Special Care Babies And Their Developing Relationships:

Special Care Babies and their Developing Relationships Dr Anne Mcfadyen, 2019-10-25 Special care babies are at the centre of a complex system of relationships involving both family members and professionals. Prematurity, disability and life threatening situations create a crisis which is likely to have a different meaning for each participant. Each baby's developing relationships will both influence and be influenced by relationships within the hospital and the family system. **Special Care Babies and their Developing Relationships** puts professionals in touch with how babies, their parents and the staff who care for them actually experience neonatal care. The book explores institutional, cultural and family beliefs about prematurity and considers the differences in beliefs and in needs of parents and staff. Anne McFadyen argues that to support the key mother-child relationship, these differences must be acknowledged as they are at the heart of the relationship between two crucial systems which have the power to influence the baby's survival and the rest of his or her life.

Therapeutic Approaches with Babies and Young Children in Care Jenifer Wakelyn, 2019-07-10 **Therapeutic Approaches for Babies and Young Children in Care** Observation and Attention is about the value of observation and close attention for babies and young children who may be vulnerable to psychological and attachment difficulties. Case studies explore the potential for observation-based therapeutic approaches to support caregivers, social workers and professional networks. A third theme in the book is the roots of observation-based approaches in psychoanalytic infant observation and the contribution of these ways of working to professional training and continuing development. Using case examples, Jenifer Wakelyn illustrates observational ways of working that can be practised by professionals and family members to help children express themselves and feel understood. The interventions focus on the early stages of life in care and on the golden thread of relationships with caregivers. The book explores contemporary neuroscience and child development research alongside psychoanalytic theory to explore the role of attention in helping children to develop the internal continuity that sustains the personality and protects against the fragmenting impact of trauma. **Therapeutic Approaches for Babies and Young Children in Care** is written for social workers, teachers, medical staff and other professionals whose work brings them in contact with the youngest children in care; it will also be relevant for commissioners, managers and trainers as well as mental health clinicians who are starting to work with children in care. It will provide a valuable insight into the lives of infants and young children in the care system and the applications of psychoanalytic infant observation.

Each chapter is the work of an experienced child psychotherapist or child analyst, vivid in their description of the children and families they encountered. Their understanding of the inner worlds of patients and the clinical consulting room is clearly evidenced in their analysis of clinical presentations. The chapters are the result of the psychoanalytic clinical and observational practices of their authors, allied to their use of rigorous qualitative research methods in particular: Grounded Theory and interpretative phenomenological analysis (IPA). They describe developments of child psychoanalytic knowledge in several fields, including autism, psychotherapy with severely deprived children and the study of early infancy. They demonstrate advances in child psychoanalytic theories and methods and the development of new forms of clinical service provision. Contested issues in psychoanalytic research are thoroughly evaluated, showing how it can be made more accountable and rigorous through the adaptation of established qualitative research methods to the study of unconscious mental phenomena. **New Discoveries in Child Psychotherapy** will be an essential text in the field of child psychoanalysis and will be highly useful in psychotherapy and psychoanalysis training courses and for psychoanalytic researchers as well as for practitioners. **The Developing Person Through Childhood** Kathleen Stassen Berger, 2005-10-14.
