### **Introduction**

Deploying municipal camera systems has catalyzed several debates and even violent reactions in major cities around the world. This has everything to do with the increasingly advantageous capabilities of these cameras and other 'smart city' technologies, including AI-enhanced data collection and analytics possibilities associated with the Internet of Things (D'Ignazio & Klein, 2020; Buccolatto, 2020; Shaffer, 2021). These cameras promise functionality and cost savings for municipalities, but also surveillance opportunities for government authorities. In Hong Kong, for example, smart streetlights have been attacked out of concern over their surveillance capabilities; in the US, when publics become aware of these systems, concern and outrage sometimes have erupted. In the US, only a few cities have policies regarding these technologies (Chivukula & Takemoto, 2021). Matters of citizen independence and algorithmic bias lack robust discussion in many smart cities initiatives.

### **Research approach**

To investigate the theoretical and political implications of city-deployed camera systems, we examine infrastructure adoption and public engagement practices in seven US cities exercising varied approaches. While this design sacrifices the insights available from other countries' experiences, it provides a culturally and legislatively cohesive set of cases. Our research is multi-site and multi-method, combining case studies with results from a Delphi survey of US experts with 'smart cities' experience.

*Why Democracies Need Science* Harry Collins,Robert Evans,2017-03-27 We live in times of increasing public distrust of the main institutions of modern society Experts including scientists are suspected of working to hidden agendas or serving vested interests The solution is usually seen as more public scrutiny and more control by democratic institutions experts must be subservient to social and political life In this book Harry Collins and Robert Evans take a radically different view They argue that rather than democracies needing to be protected from science democratic societies need to learn how to value science in

this new age of uncertainty By emphasizing that science is a moral enterprise guided by values that should matter to all they show how science can support democracy without destroying it and propose a new institution The Owls that can mediate between science and society and improve technological decision making for the benefit of all
