Water, Cryosphere, and Climate Change in the Himalayas Ajay Kumar Taloor, Bahadur Singh Kotlia, Kireet Kumar, 2021-04-24 This edited book summarizes numerous research studies on remote sensing and GIS of natural resource management for the Himalaya region done by Indian Institutions and Universities over the last decade It gives an overview of hydrometeorological studies on Himalayan water resources and addresses concerns in the development of water resources in this region which is dealing with an increased pressure in population industrialization and economic development While the source of some of the major rivers of India are found in the Himalayas the glaciers and water bodies in the region are continuously shrinking leading to a depletion of water and deterioration of water quality This is affecting a population of up to 2.5 billion people The ecosystems have been under threat due to deforestation loss of biodiversity expansion of agriculture and settlement overexploitation of natural resources habitat loss and fragmentation poaching mining construction of roads and large dams and unplanned tourism Spaceborne remote sensing with its ability to provide synoptic and repetitive coverage has emerged as a powerful tool for assessment and monitoring of the Himalayan resources and phenomena This work serves as a resource to students researchers scientists professionals and policy makers both in India and on a global level

Light Scattering Reviews 5 Alexander A. Kokhanovsky, 2010-08-05 Light scattering by densely packed inhomogeneous media is a particularly challenging optics problem In most cases only approximate methods are used for the calculations However in the case where only a small number of macroscopic scattering particles are in contact clusters or aggregates it is possible to obtain exact results solving Maxwell's equations Simulations are possible however only for a relatively small number of particles especially if their sizes are larger than the wavelength of incident light The first review chapter in Part I of this volume prepared by

Yasuhiko Okada presents modern numerical techniques used for the simulation of optical characteristics of densely packed groups of spherical particles. In this case, Mie theory cannot provide accurate results because particles are located in the near field of each other and strongly interact. As a matter of fact, Maxwell's equations must be solved not for each particle separately but for the ensemble as a whole. In this case, the author describes techniques for the generation of shapes of aggregates. The orientation averaging is performed by a numerical integration with respect to Euler angles. The numerical aspects of various techniques such as the T matrix method, discrete dipole approximation, the finite difference time domain method, effective medium theory, and generalized multi-particle Mie solution are presented. Recent advances in numerical techniques such as the grouping and adding method and also numerical orientation averaging using a Monte Carlo method are discussed in great depth. **NASA Technical Memorandum**, 1975 **Antarctic Journal of the United States**, 1997
