Technologys Future:

The Future of Technology Tom Standage, 2005-08-01 From the industrial revolution to the railway age through the era of electrification the advent of mass production and finally to the information age the same pattern keeps repeating itself An exciting vibrant phase of innovation and financial speculation is followed by a crash after which begins a longer more stately period during which the technology is actually deployed properly This collection of surveys and articles from The Economist examines how far technology has come and where it is heading Part one looks at topics such as the greying maturing of IT the growing importance of security the rise of outsourcing and the challenge of complexity all of which have more to do with implementation than innovation Part two looks at the shift from corporate computing towards consumer technology whereby new technologies now appear first in consumer gadgets such as mobile phones Topics covered will include the emergence of the mobile phone as the digital Swiss Army knife the rise of digital cameras which now outsell film based ones the growing size and importance of the games industry and its ever closer links with other more traditional parts of the entertainment industry and the social impact of technologies such as text messaging Wi Fi and camera phones Part three considers which technology will lead the next great phase of technological disruption and focuses on biotechnology energy technology and nanotechnology

Select Committee on Science and Technology, 2015 In its broadest sense biometrics is the measurement and analysis of a biological characteristic fingerprints iris patterns retinas face or hand geometry or a behavioural characteristic voice gait or signature Biometric technologies use these characteristics to identify individuals automatically Unlike identity documents or passwords biometrics cannot be lost or forgotten since they are a part of the user and are always present at the time of identification They are also difficult though not impossible to forge or share Three future trends in the application of biometrics were identified during the inquiry i the growth of unsupervised biometric systems accessed via mobile devices which verify identity ii the proliferation of second generation biometric technologies that can authenticate individuals covertly iii and the linking

of biometric data with other types of big data as part of efforts to profile individuals Each of these trends introduces risks and benefits to individuals to the state and to society as a whole They also raise important ethical and legal questions relating to privacy and autonomy The Committee are not convinced that the Government has addressed these questions nor are they satisfied that it has looked ahead and considered how the risks and benefits of biometrics will be managed and
