Jimenez-Arias, 2008-05 Here s the dilemma while traditional agricultural systems appear to be unsustainable due to their environmental impact transgenic production seems to be a solution that could help us to make agricultural production more sustainable This work attempts to clarify some of the concepts such as the Precautionary Principle that seems to govern many field of scientific research especially transgenic crops and ultimately human development Now more than ever before we have to face ethical challenges arising from scientific and technological developments The genomic intervention by humans in plants animals and microorganisms involves risks for them and consequently for humankind On the other hand if people did not interfere in the genome of these living beings human survival could be jeopardized and the environment could be further damaged When assessing the risks of human intervention in other living organisms it is also essential to explore the risk of not intervening As we develop this issue further one essential question arises what offers greater risk intervention or non intervention Safe food drinking water and unpolluted air are basic human needs but if they are contaminated they can also become hazardous to human and animal health The paradox is that the lack of precautionary guidelines and actions can result in irreversible or serious damage to ecosystems and human health Similarly the erroneous application of precautionary measures based on suspected risk might also result in these same problems In this book we will explore fields such as agriculture human health people s effect on the environment and the resulting effect of the environment on humans In order to explore these areas this book is divided into four chapters The first chapter is on the origin of the Precautionary Principle PP the political and social need for a new concept to stop environmental damage The second chapter presents the search for solutions to humankind s nutritional problems The third chapter covers the environment the ecosystem biodiversity air pollution and the ethical debate on humans and their relationship with the environment Finally the last chapter of this book presents the most relevant issues that arise from the PP **General Foreign Policy Series** ,1973 **The Department of State Bulletin** ,1972 **United States Foreign Policy, 1972** United States.
