Technological Change Methods And Themes In The History Of Technology:

Technological Change Robert Fox,1996 Technological Change gathers together examples of the best current thinking on methodology and the theoretical perspectives that are increasingly of concern to historians of technology whilst at the same time presenting other papers which reflect the state of the art in key areas of historical debate The volume emphasises the need both to establish a common forum for theoretical and empirical research and also to delineate the shared concerns of these two treatments which are too often reflected as conflicting rather than mutually supportive approaches to the writing of the history of technology

Technological Change Robert Fox,2012-10-12 In this volume scholars from these two very different traditions are brought together Never before has a single volume contained such a distinguished and diverse group of historians of technology

Conceptualizing Technological Change Govindan Parayil,2002 Technological change has been rightfully identified as the single most important factor for improving material well being Yet despite its centrality in our lives we seem to know very little about technology and how it develops and changes both spatially and temporally In this original and thoughtful book Govindan Parayil draws together current scholarship from disciplines ranging from history to economics to sociology as he develops a cohesive theory of technological change Drawing on a detailed case study of the Green Revolution in Indian agriculture Parayil convincingly argues that technological change is contingent upon the social historical process of knowledge change Thus he explores the policy implications of analyzing technological change as a problem solving activity An innovative contribution to the literature on technological change this ambitious book will also be valuable for those interested in such practical applications as understanding the process of technology transfer

The Water Supply System of Siena, Italy Michael P. Kucher,2020-10-28 The book reviews scholarly literature and archival sources including maps and diagrams to better situate Siena s achievement in urban history and broadens our understanding of medieval technology and urban life

Medieval Chivalry Richard W. Kaeuper, 2016-05-19
Emerging in the medieval period chivalry embodied ideals that elite warriors cherished and practices that formed their profession. In this major new overview Richard Kaeuper examines how chivalry made sense of violence and war making it tolerable for elite fighters rather than non knightly or sub knightly populations. He discusses how chivalry buttressed status and profession shaped active piety and fostered intense warrior attachments and heterosexual relationships. Though showing regional and chronological variations chivalry at its core enshrined the practice of prowess in securing honor with this process significantly blessed by religion. Both kingship and church authority sought to direct the great force of chivalry and despite tensions finally came to terms with rising knightly status and a burgeoning military role. Kaeuper engages with a wide range of evidence in his analysis drawing on the chivalric literature manuscript illumination and sermon exempla and moral tales.

1998 Massimo Mastrogregori, 2013-05-08

Power and the City in the Netherlandic World te Brake, Klooster, 2006-07-01
In the absence of a powerful state how was coercive power established within over and by the cities of the Low Countries. Eleven chapters covering the medieval and early modern periods explore this theme from various angles. Some chapters detail symbolic contests or armed struggle while others focus on industrial control by urban magistrates or their attempts to regulate servants and maintain religious orthodoxy. The essays suggest that the Netherlandic world in which cities have always loomed large may have followed a distinctive path of political development that characterized the urban belt of Europe more generally. As such this volume aims to create new understandings of the place of the Low Countries in European history.

How India Clothed the World Giorgio Riello, Tirthankar Roy, 2009
Cloth has always been the most global of all traded commodities. It is an illuminating example of the circulation of goods skills knowledge and capital across wide geographic spaces. South Asia has been central to the making of these global exchanges over time. This volume presents innovative research that explores the dynamic ways in which diverse textile production and trade regions generated the first globalization. A series of experts connect this global commodity with the dramatic political and economic transformations that characterised the Indian Ocean in the seventeenth and eighteenth centuries. Collectively

the essays transform our understanding of the contribution of South Asian cloth to the making of the modern world economy

Detailing Worlds Eric Bellin, 2025-02-06 In the 21st century the word detail appears constantly in discussions of building and we use it in many different ways yet just over 250 years ago detail meant nothing at all particular to the work of architects engineers or builders *Detailing Worlds* is the first book to examine the origins and evolution of detail as a concept with meanings specific to practices of building By exploring how past meanings and roles were ascribed to detail in different worlds of practice those of academics technicians students engineers and architects *Detailing Worlds* looks to the future illuminating the ways disciplinary knowledge and the concepts on which it is based evolve and change over time It is a story about how such concepts are slowly but constantly reconceived redefined and transformed by individuals as they interact with one another and how this process is shaped by the ever changing sociocultural and technological dimensions of the world around us Richly illustrated with more than 200 images including figures from rare texts archival student drawings and practitioners construction documents from the 18th through 20th centuries *Detailing Worlds* ventures to tell the history of a disciplinary specific idea and offer insights about how we think and speak about the practice of building today

American Libraries and the Internet: The Social Construction of Web Appropriation and Use Bin Li, 2007 *Entomology, Ecology and Agriculture* Paolo Palladino, 2013-05-13 This study is facilitated by following economic entomologists and ecologists changing ideas about different pest control strategies chiefly chemical biological and integrated control The author then follows the efforts of one specific group of entomologists at the University of California over three generations from their advocacy of biological controls in the 1930s and 40s through their shifting attention to the development of an integrated pest management in the context of big biology during the 1970s *Changing Images in Mathematics* Umberto Bottazini, Amy Dahan Dalmedico, 2013-06-17 This book focuses on some of the major developments in the history of contemporary 19th and 20th century mathematics as seen in the broader context of the development of science and culture Avoiding technicalities it displays the breadth of contrasting images of mathematics favoured by different countries schools and historical movements showing how the conception and practice of mathematics changed over time depending on the cultural and national context Thus it provides an original perspective for embracing the richness and variety inherent in the development of mathematics Attention is paid to the interaction of mathematics with themes whose proper treatment have been neglected by the traditional historiography of the discipline such as the relationship between mathematics statistics and medicine

