Mechanisms to Enable Follow-On Innovation Alina Wernick, 2021-05-13 The patent system is based on one patent per product presumption and therefore fails to sustain complex follow on innovations that contain a number of patents The book explains that follow on innovations may be subject to market failures such as hold ups and excessive royalties For decades scholars have debated whether the market problems can be solved with voluntary licensing i e open innovation or with compulsory liability rules The book concludes that neither approach is sufficient On the one hand incentives to engage in open innovation practices involving patents are insufficient On the other hand the existing compulsory liability rules in patent and competition law are not tailored to address follow on innovator s interests To transcend this problem the author proposes a compulsory liability rule against the suppression of follow on innovation that

paradoxically fosters early on voluntary licensing between patent holders and follow on innovators The book is aimed at patent and competition law scholars and practitioners patent attorneys managers engineers and economists who either engage in open innovation involving patents or conduct research on the topic It also offers insights to policy and law makers reviewing the possibilities to foster open innovation initiatives or adapt the scope of patent remedies or employ compulsory licenses for patents
