## **Telenursing Nursing Practice In Cyberspace:**

**Telenursing** Charles C. Sharpe, 2000-11-30 This is the first book to explore this emergent role of the nursing profession. It examines the unique legal regulatory and professional issues this neoteric mode of nursing practice presents. Telenursing as a subset of telehealth is defined and a review of its history, present status and future in the U.S. health care system is discussed. Concomitant legal accountability and risk for malpractice liability are examined. Risk management strategies and survival tactics in the event of a lawsuit are presented, particularly the legal significance of and essential need for defensive nursing documentation. A brief overview of malpractice law is provided and the essentials of requisite malpractice insurance for the telenurse practitioner are outlined. The book also addresses a number of other professional regulatory and licensure issues, particularly the contentious issue of multistate licensing and the various models to facilitate it that are being offered and rejected by nursing organizations and associations. The anticipated changes in our health care delivery system that will be engendered by breakthroughs in science and technology are described. The implications of such changes for patients as consumers of health care are analyzed, particularly the privacy and confidentiality of electronic medical records.

**Telenursing** Sajeesh Kumar, Helen Snooks, 2011-07-09 Written by experts from around the globe (USA, Europe, Australia and Asia), this book explains technical issues, digital information processing and collective experiences from practitioners in different parts of the world practicing a wide range of telenursing applications, including telenursing research by professionals in the field. This book lays the foundations for the globalisation of telenursing procedures, making it possible to know that a nursing service could perform on a patient anywhere in the world.

**Health Informatics** Hironobu Matsushita, 2020-09-14 This book is the first to approach healthcare informatics from the perspective of innovation. Drawing on the unique pairing of information and innovation, it offers an analysis to help readers rethink information technology, knowledge management, interprofessional collaboration and the generation of wisdom in the context of healthcare. The concept of translational research stems from the medical and health sciences and features bidirectional and recursive information generation processes involving bed to bench and bench to bed approaches. Based partly on this translational systems science, has become a new trend within systems sciences motivated by the need for practical applications that help people by offering holistic systems solutions for complex ideas. Today numerous innovations are emerging in diversified clinical practices and there has been a remarkable convergence of new technologies in disciplines like genome therapy, immunotherapy, iPS cells, imaging, diagnosis, personalized medicine, molecular targeted drugs, surgical robots and remote nursing. Innovation is also occurring in health management fields including health records, insurance reimbursement methods, quality control and safety. In these areas, big data and machine learning are accelerating innovation. Behind these innovations are the creation, sharing, bridging and translation of data, information, knowledge and wisdom, and as such health informatics is critical in promoting health innovations. The book explores the horizons of health informatics, introducing cutting edge

practical cases and theoretical frameworks including but not limited to fields such as big data machine learning drug discovery interprofessional collaboration electronic health records robotics telenursing quality improvement and safety

Telehealth Nursing Dawna Martich, 2016-12-13 Including all of the information necessary for safe competent practice this is a practical hands on educational and training resource for nurses working in telephonic health care settings It delivers the requisite tools and instruction for optimizing patient communication performing assessments and providing effective care of chronic conditions Moving step by step from simple to complex information the resource demystifies the process of telephonic nursing care and describes numerous tools such as learning outcomes algorithms exercises to reinforce learning case studies and critical thinking questions that help readers develop and hone telehealth nursing skills The text instructs nurses on how to actively listen to the patient between the lines in the absence of an in person examination and discern the right questions to ask and tone to adopt Chapters provide enhanced communication techniques to perform comprehensive health assessments with only the sense of hearing and resources available through the telephone Clinical pearls are scattered throughout the text from those who have been in the trenches and cared for a wide variety of patients using the telehealth nursing techniques illustrated in this book Key Features Helps nurses understand the keys to successful telehealth nursing Teaches enhanced specialized communication techniques including active listening Guides nurses in assessing patients using only sense of hearing active listening Includes case studies algorithms patient teaching resources and more Reviews body systems and disease processes with application exercises

**Key Concepts and Issues in Nursing Ethics** P. Anne Scott, Shane M. Scott, 2024-11-15 This second edition offers updates new topics and new short case studies based on real stories from the health care arena ensuring that each chapter of this book is rooted in descriptions of nursing practice that are grounded salient narratives of nursing care The reader is assisted to explore the ethical dimension of nursing practice what it is and how it can be portrayed discussed and analysed within a variety of practice and theoretical contexts One of the unique contributions of this book is to consider nursing not only in the context of the individual nurse patient relationship but also as a social good that is of necessity limited due to the ultimate limits on the nursing and health care resource This book will help the reader consider what good nursing looks like both within the context of limitations on resources during crises situations and under conditions of scarcity Indeed any discussion of ethical issues in nursing should be well grounded in a conceptualisation of nursing that nursing students and practising nursing can recognise accept and engage with Nursing like medicine social work and teaching has a clear moral aim to do good In the case of nursing to do good for the patient However it is vital that in the pressurised constrained post COVID 19 pandemic health service of the 21st century we help nurses explore what this might mean for nursing practice and what can reasonably be expected of the individual nurse and the nursing profession in terms of good nursing care
