Telecommunications Liberalized Services

Mitchell P. Smith

Telecommunications Liberalized Services:

Approaches to Liberalizing Services Sherry Stephenson, 1999 Discusses various approaches to the liberalization of trade in services adopted by developing countries at the regional and sub regional levels and the treatment of services within two broader integration movements in the Asia Pacific region and the Western hemisphere *Competition Problems in Liberalized Telecommunications* Milena Stoyanova, 2008-01-01 This innovative study of the role of competition law in the telecommunications industry starts from a classic perspective While in principle regulation benefits social welfare and efficient allocation of resources past regulatory experience shows that regulation can be flawed and lead to welfare harm rather than good In the telecommunications industry specifically inappropriately designed sector specific remedies and regulatory delays in the introduction of new telecommunications services can hold up the development of the market towards effective competition and could incur considerable welfare losses In addition conventional antitrust analysis still lags behind the dynamic nature of the electronic communications markets Milena Stoyanova sets out to establish a new understanding of the role of sector specific regulation and competition law enforcement in the electronic communications sector addressing such questions as the following and Why a new regulatory framework and Are sectoral regulation and competition law enforcement mutually exclusive or complementary and Why should electronic communications markets be regulated to conform to competition law principles and What does competition law add to sector specific regulation and What is the relationship or proportion between regulation and competition law enforcement An overview of the telecommunications liberalization process initiated at European Community level reveals such problems as a divergent approach of national regulatory authorities in the application of one and the same norms inability of competition authorities to rightly assess the technicalities underlying a competition problem and difficulty in carrying out a periodical oversight of compliance with the competition law remedies The author discusses the legal basis and rationale for the application of the essential facility doctrine to the electronic communications sector and argues for new regulatory responses to the emergence of collective dominant firms in an oligopolistic setting and to the potential of multifirm conduct to restrict competition through price squeezing and other tactics The book concludes with a specific case study on the harmonisation of recent Bulgarian legislation with the European Community sector specific and competition law regimes and proposes the electronic communications sector Effective competition in the electronic communications market is crucial for securing the dynamic role of the entire information and communications technologies sector of which electronic communications form the largest segment The sound and well informed recommendations in this book ably address common and persistent problems making *Competition Problems in Liberalized Telecommunications* a forward looking mainstay for practitioners and other professionals involved in all aspects of the field *From Telecommunications Liberalization to Net Neutrality Rules* Simon P. Rinas, 2021-04-26 EU communications policy has massively changed due to both global competition on the ICT market and

technological developments that led to the emergence of Internet technology This book analyzes the structural and procedural transformation processes inside the EU legislative processes and concludes that EU communications policy struggles to reflect today's internet enabled communications reality It provides insights in the institutional conditions that maintained specific patterns of EU communications policy since the beginning of telecommunications regulation and concludes with an outlook on the technological and regulatory challenges ahead Telecommunications Equipment, 1998

Bundling Telecommunications Services Jan Krämer, 2009 With the advent of digital convergence incumbent telephone and cable companies have begun to offer their services such as voice telephony Internet and TV in so called triple play packages While carefully recognizing the technological legal and economic framework of the fixed line telecommunications industry this book investigates whether bundling is indeed a profitable pricing strategy for the firms and if it can possibly facilitate the leverage of market power into neighboring markets **Telecommunications Liberalization**

on Two Sides of the Atlantic Martin Cave, Robert W. Crandall, 2004-06-23 A Brookings Institution Press and American Enterprise Institute publication The 1990s witnessed a major revolution in telecommunications policy in North America and Europe The electronics revolution swept the world and most countries began to realize that they could not compete in many markets without a vibrant competitive telecommunications sector As a result the European Union Canada and the United States launched major new liberalization policies aimed at opening all telecommunications markets to competition This report presents two views of the progress towards competition one for North America and one for Europe The authors provide an overview of the market structure on both continents prior to the 1990s discuss significant regulatory changes during that decade and analyze changes in rate structures and competition that have occurred since liberalization They conclude with a look at the present and future impact of the Internet and other new technologies on the telecommunications industry **National Regulation and Trade Liberalization in Services**

