Snoke, 2009 Exposed crustal cross sections provide a unique direct view of continental crust and are a major source of insights into variations in lithologic and geochemical composition structural style metamorphism plutonism and rheology with progressive depth through the crust This volume provides a synthesis of crustal cross sections with a special emphasis on Phanerozoic sections from the western North American Cordillera supplemented by articles on lower and mid crustal sections through Proterozoic crust in North America and Australia and the classic crustal section of Fiordland New Zealand Many of the papers describe multidisciplinary research on crustal sections and include data from various combinations of structural analysis geochemistry geothermobarometry geochronology geophysics and other disciplines The volume also discusses common problems for the interpretation of crustal cross sections including how sections that expose deep crustal rocks are eventually exhumed and leading to the conclusion that there is no simple standard model for continental crust This volume will be useful to those interested in structural geology tectonics geodynamics regional geology petrology geochemistry isotope geology and geophysics Pub desc **The Nature of Southeast Alaska** Richard Carstensen, Bob Armstrong, Rita M. O'Clair, 2014-03-03 Unlike the standard nature guides that explain how to recognize common animals *Nature* stresses the web of interrelationships that link the regional flora and fauna This affectionate examination of some of North America's most spectacular surviving old growth forests will delight backpackers and armchair naturalists Los Angeles Times Book Review Everything you ever wanted to know about the flora and fauna of Southeast Alaska is contained in the third edition of this lively field guide to the natural world from bears to banana slugs mountains to murrelets The authors who are both Alaskan residents and biologists combine scientific research with personal experiences to make a definitive field guide for residents of or visitors to Southeast Alaska The unique features of the book include In depth information about how wildlife coexists with the environment Detailed discussions of mammals birds fish invertebrates fungi and plants Detailed map of wilderness

areas in Southeast Alaska More than 200 black and white illustrations A bibliography list of common and scientific names and an index New to this edition More than 100 new illustrations many never before published as well as new maps and photos Major expansion of sections on geology old growth forests marine mammals and amphibians Fifty two new sidebars written in the first person to give the text a more personal touch that describe recent findings or experiences Sweeping updates and elaborations to chapter narratives often thanks to technology unknown in 1992 In depth guide to Southeast Alaska s flora and fauna more than an identification manual Nature explores how the species and habitats encountered in the woods and waters of Southeast Alaska fit into the bigger picture

Architecture and Evolution of the Crust during Continental Arc Magmatism Glenn J. Woodsworth, Margaret E. Rusmore, Harold H. Stowell, Lincoln S. Hollister, 2020-07-06 Originally prepared for the GSA Thompson Field Forum that ran from Terrace to Prince Rupert British Columbia this guide describes the geology along the Skeena River transect of the Coast Mountains batholith the largest Cordilleran batholith of western North America and one of the largest continental margin batholiths in the world The last guide to this area was published in 1983 and this new volume is the only modern overview of the last decades of work The authors use the transect as a basis to examine the growth of the Coast Mountains batholith as a whole emphasizing commonalities and variations with the batholith and how these traits may reflect magmatic processes that create convergent margin batholiths Provided by publisher

[The Tectonic Setting and Origin of Cretaceous Batholiths within the North American Cordillera](#) Robert S. Hildebrand, Joseph B. Whalen, 2017-10-03 In this Special Paper Hildebrand and Whalen present a big picture paradigm busting synthesis that examines the tectonic setting temporal relations and geochemistry of many plutons within Cretaceous batholithic terranes of the North American Cordillera In addition to their compelling tectonic synthesis they argue that most of the batholiths are not products of arc magmatism as commonly believed but instead were formed by slab failure during and after collision They show that slab window and Precambrian TTG suites share many geochemical similarities with Cretaceous slab failure rocks Geochemical and isotopic data indicate that the slab failure magmas were derived dominantly from the mantle and thus have been one of the largest contributors to growth of continental crust The authors also note that slab failure plutons emplaced into the

epizone are commonly associated with Cu Au porphyries as well as Li Cs Ta pegmatites

The Geology of Washington and Beyond Eric Swenson Cheney, 2015-12-01 The 20 chapters of *The Geology of Washington and Beyond* an outgrowth of a geologic symposium present the substantial advances in recent research on the geologic history of Washington State The 32 contributors used new conceptual developments such as sequence stratigraphy identification and matching of terranes and neotectonics as well as breakthroughs in technology such as lidar mapping paleomagnetism and new methods of radiometric dating to examine the fascinating geology of Washington State and beyond Also included is geologic mapping in areas previously known only by reconnaissance This book will influence resource management decisions as well as disaster and land use planning in the region The introductory chapters make the book accessible for undergraduate courses in geology and to the general public

Geological Survey of Canada, Current Research (Online) no. 2002-A12, *Tectonic Growth of a Collisional Continental Margin* Kenneth D. Ridgway, 2007 The convergent margin of southern Alaska is considered one of the type areas for understanding the growth of continental margins through collisional tectonic processes Collisional processes that formed this margin were responsible for multiple episodes of sedimentary basin development subduction complex growth magmatism and deformation Two main collisional episodes shaped this Mesozoic Cenozoic continental margin The first event was the Mesozoic collision of the allochthonous Wrangellia composite terrane This event represents the largest addition of juvenile crust to western North America in the past 100 m.y. The second event is the ongoing collision of the Yakutat terrane along the southeastern margin of Alaska This Cenozoic event has produced the highest coast mountain range on Earth Saint Elias Mountains the Wrangell continental arc and sedimentary basins throughout southern Alaska Active collisional processes continue to shape the southern margin of Alaska mainly through crustal shortening and strike slip deformation large magnitude earthquakes and rapid uplift and exhumation of mountain belts and high sedimentation rates in adjacent sedimentary basins This volume contains 24 articles that integrate new geophysical and geologic data including many field based studies to better link the sedimentary structural geochemical and magmatic processes that are important for understanding the development of collisional continental margins Publisher's website

Mesozoic Assembly of the North American Cordillera Robert S. Hildebrand, 2013-01-01 In this well illustrated book Hildebrand expands upon his model for the development of the North American Cordillera detailed in Special paper 457 Starting with an overview of Cordilleran geology he goes on to provide an in depth look at how the Rubian ribbon continent was assembled He integrates the complex

geology of the Cordillera into an actualistic model involving arc magmatism arc continent collision slab failure magmatism and transcurrent motion in both Rubia and the western North American margin While much of the focus is on the assembly of the Rubian ribbon continent Hildebrand explores its interactions with North America during the Sevier and Laramide events and concludes that North America was the lower plate in both Provided by publisher [The Sedimentary Basins of the United States and Canada](#) Andrew Miall,2019-04-20 The Sedimentary Basins of the United States and Canada Second Edition focuses on the large regional sedimentary accumulations in Canada and the United States Each chapter provides a succinct summary of the tectonic setting and structural and paleogeographic evolution of the basin it covers with details on structure and stratigraphy The book features four new chapters that cover the sedimentary basins of Alaska and the Canadian Arctic In addition to sedimentary geologists this updated reference is relevant for basin analysis regional geology stratigraphy and for those working in the hydrocarbon exploration industry Features updates to existing chapters along with new chapters on sedimentary basins in Alaska and Arctic Canada Includes nearly 300 detailed full color paleogeographic maps Written for general geological audiences and individuals working in the resources sector particularly those in the fossil fuel industry *Jurassic Magmatism and Tectonics of the North American Cordillera* David M.
