where technology policy should be targeted This was true for those economies interested in maintaining their technological and economic leadership but also figured strongly in the developmental programmes of those seeking to modernise or catch up So strong was the notion that IT policy should be the centre of economic strategy that predominant political economic ideologies have frequently been subverted or distorted to allow for special efforts to promote either the production or use of IT This book brings together a series of country based studies to examine in depth the nature and extent of IT policies as they have evolved from a complex historical interaction of politics technology institutions and social and cultural factors In doing so many key questions are critically examined Where can we find successful examples of IT policy Who has shaped policy Who did governments turn to for advice in framing policy Several chapters outline the impact of military influence on IT What is the precise nature of this influence on IT development How closely were industry leaders linked to government programs and to what extent were these programs particularly

those aimed at the generation of national champions misconceived through undue special pleading How effective were government personnel and politicians in assessing the merits of programs predicated on technological trajectories extrapolated from increasingly complex and specialised information This book will be of interest to academics and graduate students of Management Studies History Economics and Technology Studies and Government and Corporate policy makers engaged with IT and Technology policy *Government Laboratory Technology Transfer* Sally Rood,2018-02-06 This title was first published in 2000 Due to budget cuts and competitiveness pressures determining the outcome of technology transfer from government R D laboratories to private industry and entrepreneurial start ups is of increasing interest This book presents a series of case studies of successful technology transfer by examining the same list of topics for each case It presents a format for analyzing the cases topic by topic a methodology that could be used by any R D laboratory The book also goes one step further and compares the cases that took place prior to national technology transfer legislation with those cases that took place after passage of such legislation An additional feature is the summary of existing attempts to measure and evaluate technology transfer This follows a background section on the technology policy context The analysis finds that there is a significant commercial impact from government laboratory transfer using this approach *Technology and Innovation for Sustainable Development* Rob Vos,2015-12-17 Continuation along current development pathways is not sustainable Available technology and production practices and the consumption patterns of modern societies are leading to global warming and ecological destruction Business as usual is not an option There is an urgent need to find a new development paradigm that ensures environmental sustainability while managing to provide now and in the future a decent livelihood for all of humankind In *Technology and Innovation for Sustainable Development* experts in the area provide a variety of insights about the technical transformation needed for sustainable development It spells out the behavioural and policy changes that would need to accompany the next technological transformation taking into account the complexity of inducing technological change in the energy and agricultural sectors The assessment suggests that this will require major but doable improvements in national innovation systems and major but affordable shifts in investment patterns and related macroeconomic adjustments **Technology and Innovation for Sustainable Development** Rob Vos,2015-12-17 This book is available as open access through the Bloomsbury Open Access programme and is available on bloomsburycollections.com Continuation along current development pathways is not sustainable Available technology and production practices and the consumption patterns of modern societies are leading to global warming and ecological destruction Business as usual is not an option There is an urgent need to find a new development paradigm that ensures environmental sustainability while managing to provide now and in the future a decent livelihood for all of humankind In *Technology and Innovation for Sustainable Development* experts in the area provide a variety of insights about the technical transformation needed for sustainable development It spells out the behavioural and policy changes that would need to accompany the next

technological transformation taking into account the complexity of inducing technological change in the energy and agricultural sectors The assessment suggests that this will require major but doable improvements in national innovation systems and major but affordable shifts in investment patterns and related macroeconomic adjustments