Markus Krajewski, 2003-01-01 Like tariffs and other border measures national regulatory barriers impede international trade Unlike tariffs however such barriers usually indicate an important domestic policy choice This conflict of interest has emerged as a crucial issue in international law particularly with regard to services such as telecommunications and health services This study is the first to analyze the potential impact of incompatibilities between national regulatory regimes and the rules and obligations imposed by the General Agreement on Trade in Services GATS In the process of arriving at his challenging concluding theses the author investigates such relevant concepts as the following the political and ideological dynamics of GATS negotiations services trade liberalization in regional integration systems particularly in EC law policies common to diverse national regulatory systems the notions of deregulation and privatization the human rights implications of international trade law the GATS obligations of market access national treatment and most favoured nation treatment the role of the WTO's dispute settlement organs GATS transparency obligations Professor Krajewski's study is of enormous significance to specialists in regulatory

policies and instruments at all national and sectoral levels especially in the context of ongoing GATS negotiations As the author warns Unless GATS negotiators and national regulators have a thorough understanding of the relationship between GATS obligations and regulatory policies and instruments they cannot effectively use the flexible elements of GATS and could reach an agreement which they may later regret *Liberalization and Regulation of the Telecommunications Sector in Transition Countries* Ekaterina Markova,2008-11-14 Telecommunications are increasingly recognized as a key component in the infrastructure of economic development For many years there were state owned monopolies in the telecommunications sector In transition economies they were characterized by especially poor performance and high access deficits as telecommunications were considered to be a non profit oriented production process intended to support the socio economic superstructures As a result the starting point for the reform processes in transition countries was quite poor performed public monopolies functioned under completely different circumstances as the peers in the market economies The main question of this book is what the strategies for the successful future development of the telecommunications sector in transition countries are The special focus is on Russia the largest of the transition countries Economic Liberalization and Turkey Sübidey Togan,2010-04-05 The liberalization of the Turkish economy is a key factor affecting Turkey s application to join the European Union This book examines the impact of economic liberalization in Turkey and Turkey s approach to the elimination of barriers to trade It focuses on the liberalization of trade in Turkey s agricultural and industrial commodities sector and key services such as telecommunications electricity natural gas banking and transport The chapters include thorough discussions on WTO and EU approaches for the elimination of barriers to trade international and EU rules and regulations in the various service sectors and the methods for estimating the tariff equivalents of barriers to trade in the different service sectors as well as methods for estimating the benefits of liberalization of services for Turkey The experience of Turkey its approach to liberalization and its measures to eliminate barriers to trade serve as a useful model for other neighboring countries of the European Union **Domestic Regulation and Service Trade Liberalization** Pierre Sauve,Aaditya Mattoo,2003-08-29 Trade in services far more than trade in goods is affected by a variety of domestic regulations ranging from qualification and licensing requirements in professional services to pro competitive regulation in telecommunications services Experience shows that the quality of regulation strongly influences the consequences of trade liberalization WTO members have agreed that a central task in the ongoing services negotiations will be to develop a set of rules to ensure that domestic regulations support rather than impede trade liberalization Since these rules are bound to have a profound impact on the evolution of policy particularly in developing countries it is important that they be conducive to economically rational policy making This book addresses two central questions What impact can international trade rules on services have on the exercise of domestic regulatory sovereignty And how can services negotiations be harnessed to promote and consolidate domestic policy reform across highly diverse sectors The book with contributions from several of the world s

leading experts in the field explores a range of rule making challenges arising at this policy interface in areas such as transparency standards and the adoption of a necessity test for services trade Contributions also provide an in depth look at these issues in the key areas of accountancy energy finance health telecommunications and transportation services

Competition Law and Regulation in European Telecommunications Pierre Larouche,2000-05-01 Using numerous practical examples this book examines the evolution of EC telecommunications law following the achievement of liberalisation the main policy goal of the 1990s After reviewing the development of regulation in the run up to liberalisation the author identifies the methods used to direct the liberalisation process and tests their validity in the post liberalisation context A critical analysis is made of the claim that competition law will offer sufficient means to regulate the sector in the future Particular emphasis is given to the way in which EC Competition Law changed in the 1990s using the essential facilities doctrine an expansive non discrimination principle and the policing of cross subsidisation to tackle what were then thought of as regulatory matters Also examined within the work is the procedural and institutional interplay between competition law and telecommunications regulation In conclusion Larouche explores the limits of competition law and puts forward a long term case for sector specific regulation with a precise mandate to ensure that the telecommunications sector as a whole fulfils its role as a foundation for economic and social activity

