Prosody Martin Evertz, 2018-06-25 According to well established views language has several subsystems where each subsystem e.g. syntax morphology phonology operates on the basis of hierarchically organised units When it comes to the graphematic structure of words however the received view appears to be that linear structure is all that matters Contrary to this view a sub field of writing systems research emerges that can be called non linear or supra segmental graphematics Drawing on parallels with supra segmental phonology supra segmental graphematics claims the existence and relevance of cross linguistically available building blocks such as the syllable and the foot in alphabetical writing systems such as the writing systems of German and English This book explores the graphematic hierarchy with a special focus on the unit foot Structural experimental and databased evidence is presented in favour of this approach In addition analyses within the optimality theory framework are offered This work shows that the supra segmental graphematic approaches are superior to linear ones with respect to explanatory strength and even preciseness of the description It is thus interesting for academics concerned with writing systems and orthography teaching
