Modeling and Control of Antennas and Telescopes Wodek Gawronski, 2008-07-11 Mechanical engineering and engineering discipline born of the needs of the industrial revolution is once again asked to do its substantial share in the call for industrial renewal The general call is urgent as we face profound issues of productivity and competitiveness that require engineering solutions among others The Mechanical Engineering Series is a series featuring graduate texts and research monographs intended to address the need for information in contemporary areas of mechanical engineering The series is conceived as a comprehensive one that covers a broad range of concentrations important to mechanical engineering graduate education and research We are fortunate to have a distinguished roster of series editors each an expert in one of the areas of concentration The names of the series editors are listed on page vi of this volume The areas of concentration are applied mechanics biomechanics computational mechanics dynamic systems and control energetics mechanics of materials processing thermal science and tribology Preface This book is based on my experience with the control systems of antennas and radiotelescopes Overwhelmingly it is based on experience with the NASA Deep Space Network DSN antennas It includes modeling the antennas developing control algorithms field testing system identification performance evaluation and troubleshooting My previous book emphasized the theoretical aspects of antenna control engineering while this one describes the application part of the antenna control engineering

Setting-Up a Small Observatory: From Concept to Construction David Arditti, 2007-12-20 Arditti's approachable work covers all the details of design siting and construction once a basic type has been decided upon It is written in a way that is equally applicable to the USA and UK where there are slightly different building regulations and deals with matters that are basic to building and commissioning any amateur observatory Uniquely David Arditti also considers the aesthetics of amateur observatories fitting them in with family and neighbors and maybe disguising them as more common garden buildings if necessary Every amateur astronomer who wants a purpose built observatory and let's face it which one of them doesn't will find this book invaluable

Laser Guide Star Adaptive Optics for Astronomy N. Ageorges, C. Dainty, 2013-04-17 Adaptive optics allows the theoretical limit of angular resolution to be achieved from a large telescope despite the presence of turbulence Thus an eight meter class telescope such as one of the four in the Very Large Telescope operated by ESO in Chile will in future be routinely capable of an angular resolution of almost 0.01 arcsec compared to the present resolution of about 0.5 arcsec for conventional imaging in good condition All the world's major telescopes either have adaptive optics or are in the process of building AO systems It turns out that a reasonable fraction of the sky can be observed using adaptive optics with moderately good imaging quality provided imaging is done in the near IR To move out of the near IR with its relatively poor angular resolution astronomers need a laser guide star There is a layer of Na atoms at

approximately 90 km altitude that can be excited by a laser to produce such a source or Rayleigh scattering can be employed lower in the atmosphere But the production and use of laser guide stars is not trivial and the key issues determining their successful implementation are discussed here including the physics of the Na atom the cone effect tilt determination sky coverage and numerous potential astronomical applications

Instrumentation for Ground-Based Optical Astronomy Lloyd B. Robinson, 2012-12-06 Historically the discovery of tools or evidence that tools have been used has been taken as proof of human activity certainly the invention and spread of new tools has been a critical marker of human progress and has increased our ability to observe measure and understand the physical world In astronomy the tools are telescopes and the optical and electronic instruments that support them The use of the telescope by Galileo marked the beginning of a new and productive way to study and understand the universe in which we live The effects of this new tool on what we can see and how we see ourselves are well known However after almost four centuries of developing ever more sensitive and subtle instruments as tools for astronomy it might have been expected that only a few minor improvements would remain to be made or that possibly the law of diminishing returns would have taken effect On the contrary the new instruments and ideas for new instruments described in this book make it clear that the rate of progress has not diminished and that this subject is still as exciting and productive as ever

Instrumentation for Ground Based Optical Astronomy was chosen as the theme for the Ninth Santa Cruz Summer Workshop in Astronomy and Astrophysics

Hands-on Astronomy For Education - Proceedings Of The Workshop C Pennypacker, 1992-08-07 This workshop brought together the leaders in the field of education in astronomy and explored the newly available technologies that can make astronomy a powerful teaching tool for high school and undergraduate college students Techniques include the use of automated telescopes charge coupled devices and a personal computer for image

processing and data manipulation **Tools of Radio Astronomy** T. L. Wilson, Kristen Rohlfs, Susanne Hüttemeister, 2008-11-14 Four significant factors have led us to update this text. The first is the breathtaking progress in technology especially in receiver and digital techniques. The second is the advance of radio astronomy to shorter wavelengths and the increased availability of astronomical satellites. The third is a need to reorganize some of the chapters in order to separate the basic theory that seldom changes from practical aspects that change often. Finally it is our desire to enhance the text by including problem sets for each chapter. In view of this ambitious plan we have expanded the number of authors. In the reorganization of this edition we have divided Chap 4 of the 4th edition into two Chaps 4 and 5. The first remains Chap 4 with a slightly different title Signal Processing and Receivers Theory. This was expanded to include digital processing and components including samplers and digitizers. In Chap 5 Practical Receiver Systems we have relegated the presentations of maser and parametric amplifier front ends which are no longer commonly used as microwave receivers in radio astronomy to a short section on historical developments and. We have retained and improved the presentations of current state of the art devices cooled transistor and superconducting front ends. We have also included descriptions of local oscillators and phase lock loops. Chapters 5 and 6 in the 4th edition has now become Chap 6 Fundamentals of Antenna Theory and Chap

Electrical Power Systems and Computers Xiaofeng Wan, 2011-06-21 This volume includes extended and revised versions of a set of selected papers from the International Conference on Electric and Electronics EEIC 2011 held on June 20-22 2011 which is jointly organized by Nanchang University Springer and IEEE IAS Nanchang Chapter. The objective of EEIC 2011 Volume 3 is to provide a major interdisciplinary forum for the presentation of new approaches from Electrical Power Systems and Computers to foster integration of the latest developments in scientific research. 133 related topic papers were selected into this volume. All the papers were reviewed by 2 program committee members and selected by the volume editor Prof Xiaofeng Wan. We hope every participant can have a good opportunity to exchange their research ideas and results and to discuss the state of the art in the areas of the Electrical Power Systems and Computers **The NexStar User's Guide**

Michael Swanson, 2012-12-06 Michael Swanson's online discussions with literally thousands of NexStar owners made it clear that there was a desperate need for a book such as this one that provides a complete detailed guide to buying using and maintaining NexStar telescopes. Although this book is highly comprehensive it is suitable for beginners there is a chapter on Astronomy Basics and experts alike. Celestron's NexStar telescopes were introduced in 1999 beginning with their first computer controlled go to model a 5 inch. More models appeared in quick succession and Celestron's new range made it one of the two dominant manufacturers of affordable go to telescopes **Modern Solar Facilities - Advanced Solar Science** Franz Kneer, 2007 *New Trends in Astronomy Teaching* L. Gouguenheim, D. McNally, J. R. Percy, 1998-10 How do students learn astronomy? How can the World Wide Web be used to teach? And how do planetariums help with educating the public? These are just some of the timely questions addressed in this stimulating review of new trends in the teaching of astronomy.

Based on an international meeting hosted by the University of London and the Open University IAU Colloquium 162 this volume presents articles by experts from around the world The proceedings of the first IAU Colloquium 105 The Teaching of Astronomy edited by Percy and Pasachoff were first published in 1990 and soon became established as the definitive resource for astronomy teachers Astronomy education has advanced enormously in the intervening 7 years and this sequel will inspire and encourage teachers of astronomy at all levels and provide them with wealth of ideas and experience on which to build
