Technological Support For Work Group Collaboration:

Technological Support for Work Group Collaboration Margrethe H. Olson, Margrethe H. Olson, 2020-11-25 This text discusses the emerging trend in product development and research that focuses on the increasingly important relationship between computer systems and social systems The text emphasizes the significance of building tools to help people work together and the need for the identification of key factors within an organization to create systems more beneficial to users Also contained are reviews of current research and discussions of both established tools such as electronic mail and computer conferencing and those newly developed programs that emphasize work group productivity over individual productivity

New Approaches to Organizational Communication Branislav Kovacic, Branislav Kovač, 1994-01-01 New Approaches to Organizational Communication brings together three major conceptual developments First it sheds new light on standards used to evaluate processes and practices of organizational communication Second individual chapters delineate new vital mechanisms of organizational communications Third the book outlines the practical consequences of these new mechanisms of organizational communication

Computerization and Controversy Rob Kling, 1996 The second edition of this comprehensive reference is a collection of 78 articles that examine the social aspects of computerization from a variety of perspectives Fields represented include computer science information systems management journalism psychology law library science and sociology

Cscl Timothy Koschmann, 2012-10-12 This book about a newly emerging area of research in instructional technology has as its title the acronym CSCL Initially CSCL was chosen as an acronym for Computer Supported Collaborative Learning However some would argue that collaborative is often not a descriptive term for what learners do in instructional settings further as the field develops the technology used to support collaboration may not always involve computers at least not in the direct ways they have been used to support instruction in the past To avoid getting bogged down in this terminological debate this book uses CSCL as a designation in its own right leaving open to interpretation precisely what words it stands for The authors talk a great deal about the theory underlying their work In part this is because that is what they were asked to do but it is also an indication of the state of the field In an established paradigm in which the theories and methods are well agreed upon such discussion is less central CSCL however has not yet reached the stage of normal science There is much to be worked out yet This book is offered with the hope that it will help to define a direction for future work in this field The chapters appear in alphabetical order except for the introductory chapter and the afterword not for lack of a better way to organize the chapters but rather because the organizational possibilities are too numerous and this order does not privilege one over another By not imposing a topical organizing structure on this collection it is hoped that readers will feel freer to explore the chapters in a way that best suits their needs

DeGross, 2013-06-29 Over the past 20 years the field of information systems has grown dramatically in theoretical diversity and global reach This growth is reflected in the language that policy makers and organizational stakeholders use when they talk about their IT plans As information technology penetrates further into organizational and global life it becomes ever more important to articulate assumptions embedded in the discourse This will help to clarify the complex and yet conceptually improvised or pasted up worldview that becomes embodied in systems The assumptions point to particular domains of discourse The discourse sets up conventions and boundaries It thus shapes what can or cannot legitimately be talked about researched addressed or solved within the scope of IT A number of practical and theoretical topics are discussed in detail including Globalization development and space Mobilization of power ERP systems IS planning and projects Critical research and the study of discourse Public institutions Analytical frameworks This book contains the selected proceedings of the Working Conference on Global and Organizational Discourse About Information Technology sponsored by the International Federation for Information Processing IFIP and held in Barcelona Spain in December 2002 Handbook of New Media Leah A Lievrouw, Sonia M.