Reconsidering Sputnik Roger D. Lanius, John M. Logsdon, Robert W. Smith, 2013-05-13 This book explores Russia's stunning success of ushering in the space age by launching Sputnik and beating the United States into space It also examines the formation of NASA the race for human exploration of the moon the reality of global satellite communications and a new generation of scientific spacecraft that began exploring the universe An introductory essay by Pulitzer Prize winner Walter A McDougall sets the context for Sputnik and its significance at the end of the twentieth century

Discovering Water David Philip Miller, 2017-05-15 The water controversy concerns one of the central discoveries of modern science that water is not an element but rather a compound The allocation of priority in this discovery was contentious in the 1780s and has occupied a number of 20th century historians The matter is tied up with the larger issues of the so called chemical revolution of the late eighteenth century A case can be made for James Watt or Henry Cavendish or Antoine Lavoisier as having priority in the discovery depending upon precisely what the discovery is taken to consist of however neither the protagonists themselves in the 1780s nor modern historians qualify as those most fervently interested in the affair In fact the controversy attracted most attention in early Victorian Britain some fifty to seventy years after the actual work of Watt Cavendish and Lavoisier The central historical question to which the book addresses itself is why the priority claims of long dead natural philosophers so preoccupied a wide range of people in the later period The answer to the question lies in understanding the enormous symbolic importance of James Watt and Henry Cavendish in nineteenth century science and society More than credit for a particular discovery was at stake here When we examine the various agenda of the participants in the Victorian phase of the water controversy we find it driven by filial loyalty and nationalism but also most importantly by ideological struggles about the nature of science and its relation to technological invention and innovation in British society At a more general theoretical level this study also provides important insights into conceptions of the nature of discovery as they are debated by modern historians philosophers and sociologists of science *Making Histories in Transport Museums* Colin Divall, Andrew Scott, 2001-11-01 This book is the first in 30 years to take transport museums seriously as vehicles for the making of public histories Drawing upon many years experience of visiting and working in transport museums around the world the authors argue that the sector's historical roots are more complex than is usually thought Written from a multidisciplinary perspective but firmly rooted in the practice of making public histories this book brings the study of transport museums firmly into the mainstream of academic and professional debate *The Fight Against Cancer* Patrice Pinell, 2003-08-27 Between the two World Wars an illness that mainly affects adults over fifty years old became so prominent that it superseded both tuberculosis and syphilis in importance As Patrice Pinell shows the effect of cancer in France before World War Two reached far beyond the question of its mortality rates Pinell's socio historical approach to the early developments in the fight against cancer describes how scientific therapeutic philanthropic ethical social economics and political interest combined to transform medicine **Science and Spectacle** John Agar, 2014-02-04 Science and Spectacle relates the construction of the telescope to the politics and culture of post war Britain From radar and atomic weapons to the Festival of Britain and later Harold Wilson's rhetoric of scientific revolution science formed a cultural resource from which post war careers and a national identity could be built The Jodrell Bank Radio Telescope was once a symbol of British science and a much needed prestigious project for the Department of Scientific and Industrial Research but it also raised questions regarding the proper role of universities as sites for scientific research *Slavery, Capitalism and*

the Industrial Revolution Maxine Berg, Pat Hudson, 2023-05-25 The role of slavery in driving Britain's economic development is often debated but seldom given a central place In their remarkable new book Maxine Berg and Pat Hudson follow the money to document in revealing detail the role of slavery in the making of Britain's industrial revolution Slavery was not just a source of wealth for a narrow circle of slave owners who built grand country houses and filled them with luxuries The forces set in motion by the slave and plantation trades seeped into almost every aspect of the economy and society In textile mills iron and copper smelting steam power and financial institutions slavery played a crucial part Things we might think far removed from the taint of slavery such as eighteenth century fashions for indigo patterned cloth sweet tea snuff boxes mahogany furniture ceramics and silverware were intimately connected Even London's role as a centre for global finance was partly determined by the slave trade as insurance financial trading and mortgage markets were developed in the City to promote distant and risky investments in enslaved people The result is a bold and unflinching account of how Britain became a global superpower and how the legacy of slavery persists Acknowledging Britain's role in slavery is not just about toppling statues and renaming streets We urgently need to come to terms with slavery's inextricable links with Western capitalism and the ways in which many of us continue to benefit from slavery to this day

The History and Poetics of Scientific Biography Thomas Söderqvist, 2016-03-03 Biographies of scientists carry an increasingly prominent role in today's publishing climate Traditional historical and sociological accounts of science are complemented by narratives that emphasize the importance of the scientific subject in the production of science Not least is the realization that the role of science in culture is much more accessible when presented through the lives of its practitioners Taken as a genre such biographies play an important role in the public understanding of science In recent years there has been an increasing number of monographs and collections about biography in general and literary biography in particular However biographies of scientists engineers and medical doctors have rarely been the topic of scholarly inquiry As such this volume of essays will be welcomed by those interested in the genre of science biography and who wish to re-examine its history foundational problems and theoretical implications Borrowing approaches and methods from cultural studies and the history philosophy and sociology of science the contributions cover a broad range of subjects periods and locations By presenting such a rich diversity of essays the volume is able to chart the reoccurring conceptual problems and devices that have influenced scientific biographies from classical antiquity to the present day In so doing it provides a compelling overview of the history of the genre suggesting that the different valuations given scientific biography over time have been largely fuelled by vested professional interests
