

HISTORY OF TELEPHONE NETWORKS

The Telephone Network was created around 70 years before the transistor was invented; This forces us to understand both the way in which computers and their interfaces interact with the network, as well as the telephones that worked in 1920, since in the evolution of the Telephone Network it was wanted for it to be compatible with the first devices, for example. Therefore, all new equipment must be compatible with the telephone network.

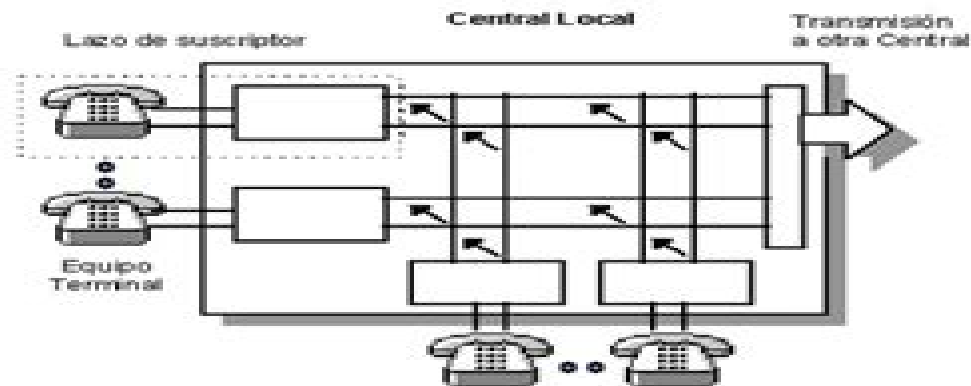

Illustration 1
(Diagram of a Local Exchange and its Subscribers)

The design of equipment to be connected to the telephone network is currently a difficult task. Despite its magnitude and complexity, it fulfills simple tasks for the user: starting with a pair of terminals to which the "subscriber" connects. These cables reach a Central, which interacts with the subscriber until establishing a conversation with another user through a switching matrix.

There is communication between exchanges through the "Trunks" prior to voice compression and multiplexing in time or frequency.

In the Telephone Exchange, there are 48 V direct current batteries, which power the terminal equipment connected to it. Depending on the distance between the subscriber and the exchange, the impedance of the DC line can vary between 400 to 1750 Ω , on the other hand; The AC impedance is around 600 Ω , which corresponds to the characteristic impedance of a two-wire cable, commonly used in telephony.

Military Communications John D. Bergen,1986 In *Military Communications A Test for Technology* John D Bergen develops the thesis that burgeoning technology in communications faced a severe test in Vietnam He analyzes the advantages and drawbacks of new communications systems and the effects these systems had on decision making and on command In doing so he describes the difficulties that communications systems had in keeping pace with the information explosion and shows that command and control do not necessarily improve with enhanced communications The book illustrates that the communications missions of getting the message through was not only critical to the success of combat operations but also as challenging as combat itself Bergens clear understanding and description of these issues make this a valuable work for those responsible for the future success of command control communications and intelligence
