Chimenti, 2012-12-06 These Proceedings consisting of Parts A and B contain the edited versions of most of the papers presented at the annual Review of Progress in Quantitative Nondestructive Evaluation held at the University of Washington Seattle on July 30 to August 4 1995 The Review was organized by the Center for NDE at Iowa State University in cooperation with the Ames Laboratory of the USDOE the American Society of Nondestructive Testing the Department of Energy the National Institute of Standards and Technology the Federal Aviation Administration the National Science Foundation Industry/University Cooperative Research Centers and the Working Group in Quantitative NDE This year's Review of Progress in QNDE was attended by approximately 450 participants from the US and many foreign countries who presented over 375 papers The meeting was divided into 36 sessions with as many as four sessions running concurrently The Review covered all phases of NDE research and development from fundamental investigations to engineering applications or inspection systems and it included many important methods of inspection science from acoustics to x rays In the last several years the Review has stabilized at about its current size Most participants seem to agree it is large enough to permit a full scale overview of the latest developments but still small enough to retain the collegial atmosphere which has marked the Review since its inception The Proceedings are structured in a format to reflect the organization of the Review itself producing a more logical organization for both the meeting and the present volume      **Applied Mechanics Reviews** ,1976      **Fatigue of Structures and Materials** J.

Schijve, 2008-12-16 Fatigue of structures and materials covers a wide scope of different topics The purpose of the present

book is to explain these topics to indicate how they can be analyzed and how this can contribute to the designing of fatigue resistant structures and to prevent structural fatigue problems in service Chapter 1 gives a general survey of the topic with brief comments on the significance of the aspects involved This serves as a kind of a program for the following chapters The central issues in this book are predictions of fatigue properties and designing against fatigue These objectives cannot be realized without a physical and mechanical understanding of all relevant conditions In Chapter 2 the book starts with basic concepts of what happens in the material of a structure under cyclic loads It illustrates the large number of variables which can affect fatigue properties and it provides the essential background knowledge for subsequent chapters Different subjects are presented in the following main parts Basic chapters on fatigue properties and predictions Chapters 2 8 Load spectra and fatigue under variable amplitude loading Chapters 9 11 Fatigue tests and scatter Chapters 12 and 13 Special fatigue conditions Chapters 14 17 Fatigue of joints and structures Chapters 18 20 Fiber metal laminates Chapter 21 Each chapter presents a discussion of a specific subject
