*Tectonics of the Nanga Parbat Syntaxis and the Western Himalaya* Geological Society of London, 2000      *Tectonics of the Western Himalayas* Lawrence L. Malinconico, Robert J. Lillie, 1989 Papers from a symposium held in San Antonio Texas 1986 Contributors consider problems of crustal and lithospheric scales in this area Contains a folded map of the Salt Range Pakistan Annotation copyright Book News Inc Portland Or      Neotectonism in the Indian Subcontinent K.S. Valdiya, Jaishri Sanwal, 2017-11-16 An erudite work on tectonic resurgence in Late Quaternary time of the Indian subcontinent embracing India Pakistan Nepal Bhutan and Bangladesh Neotectonism in the Indian Subcontinent dwells on the causes and consequences of tectonic events that fashioned the landscape of a land characterized by a fragmented framework The narratives on the structural and geomorphic developments during the morphogenic phase of the geodynamic history of the Indian subcontinent explain many phenomena These include the tremendous height and spectacular structural geomorphic architecture of the Himalaya and the behaviour of wayward rivers in the sinking and rising Indo Gangetic Plains In addition are the shifting deflection piracy and even disappearance of rivers and streams in the dry desertic terrane of western India as well as the unique drainage pattern of the ruptured and rifted plateaus and coastal belts of Peninsular India The formation of huge lakes due to river ponding in the stable continental shield in Karnataka is also explained All of these phenomena are accompanied by profuse illustrations Neotectonism in the Indian Subcontinent portrays the evolution of the extraordinary landforms and landscapes of the subcontinent constituted by multiple terranes of contrasted lithostructural architecture and distinctive geomorphic layout each with an altogether different geological history It chronicles events of crustal unrest or tectonic turmoil manifested as displacement subsidence and uplift of the ground with bizarre drainage changes and episodic seismicity This book caters to planners engineers and hazard managers but also satisfies the curiosity of those who are interested in understanding the formation of the Indian subcontinent Identifies areas and belts recurrently ravaged by geological hazards resulting from neotectonic activities Provides a wealth of information on neotectonic movements and consequent modification of landscape drainage aberrations and ground vulnerability including references that also provide additional resources for those who seek to pursue comprehensive investigations Includes much new observation and refreshing interpretation to explain many of the striking landforms of the region      Treatise on Geomorphology ,2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this

Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic. Information on the historical development of diverse topics within geomorphology provides context for ongoing research, discussion of research strategies, equipment and field methods, laboratory experiments and numerical simulations, reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research. Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces. This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students/researchers will find useful. Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field. Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding. Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QGG section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field. A host of noted international geomorphologists have contributed state of the art chapters to the work. Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself. No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece. From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science, no stone has been left unturned.

**Precambrian Geotectonics in the Himalaya** B.K. Chakrabarti, 2023-06-22

Precambrian Geotectonics in the Himalaya provides a deep overview on geology and tectonics of the Precambrian domains of the Himalaya. Authored by an expert with over five decades of work in Precambrian Himalaya, the book studies Window zones to provide a scope for understanding Precambrian deformation effects. The book specifically covers the holistic Precambrian geotectonic of the terrain and revises the subduction back thrusting model of the Cenozoic evolution. Considering Precambrian regional events are not clearly recognised or visualised in many sectors due to overlapping crystallines, this book details a Precambrian geotectonic framework of the terrain on which the Himalayan event evolved. Precambrian Geotectonics in the Himalaya is a necessary reference for Earth scientists, exploration and hazard management scientists, professors and students who carry out research that requires a comprehensive picture of the Precambrian Himalaya and in totality with the adjacent peninsula. Features comprehensive data gathered from decades of research on the Himalaya.

Includes numerous detailed case studies that allow readers to comprehensively consider the data presented Describes the Precambrian tectonostratigraphic history of the Himalayan terrain Encyclopedia of Snow, Ice and Glaciers Vijay P. Singh, Pratap Singh, Umesh K. Haritashya, 2011-06-29 The earth's cryosphere which includes snow glaciers ice caps ice sheets ice shelves sea ice river and lake ice and permafrost contains about 75% of the earth's fresh water It exists at almost all latitudes from the tropics to the poles and plays a vital role in controlling the global climate system It also provides direct visible evidence of the effect of climate change and therefore requires proper understanding of its complex dynamics This encyclopedia mainly focuses on the various aspects of snow ice and glaciers but also covers other cryospheric branches and provides up to date information and basic concepts on relevant topics It includes alphabetically arranged and professionally written comprehensive and authoritative academic articles by well known international experts in individual fields The encyclopedia contains a broad spectrum of topics ranging from the atmospheric processes responsible for snow formation transformation of snow to ice and changes in their properties classification of ice and glaciers and their worldwide distribution glaciation and ice ages glacier dynamics glacier surface and subsurface characteristics geomorphic processes and landscape formation hydrology and sedimentary systems permafrost degradation hazards caused by cryospheric changes and trends of glacier retreat on the global scale along with the impact of climate change This book can serve as a source of reference at the undergraduate and graduate level and help to better understand snow ice and glaciers It will also be an indispensable tool containing specialized literature for geologists geographers climatologists hydrologists and water resources engineers as well as for those who are engaged in the practice of agricultural and civil engineering earth sciences environmental sciences and engineering ecosystem management and other relevant subjects **Tectonics and**
