Speed Of Light:

The Speed of Light David A. Grandy, 2009-07-06 Light our experience of light our measurement of light and the notion that light speed is constant can be understood to mark our interface with the cosmos David A Grandy s book moves from the scientific to the existential from Einstein to Merleau Ponty from light as a phenomenon to light as that which is constitutive of reality To measure the speed of light is to measure something about the way we are measured or blended into the cosmos and that universal blending predetermines our measurement of light speed in favor of a universal or constant value It s quite a trip one aimed at scientists who have pondered light speed constancy philosophers inclined to question the idea that mind and world are distinct and scientifically or philosophically inclined persons who enjoy stretching themselves in new ways

Venkataraman, Venkataranan, 1993 **Journey to the Speed of Light** Aurora Amoris, 2025-01-01 This book explores the concept of traveling at the speed of light from scientific technological economic and ethical perspectives It begins by explaining the basic concepts such as the definition of the speed of light and Einstein s theory of relativity The book then delves into the scientific foundations of exceeding the speed of light examining theoretical possibilities like wormholes and the Alcubierre drive It also investigates the potential effects of light speed travel on society while exploring technological solutions the prospects of time travel and the economic and cultural impacts of such advancements The book further addresses the ethical and philosophical implications of these technologies questioning whether light speed travel is achievable in the future A comprehensive resource for those curious about the possibilities of space exploration and breaking the boundaries of time One Thousand Times the Speed of Light John Locke, 2009-05 Transcending the Speed of Light Marc Seifer, 2008-08-13 A study of the new scientific understanding of consciousness and the mind as a fifth dimension of reality Introduces the existence of a fifth dimension one of mind an inner or hyperspace where time is transcended Shows how the barrier of the speed of light is actually a gateway demarking the fifth dimension Since the introduction of Descartes

dualism in the seventeenth century the mind and the physical world have been viewed as disconnected entities Yet qualities of mind such as awareness purposeful action organization design and even decision making are present within the structure of matter and within the dimensions of space and time The space time continuum of scientists generally ignores the realm of the mind though phenomena such as imaginary numbers used by Einstein to combine space with time are concepts that only exist in the mind Marc Seifer contends that the inadequacy of four dimensional models to account for our experience of mental phenomena points to the consciousness of the mind as a higher organizing principle a fifth dimension where thoughts are as real and quantifiable as our familiar physical world He shows that because thought enables us to move backward and forward through time reflecting on the past and making plans for the future this fifth dimension of mind breaks the laws of relativity thereby transcending the speed of light His extensive study of this fifth dimension ranges from relativity and ether theory to precognition telepathy and synchronicity all from the perspective of the conscious universe

Trading at the Speed of Light Donald MacKenzie, 2023-01-31 Trading at the Speed of Light tells the story of how many of our most important financial markets have transformed from physical trading floors on which human beings trade face to face into electronic systems within which computer algorithms trade with

each other Tracing the emergence of ultrafast automated high frequency trading HFT since the early 2000s Donald MacKenzie draws particular attention to the importance of what he deems the material political economy of twenty first century finance Fast transmission of price data used to involve fibre optic cables but the strands in such cables are made of materials usually a specialised form of glass which slow light down to around two thirds of its speed in free space By contrast microwave and other wireless signals used in HFT travel through the atmosphere at nearly full light speed At these nanosecond speeds the physical nature of information transmission and the precise spatial location of the equipment involved become hugely important thus creating inevitable pinch points in the system MacKenzie details the ways in which these pinch points individual frequency bands specific locations on the roofs of computer data centres and particular sites for microwave towers are especially advantageous making it possible for those who control them to profit from that control The book draws from over 300 interviews conducted with high frequency traders around the world the people who supply them with technological systems and communication links exchange staff and regulators as well as with others who function within markets that have not yet become dominated by HFT MacKenzie focuses most closely upon the four main sites of international HFT Chicago New York Amsterdam and London and examines both the technology and the politics underpinning modern financial markets Provided by publisher

Paradox of the invariance of the speed of light Philippe de Bellecize, 2021-02-09T00:00:00Z This book revisits Einstein's postulate of the invariance of the speed of light focusing on the corresponding train thought experiment It shows how a close analysis of the supposed relativity of the simultaneity of light beam emissions brings us to the principle of the relativity of simultaneity at the physical level However in the objection about a spacecraft and a missile presented here this principle turns out to be self contradictory The present logical and mathematical considerations are liable to challenge the validity of the second postulate of Special Relativity Recognition of the results of this analysis could revolutionize our conception of spacetime

The Relative Speed Of Light Patrick Naughton, 2014-08-29 Analysis of the motion of the planets and their orbits around the sun raises an interesting possibility for the theory of General Relativity A simple spreadsheet model is presented which examines various factors that could influence the orbits of the planets It appears that variations in the speed of light could play an important role in determining the time taken for the planets to orbit the sun
