Protein-Lipid Interactions

C.Reyes Mateo,Javier Gómez,José Villalaín,José Manuel González Ros,2008-09-30 Biological membranes have long been identified as key elements in a wide variety of cellular processes including cell defense communication photosynthesis signal transduction and motility thus they emerge as primary targets in both basic and applied research This book brings together in a single volume the most recent views of experts in the area of protein lipid interactions providing an overview of the advances that have been achieved in the field in recent years from very basic aspects to specialized technological applications Topics include the application of X ray and neutron diffraction infrared and fluorescence spectroscopy and high resolution NMR to the understanding of the specific interactions between lipids and proteins within biological membranes

their structural relationships and the implications for the biological functions that they mediate Also covered in this volume are the insertion of proteins and peptides into the membrane and the concomitant formation of definite lipid domains within the membrane

Biotechnological Applications of Lipid Microstructures B. P. Gaber, 2012-12-06 In the twenty years since Bangham first described the model membrane system which he named liposomes a generation of scientists have explored the properties of lipid based microstructures Liposomes of all sizes tubular and helical structures and self assembled lipid films have been prepared and studied in detail Many of the advances in the basic research have led to significant technological applications Lipid microstructure research has begun to mature and it is an appropriate time for an in depth look at the biotechnological applications both achieved and potential As a forum for active discussions within this growing field two Workshops were organized Technological Applications of Phospholipid Bilayers Vesicles and Thin Films held in Puerto de la Cruz Tenerife Canary Islands and Biotechnological Applications of Membrane Studies held in Donostia San Sebastian Basque Country Spain The organizers of these Workshops believe that development of lipid self assembly into a technological discipline requires significant interaction across traditional scientific boundaries Thus the Workshops gathered an eclectic group of colleagues whose interests ranged from basic research into structure interactions and stabilization of biomembranes to applications of lipid microstructures such as artificial cells diagnostic reagents energy transfer systems and biosensors

Fluorescent Methods to Study Biological Membranes Yves Mely, Guy Duportail, 2012-10-10 Biological membranes play a central role in cell structure shape and functions However investigating the membrane bilayer has proved to be

difficult due to its highly dynamic and anisotropic structure which generates steep gradients at the nanometer scale Due to the decisive impact of recently developed fluorescence based techniques tremendous advances have been made in the last few years in our understanding of membrane characteristics and functions In this context the present book illustrates some of these major advances by collecting review articles written by highly respected experts The book is organized in three parts the first of which deals with membrane probes and model membranes The second part describes the use of advanced quantitative and high resolution techniques to explore the properties of biological membranes illustrating the key progress made regarding membrane organization dynamics and interactions The third part is focused on the investigation of membrane proteins using the same techniques and notably on the membrane receptors that play a central role in signaling pathways and therapeutic strategies All chapters provide comprehensive information on membranes and their exploration for beginners in the field and advanced researchers alike
