Dieser Buchtitel ist Teil des Digitalisierungsprojekts Springer Book Archives mit Publikationen die seit den Anfängen des Verlags von 1842 erschienen sind. Der Verlag stellt mit diesem Archiv Quellen für die historische wie auch die disziplingeschichtliche Forschung zur Verfügung, die jeweils im historischen Kontext betrachtet werden müssen. Dieser Titel erschien in der Zeit vor 1945 und wird daher in seiner zeittypischen politisch-ideologischen Ausrichtung vom Verlag nicht beworben.

Cohomology Theory of Topological Transformation Groups W.Y. Hsiang, 2012-12-06 Historically applications of algebraic topology to the study of topological transformation groups were originated in the work of L. E. J. Brouwer on periodic transformations and a little later in the beautiful fixed point theorem of P. A. Smith for prime periodic maps on homology spheres. Upon comparing the fixed point theorem of Smith with its predecessors the fixed point theorems of Brouwer and Lefschetz one finds that it is possible at least for the case of homology spheres to upgrade the conclusion of mere existence or non-existence to the actual determination of the homology type of the fixed point set if the map is assumed to be prime periodic. The pioneer result of P. A. Smith clearly suggests a fruitful general direction of studying topological transformation groups in the framework of algebraic topology. Naturally the immediate problems following the Smith fixed point theorem are to generalize it both in the direction of replacing the homology spheres by spaces of more general topological types and in the direction of replacing the group \mathbb{Z} by more general compact groups.

Theory of Linear Operators in Hilbert Space N. I. Akhiezer, I. M. Glazman, 2013-04-15 This classic textbook by two mathematicians from the USSR's prestigious Kharkov Mathematics Institute introduces linear operators in Hilbert space and presents in detail the geometry of Hilbert space and the spectral theory of unitary and self adjoint operators. It is directed to students at graduate and advanced undergraduate levels but because of the exceptional clarity of its theoretical presentation and the inclusion of results obtained by Soviet mathematicians it should prove invaluable for every mathematician and physicist. 1961/1963 edition

Linear Operators, Part 2 Nelson Dunford, Jacob T. Schwartz, 1988-02-23 This classic text written by two notable mathematicians constitutes a comprehensive survey of the general theory of linear operations together with applications to the diverse fields of more classical analysis. Dunford and Schwartz emphasize the significance of the

relationships between the abstract theory and its applications This text has been written for the student as well as for the mathematician treatment is relatively self contained This is a paperback edition of the original work unabridged in three volumes

Real Variables and Hilbert Space Operators for Scientists Frank Herbert Brownell, 1978

Spectral Theory of Linear Differential Operators and Comparison Algebras Heinz Otto Cordes, 1987-04-23 The main aim of this book is to introduce the reader to the concept of comparison algebra defined as a type of C^* algebra of singular integral operators The first part of the book develops the necessary elements of the spectral theory of differential operators as well as the basic properties of elliptic second order differential operators The author then introduces comparison algebras and describes their theory in L^2 spaces and L^2 Sobolev spaces and in particular their importance in solving functional analytic problems involving differential operators The book is based on lectures given in Sweden and the USA

Selected Papers on Algebra and Topology by Garrett Birkhoff J.S. Oliveira, G.-C. Rota, 1987-01-01 The present volume of reprints are what I consider to be my most interesting and influential papers on algebra and topology To tie them together and to place them in context I have supplemented them by a series of brief essays sketching their historical background as I see it In addition to these I have listed some subsequent papers by others which have further developed some of my key ideas The papers on universal algebra lattice theory and general topology collected in the present volume concern ideas which have become familiar to all working mathematicians It may be helpful to make them readily accessible in one volume I have tried in the introduction to each part to state the most significant features of each paper reprinted there and to indicate later developments The background that shaped and stimulated my early work on universal algebra lattice theory and topology may be of some interest As a Harvard undergraduate in 1928-32 I was encouraged to do independent reading and to write an original thesis My tutorial reading included de la Vallée Poussin's beautiful Cours d'Analyse Infinitesimale Hausdorff's Grundzüge der Mengenlehre and Frechet's Espaces Abstraits In addition I discovered Carathéodory's 1912 paper Über das lineare Mass von Punktmengen and Hausdorff's 1919 paper on Dimension und Ausseres Mass and derived much inspiration from them A fragment of my thesis analyzing axiom systems for separable metrizable spaces was later published

Diffusion Processes and their Sample Paths Kiyosi Itô, Henry P. Jr. McKean, 1996-01-05 Since its first publication in 1965 in the series Grundlehren der mathematischen Wissenschaften this book has had a profound and enduring influence on research into the stochastic processes associated with diffusion phenomena Generations of mathematicians have appreciated the clarity of the descriptions given of one or more dimensional diffusion processes and the mathematical insight provided into Brownian motion Now with its republication in the Classics in Mathematics it is hoped that a new generation will be able to enjoy the classic text of Itô and McKean
