Discographies Jeremy Gilbert, Ewan Pearson, 2002-03-11 Experiencing disco hip hop house techno drum n bass and garage Discographies plots a course through the transatlantic dance scene of the last last twenty five years It discusses the problems posed by contemporary dance culture of both academic and cultural study and

finds these origins in the history of opposition to music as a source of sensory pleasure. Discussing such issues as technology, club space, drugs, the musical body, gender, sexuality, and pleasure, *Discographies* explores the ecstatic experiences at the heart of contemporary dance culture. It suggests why politicians and agencies as diverse as the independent music press and public broadcasting should be so hostile to this cultural phenomenon. *Electronic Media and Technoculture* John Thornton Caldwell, 2000. Never before has the future been so systematically envisioned, aggressively analyzed, and grandly theorized as in the present rush to cyberspace and digitalization. In the mid twentieth century, questions about media technologies and society first emerged as scholarly hand-wringing about the deleterious sweep of electronic media and information technologies in mass culture. Now questions about new technologies and their social and cultural impact are no longer limited to intellectual soothsayers in the academy but are pervasive parts of day-to-day discourses in newspapers, magazines, television, and film. *Electronic Media and Technoculture* anchors contemporary discussion of the digital future within a critical tradition about the media, arts, society, and culture. The collection examines a range of phenomena from boutique cyber practices to the growing ubiquity of e-commerce and the internet. The essays chart a critical field in media studies, providing a historical perspective on theories of new media. The contributors place discussions of producing technologies in dialogue with consuming technologies, new media in relation to old media, and argue that digital media should not be restricted to the constraining public discourses of either the computer, broadcast motion picture, or internet industries. The collection charts a range of theoretical positions to assist readers interested in new media and to enable them to weather the cycles of hardware obsolescence and theoretical volatility that characterize the present rush toward digital technologies. Contributors include Ien Ang, John Caldwell, Cynthia Cockburn, Helen Cunningham, Hans Magnus Enzensberger, Guillermo Gmez Pea, Arthur Kroker, Bill Nichols, Andrew Ross, Ellen Seiter, Vivian Sobchack, Allucqure Rosanne Stone, Ravi Sundaram, Michael A. Weinstein, Raymond Williams, and Brian Winston. John Thornton Caldwell is chair of the film and television department at the University of California at Los Angeles. He is a filmmaker and media artist and author of *Televisuality: Style, Crisis, and Authority in American Television*, also from Rutgers University Press.

**Representations of the Post/human** Elaine L. Graham, 2002. This work draws together a wide range of literature on contemporary technologies and their ethical implications. It focuses on advances in medical, reproductive, genetic, and information technologies. *Modernity and Technology* Thomas J. Misa, Philip Brey, Andrew Feenberg, 2003. The book is divided into three parts. *Changing Life* Peter J. Taylor, Saul E. Halfon, Paul N. Edwards, 1997. In laboratories all over the world, life even the idea of life is changing. And with these changes, whether they result in square tomatoes or cyborgs, come transformations in our social order, sometimes welcome, sometimes troubling. *Changing Life* offers a close look at how the mutable forms and concepts of life link the processes of science to those of information, finance, and commodities. These essays about planetary management and genome sequencing, ecologies, and cyborgs address actual and imagined transformations at the center and at the margins of

transnational relations during the post Cold War era and in times to come      *Cyberpunk and Cyberculture* Dani Cavallaro,2000 This text explores and analyses the work of a wide range of writers setting their work in the context of science fiction other literary genres genre cinema and contemporary work on the culture of technology      *Marxism and Media Studies* Mike Wayne,2003-07-20 This is an accessible guide to key Marxist concepts and how to apply them to contemporary cultural analysis Drawing on Marx Lukacs Gramsci Habermas Jameson and others the book retools and redeems key concepts such as class the mode of production culture industries the state base superstructure ideology hegemony knowledge and social interests and commodity fetishism It also includes analysis of film television the internet and print media Using case studies including Disney Big Brother to the spirits and spectres in such films as The Others The Devil s Backbone and Dark City it illuminates the fetishisms of culture and society under capital Exploring the relevance of each concept to understanding the media Wayne explains why Marxism is an important critical methodology for the media student to engage with He foregrounds the theoretical and political shifts that have led to its marginalisation in recent years and highlights how and why these trends are changing as once more people return to Marx and Marxism to understand the world around them      **Body Fascism** Brian Pronger,2002-01-01 Brian Pronger argues that a technological approach to fitness transforms more than the body s functions and contours it diminishes its transcendent power compelling it conform to a profoundly limited imagination of what the body can do      **The Blackwell Companion to Social Inequalities** Mary Romero,Eric Margolis,2008-04-15 The Blackwell Companion to Social Inequalities is a first rate collection of social science scholarship on inequalities emphasizing race ethnicity class gender sexuality age and nationality Highlights themes that represent the scope and range of theoretical orientations contemporary emphases and emerging topics in the field of social inequalities Gives special attention to debates in the field developing trends and directions and interdisciplinary influences in the study of social inequalities Includes an editorial introduction and suggestions for further reading      *Radio Modernism* Todd Avery,2016-12-05 Radio Modernism marries the fields of radio studies and modernist cultural historiography to the recent ethical turn in literary and cultural studies to examine how representative British writers negotiated the moral imperative for public service broadcasting that was crafted embraced and implemented by the BBC s founders and early administrators Weaving together the institutional history of the BBC and developments in ethical philosophy as mediated and forged by writers such as T S Eliot H G Wells E M Forster and Virginia Woolf Todd Avery shows how these and other prominent authors involvement with radio helped to shape the ethical contours of literary modernism In so doing Avery demonstrates the central role radio played in the early dissemination of modernist art and literature and also challenges the conventional assertion that modernists were generally elitist and anti democratic Intended for readers interested in the fields of media and cultural studies and modernist historiography this book is remarkable in recapturing for a twenty first century audience the interest fascination excitement and often consternation that British radio induced in its literary listeners
