Tectonic Essays E. B. Bailey, 1968 *Tectonics* Eldridge M. Moores, Robert J. Twiss, 2014-07-23 Deformation of the Earth's crust happens at a multitude of scales ranging from submicroscopic to planetary Tectonics explores structures and processes from regional to global differentiating itself from the material covered in most structural geology textbooks Moores and Twiss emphasize basic principles and methodologies of tectonics embracing the time honored perspective of using present processes to understand the past Comprehensive in scope and detail coverage includes the effects of plate motions and reconstructions and the resultant structures associated with active rift transform and subduction boundaries as well as triple junctions and collision zones deformations of both the ocean basins and the continents and orogenic belts Moores and Twiss present tectonics as an open ended field of study in which assumptions can be challenged and interpretations changed The authors emphasize the use of models as a means of understanding observations and putting them in context to maintain a distinction between what we know from observing the Earth and what we infer from interpretation **Tectonic Essays**

Edward Battersby Bailey, 1968 **Continental Tectonics and Mountain Building** Richard D. Law, 2010 The thematic set of 32 papers in this Special Publication celebrate the 100th anniversary of the 1907 Memoir on The Geological Structure of the North West Highlands of Scotland by placing the original findings in both historical and modern contexts and juxtaposing them against present day studies of deformation processes operating not only in the NW Highlands but also in other mountain belts

A Brief History of Geology Kieran D. O'Hara, 2018-04-19 Geology as a science has a fascinating and controversial history Kieran D O'Hara's book provides a brief and accessible account of the major events in the history of geology over the last two hundred years from early theories of Earth structure during the Reformation through major controversies over the age of the Earth during the Industrial Revolution to the more recent twentieth century development of plate tectonic theory and on to current ideas concerning the Anthropocene Most chapters include a short text box providing more technical and detailed elaborations on selected topics The book also includes a history of the geology of the Moon a topic not normally included in books on the history of geology The book will appeal to students of Earth science researchers in geology who wish to learn more about the history of their subject and general readers interested in the history of science

Tectonic Essays, Mainly Alpine Larry Bailey, E. B. Bailey, 1968-12 *Did Westward Subduction Cause Cretaceous-Tertiary Orogeny in the North American Cordillera?* Robert S. Hildebrand, 2009-01-01 Within the Sonora segment to the south break off magmatism was also prevalent Both the Canadian and Sonoran segments have abundant porphyry copper mineralization temporally and spatially associated with the break off magmas which suggests a genetic link between slab failure and porphyry copper mineralization By 53 Ma eastwardly dipping subduction of Pacific Ocean crust was generating arc magmatism on the amalgamated Cordilleran collision zone in both the Canadian and Sonoran segments Oceanic schists such as the Orocochia Pelona Ranges were formed in the ocean basin west of Rubia and accreted during

initiation of the new easterly dipping subduction zone A major transform fault called the Phoenix fault connects the Sevier fold thrust belt at the California Nevada border with that in eastern Mexico and separates the Great Basin and Sonoran segments It juxtaposes the Sierra Mojave Sonora block alongside the Transition Zone of the Colorado Plateau Cordilleran events affected the subsequent development of western North America For example the structural Basin and Range Province appears to coincide with the region where exotic allochthons sit atop North American crust in both the Great Basin and Sonoran segments Also within the triangular Columbia embayment large segments of Rubia appear to have escaped laterally during the Cordilleran orogeny to create a lithospheric hole that was later filled by basalt of the Columbia River and Modoc plateaux
