Nontimber forest products from southern Alaska also called special forest products have been used for millennia as resources vital to the livelihoods and culture of Alaska Natives and more recently as subsistence resources for the welfare of all citizens Many of these products are now being sold and Alaskans seek additional income opportunities through sustainable harvest and manufacture of such forest resources We discuss the unique legal regulatory land tenure geographic vegetation and climatic context that southern Alaska presents for marketing nontimber forest products summarize the various species and types of products being harvested and consider the marketing challenges and opportunities new entrepreneurs will encounter The information and resources we provide are intended to enhance income opportunities for all Alaskans while sustaining the organisms harvested respecting traditional activities and ensuring equitable access to resources

Natural and Cultural History of Beargrass (Xerophyllum Tenax) Susan Stevens Hummel, Sarah Foltz-Jordan, Sophia Polasky, 2012 Beargrass *Xerophyllum tenax* Pursh Nutt is a source of food habitat and raw material for animals pollinating insects and people across its range in the western United States The plant has long been used by Native Americans who harvest the leaves for basketry and other crafts More recently beargrass has become an important component of international trade for the commercial floral greens industry Changes in natural and anthropogenic disturbances are occurring within the range of beargrass including fire frequency and severity plant harvest intensity and land use This report documents how changes in disturbance patterns might affect beargrass and its associated ecosystem diversity identifies gaps in knowledge or potential conflicts in human use and records quantitative and qualitative information on the natural and cultural history of beargrass We list and discuss some key sociocultural environmental and economic issues that relate to managing beargrass and the forested ecosystems in which it grows These include a lack of information on the main factors affecting beargrass reproduction and persistence including the importance of pollinators and light environment on plant fitness differences in desired leaf properties sought by traditional and commercial harvesters and inconsistent documentation on the volume and properties of harvested beargrass in total and by harvester group Future research needs include advancing knowledge of the effects of human and natural disturbances on the plant and its habitat including silvicultural practices leaf harvest practices and fire both prescribed and wild

Nontimber Forest Products in the United States Eric T. Jones, Rebecca Jean McLain, James F. Weigand, 2002 A quiet revolution is taking place in America's forests Once seen primarily as stands of timber our woodlands are now prized as a rich source of a wide range of commodities from wild mushrooms and maple sugar to hundreds of medicinal plants whose uses have only begun to be fully realized Now as timber harvesting becomes more mechanized and requires less labor the image of the lumberjack is being

replaced by that of the forager This book provides the first comprehensive examination of nontimber forest products NTFPs in the United States illustrating their diverse importance describing the people who harvest them and outlining the steps that are being taken to ensure access to them As the first extensive national overview of NTFP policy and management specific to the United States it brings together research from numerous disciplines and analytical perspectives such as economics mycology history ecology law entomology forestry geography and anthropology in order to provide a cohesive picture of the current and potential role of NTFPs The contributors review the state of scientific knowledge of NTFPs by offering a survey of commercial and noncommercial products an overview of uses and users and discussions of sustainable management issues associated with ecology cultural traditions forest policy and commerce They examine some of the major social economic and biological benefits of NTFPs while also addressing the potential negative consequences of NTFP harvesting on forest ecosystems and on NTFP species populations Within this wealth of information are rich accounts of NTFP use drawn from all parts of the American landscape from the Pacific Northwest to the Caribbean From honey production to a review of nontimber forest economies still active in the United States such as the Ojibway harvest of plants recounted here the book takes in the whole breadth of recent NTFP issues including ecological concerns associated with the expansion of NTFP markets and NTFP tenure issues on federally managed lands No other volume offers such a comprehensive overview of NTFPs in North America By examining all aspects of these products it contributes to the development of more sophisticated policy and management frameworks for not only ensuring their ongoing use but also protecting the future of our forests
