

Module 1: Fundamentals of Speech Communication

Various communication studies claim that we spend 70-80% of our waking hours communicating with others. Within this time, we also listen more (45%) than we speak (30%).

One of the most important changes in human consciousness in the last century has been the exponential growth of the means and forms of communication. Technology has made communication across geographical divides and time constraints possible — with digital means superseding many forms of face-to-face interactions. We realize that with the expanding range of communication channels available comes the need for a more critical view of what communication is and its role in human society and its development.

Definition, elements, and levels

Communication is defined as “a transactional process in which people generate meaning through the exchange of verbal and nonverbal messages in specific contexts, influenced by individual and societal forces and embedded in culture” (Alberts, Nakayama, & Martin, 2012, p. 9).

Based on this definition, communication involves the following components: message creation, meaning creation, setting, participants (individual experiences, hierarchies in relationships, culture), channels, noise, feedback, and contexts.

You may find yourself communicating in the following levels, perhaps, one or two more frequently than the others — intrapersonal, interpersonal (dyad and small group), organizational, and public. Adding to the list is technology-mediated and new media communication, which even the non-tech savvy people are forced to engage in, now that we are all learning and working from home.

Process, principles

Communication may be linear (one-way) which focuses on the transmission of the message from source to receiver, without any feedback. It may be transactional (two-way), wherein “(1) each communicator is a sender and receiver at the same time, (2)
