

Autoradiography

- Autoradiography is a technique used to visualize the distribution of radioactive materials in a sample, such as biological tissues or gels
- It involves exposing a photographic film or detector to the sample, where radioactive emissions create an image
- This method is valuable for studying cellular and molecular processes by tracking substances like DNA, proteins, or drugs
- Autoradiography is particularly useful in research and medical diagnostics to analyze biochemical pathways and disease mechanisms

Practical example: Medical imaging

- Autoradiography is a technique used in medical imaging to visualize the distribution of radioactive substances within a tissue sample
- In healthcare, it is particularly useful for studying the spread of cancerous cells or understanding biochemical pathways in diseases
- By applying a radioactive tracer that binds to specific molecules within the body, and then placing the tissue against a photographic film, the emitted radiation exposes the film, creating a detailed image of the tracer's location
- This helps physicians diagnose and tailor treatments more effectively

Techniques of Autoradiography Andrew W. Rogers, 1969 **Autoradiography for Biologists** P Gahan, 2012-12-02

Autoradiography for Biologists discusses the basic and practical aspects of various autoradiography techniques. It is composed of six chapters; each chapter covers a specific form of autoradiography technique. Chapter 1 discusses various theoretical aspects of autoradiography such as radioactive decay, beta particle absorption, photographic process, sensitivity, and resolving power. Chapters 2 to 6 discuss basic aspects of several forms of autoradiography including macro stripping film, diffusible substances, liquid emulsion, and high resolution autoradiography. Practical and theoretical details of the technique, together with modifications made, are covered in each chapter. This book will be both an encouragement and a help to people wanting to apply autoradiography to the solution of biological problems.

Autoradiography in Biology and Medicine George A. Boyd, 2013-10-22

Autoradiography in Biology and Medicine focuses on the applications of autoradiography in medicine and biology, including photographic processes, emulsions, and response of films to isotopes and x-rays. The book first offers information on the meaning of autoradiography, including the etymology of autoradiography, photographic emulsion as a scientific instrument, and the relationship of biologists and autoradiography. The publication then examines the photographic process and comparative response of commercial and scientific emulsions. Discussions focus on fixation, washing, emulsion response of films to electrons, x-rays, and gamma rays, and response of films to beta ray spectra of isotopes. The text takes a look at commercial photographic materials for autoradiography, autoradiographic image, and resolution. The manuscript then reviews the estimation of dose and exposure time, sources of error, and techniques. Topics include chemical variables, estimation of exposure time, errors occurring during the preparation of the autoradiogram for exposure, and contour autoradiography. The book is a valuable reference for readers interested in autoradiography.

Techniques of Autoradiography AW. Rogers, 1979 **Autoradiography: Techniques and Application** Renato Baserga, Daniel Malamud, 1969 **Techniques in Cell Cycle Analysis** Joe W. Gray, Zbigniew Darzynkiewicz, 1987-02-04

Techniques in Cell Cycle Analysis Techniques in Neuroanatomical Research C. Heym, W.-G. Forssmann, 2012-12-06

Anatomy is the mother of physiology; this statement was used to characterize the evolution of physiology from anatomy as an independent science in the late nineteenth century. It had particular truth for neurophysiology, which started as functional neuroanatomy based on the observation of changes in behaviour after lesions of the nervous system, both in experimental animals and in human patients. Today, anatomy may again be considered the mother of physiology, however, the meaning of this statement is rather different from that 100 years ago. The modern mother provides a dwelling for an increasing number of children endowed with new functional capabilities. This book provides a good illustration of such semantic metamorphosis in the case of neuroanatomy. After a long period of little progress in either macroscopic neuroanatomy or neurohistology, during which the heritage of Cajal, Golgi, and others was developed and refined to yield a functional concept of the nervous system, the past two

decades have seen tremendous progress in methods applicable to the analysis of the nervous system. The new era was heralded by the introduction of the electron microscope to investigate the nervous system. This book is an impressive witness to the more recent developments. **Tools and Techniques in Radiation Biophysics** Ashima Pathak, 2023-12-27. This textbook describes the study of radiation covering the basic concepts and their advanced applications and highlights the handling of radioisotopes and radiation measurements using various instruments. The book also focuses on the effects and up to date applications of radiation on biological systems and their use in diagnosing and treating various diseases. Chapters provide an easy understanding of the subject matter with the help of self explanatory well illustrated figures and easy to grasp language. **Tools and Techniques in Radiation Biophysics** is designed for undergraduate and post graduate studying radiation Biophysics as one of the major courses in medical physics, nuclear medicine, biophysics and other applied sciences. The multi disciplinary approach of this book facilitates learning and a deep understanding of the concepts and helps the readers develop an interest in the subject so that they can pursue their careers efficiently in this field. Researchers and lecturers will value this book to enhance their knowledge and clarify queries. **Methods in Plant Electron Microscopy and Cytochemistry** William V. Dashek, 2000-06-29. Hands on experimentalists describe the cutting edge microscopical methods needed for the effective study of plant cell biology today. These powerful techniques all described in great detail to ensure successful experimental results range from light microscope cytochemistry, autoradiography and immunocytochemistry to recent developments in fluorescence confocal and dark field microscopies. Important advances in both conventional and scanning electron microscopies are also fully developed together with such state of the art ancillary techniques as high resolution autoradiography, immunoelectron microscopy, X ray microanalysis and electron systems imaging. Easy to use and up to date. **Methods in Plant Electron Microscopy and Cytochemistry** offers today's plant scientists a first class collection of readily reproducible light and electron microscopical methods that will prove the new standard for all working in the field.

Regulatory Peptides J.M. Polak, 1988-10-01. J. M. Polak and S. R. Bloom. For some time *Experientia* has published as a unique feature interdisciplinary multi author reviews giving a comprehensive overview of subjects regarded as growing edges of science. The enthusiasm shown by the readers was contagious and thus it was felt necessary to compile a special volume dealing with the novel aspects of regulatory peptides. This book covers some of the growing areas in regulatory peptide research and although it is based on the original volume of *Experientia* it is expanded and updated. The topic of regulatory peptides is relatively young and has grown at an unprecedented pace from the embryonic conception of gut hormones or brain neuropeptides some 15 years ago to the realisation that these active peptides are found almost without exception in every part of the body in all vertebrate and many invertebrate species. Why the term regulatory peptides. It represents a convenient label encompassing both the active peptides present in nerves which are released as putative neurotransmitters and those in endocrine cells which act locally or at a distance as circulating hormones these being the 18 main components of