States of Liberalization Mitchell P. Smith,2012-02-01 As economic competition is introduced into areas formerly served by public sector monopolies to what extent do governments lose discretion over their use of the public sector States of Liberalization examines the impact of the European Union s rigorous single market competition policy on the abilities of Western European governments to use the public sector to achieve political objectives Examining several politically contentious sectors including government purchasing of goods and services postal services and public sector financial institutions Mitchell P Smith explores and explains the scope and the limits of this transformation While European economic integration and the application of European Community competition policy have substantially infused competition into public services the process has been more modest and more deliberate than a simple reading of Europe s potent market making mechanisms would predict

European Telecommunications Liberalisation Kjell A. Eliassen,Marit Sjøvaag Nfa,Marit Sjøvaag,2013-03-04 This book examines the process and consequences of telecommunications liberalisation in the context of an ever closer European Union The creation of a single market for telecommunications and of a wider European single market mirror one another Telecommunications are also something of a test case for the privatisation process as this sector has traditionally been a state monopoly The volume approaches the European experience from three angles the politics of regulation and the process of liberalisation in the EU including case studies of the UK France and Germany increasing global economic interdependence makes international comparisons essential and the volume compares the EU experience with that of the Czech Republic Israel and Thailand the consequences of technology and continuous innovation

U.S. Industrial Outlook ,1994 National Legal Systems and

Globalization Pierre Larouche, Péter Cserne, 2012-11-27 This book presents the results of research project financed by the Hague Institute for the Internationalization of Law HiiL and carried out at the Tilburg Law and Economics Center TILEC of Tilburg University The project team shows that globalization instead of threatening national legal systems put them in a new role and gives them continuing relevance First of all once one takes a more functional view of the law based on law and economics and comparative law literature harmonization or unification of national legal systems is no longer a foregone conclusion Secondly fundamental constitutional principles continue to bear in the era of multi level and transnational governance they become governance principles divorced from specific institutional settings Finally looking beyond regulatory competition and comparative law legal emulation provides a rich and fruitful model to explain the interplay between legal systems This book explores these three themes both at a theoretical level and in the light of specific examples U.S. *Industrial Outlook for ... Industries with Projections for ..*, 1994 *Globalization, Liberalization and Policy Change* S. McDowell, 1997-01-21 After the introduction of a new economic policy of 1991 India is increasingly portrayed as a big emerging market for consumer goods and for broadcasting and communications services Policies for telecommunications computer software and television broadcasting in India have also shifted fundamentally The book considers communications policies in light of the role of communications in social and economic development and global patterns of trade and investment in communications and services U. S. *Industrial Outlook, 1994*, 1994-02 Highlights U S industrial activities and features economic assumptions recent financial performance of U S manufacturing corporations the U S export boom and economic growth highlights of the 1993 U S outlook the top 50 trade events in 1993 Dept of Commerce competitive assessments industry reviews trade finance educational training and forecasts Also lists industry analysts by name with a phone number *International Handbook of Network Industries* Matthias Finger, R. W. Kanneke, 2011 To learn about how economic and institutional forces have shaped the network industries and policies towards them read the first part of the book To discover their impacts on particular industries read the second part And to find out what has happened in particular countries read the third part I think anyone interested in network industries should read all of it The book's structure allows for many interesting comparisons across countries and sectors Richard Green University of Birmingham UK This is a very useful and comprehensive guide to reforms in network industries in communications energy transport and water It is organized by generic topic sector and region Its authors are acknowledged experts I am confident that this Handbook will be a widely read and valuable resource for many years Martin Cave London School of Economics UK Quite an accomplishment this Handbook provides by far the most comprehensive overview of the role of the private sector and competition in infrastructure industries with thoughtful surveys of each of the major infrastructure sectors and of the key regions and countries Jos Gemez Ib ez Harvard University US In recent decades all infrastructures have undergone significant restructuring This worldwide phenomenon is often labelled liberalization and although expectations were high with respect

to lower prices greater efficiency and innovation the expected gains have not always been fully realized This extensive state of the art Handbook provides a comprehensive overview of the various experiences of liberalization across different sectors regions and disciplines The multidisciplinary approach focuses on the economic political and institutional aspects of liberalization as well as to a lesser extent on technological issues As such it constitutes a unique contribution as this broad overview is often lost in the sector specific country focused and purely disciplinary approaches prevalent in the current literature Sectors explored include telecoms the Internet energy and transport whilst the truly global perspective incorporates unique case studies from an array of developed and developing countries including the US China India and the EU The International Handbook of Network Industries will become the definitive volume for academics researchers and students of economics political science and law interested in infrastructure regulation It will also prove a valuable guide to practitioners and policy makers involved in liberalization and competition
