Technology And Biochemistry Of Wine:

Technology and Biochemistry of Wine Beatrix Farkas,1988-03-08 *Chemistry and Biochemistry of Winemaking, Wine Stabilization and Aging* Fernanda Cosme,Fernando M. Nunes,Luís Filipe-Ribeiro,2021-02-10 This book written by experts aims to provide a detailed overview of recent advances in oenology Book chapters include the latest progress in the chemistry and biochemistry of winemaking stabilisation and ageing covering the impact of phenolic compounds and their transformation products on wine sensory characteristics emerging non thermal technologies fermentation with non *Saccharomyces* yeasts pathways involved in aroma compound synthesis the effect of wood chips use on wine quality the chemical changes occurring during Port wine ageing sensory mechanisms of astringency physicochemical wine instabilities and defects and the role of cork stoppers in wine bottle ageing It is highly recommended to academic researchers practitioners in wine industries as well as graduate and PhD students in oenology and food science *Wine Chemistry and Biochemistry* M. Victoria Moreno-Arribas,Carmen Polo,2008-11-06 The aim of this book is to describe chemical and biochemical aspects of winemaking that are currently being researched The authors have selected the very best experts for each of the areas The first part of the book summarizes the most important aspects of winemaking technology and microbiology The second most extensive part deals with the different groups of compounds how these are modified during the various steps of the production process and how they affect the wine quality sensorial aspects and physiological activity etc The third section describes undesirable alterations of wines including those affecting quality and food safety Finally the treatment of data will be considered an aspect which has not yet been tackled in any other book on enology In this chapter the authors not only explain the tools available for analytical data processing but also indicate the most appropriate treatment to apply depending on the information required illustrating with examples throughout the chapter from enological literature **Post-Fermentation and -Distillation Technology** Matteo Bordiga,2017-12-15 While most wine and spirits books focus on vineyard and crop management or fermentation and distillation processes few address critical post process aspects of stabilization aging and spoilage This book serves as a comprehensive source of information on post fermentation and distillation technology applied to wine beer vinegar and distillates in a broad spectrum Post Fermentation and Distillation Technology Stabilization Aging and Spoilage thoroughly describes all of the operations related to these products after the fermentation or distillation steps focusing on the complex issues related to their stabilization aging and spoilage The final product must be stable against microbial activity as well as undesirable chemical and physical chemical reactions that occur in the bottle For example clarity stability compositional adjustment style development and packaging represent the five goals of finishing a wine Concerning the visual defects associated with spoilage it is crucial that wine at the point of consumption not be cloudy or contain any haze or precipitate especially white wines Similarly it is also important to prevent unwanted microbial growth from occurring in the wine after the primary fermentation is complete affecting the flavor and

aroma profile in unpredicted ways The book addresses all of these issues and more Moreover the discussion also involves beer vinegar and distillates giving this book a novel and interesting approach The book combines referenced research with practical applications and case studies of novel technologies such as square barrels synthetic closures and Tetra Pak

Science and Technology of Fruit Wine Production Maria R. Kosseva,V.K. Joshi,P.S. Panesar,2016-11-01 Science and Technology of Fruit Wine Production includes introductory chapters on the production of wine from fruits other than grapes including their composition chemistry role quality of raw material medicinal values quality factors bioreactor technology production optimization standardization preservation and evaluation of different wines specialty wines and brandies Wine and its related products have been consumed since ancient times not only for stimulatory and healthful properties but also as an important adjunct to the human diet by increasing satisfaction and contributing to the relaxation necessary for proper digestion and absorption of food Most wines are produced from grapes throughout the world however fruits other than grapes including apple plum peach pear berries cherries currants apricot and many others can also be profitably utilized in the production of wines The major problems in wine production however arise from the difficulty in extracting the sugar from the pulp of some of the fruits or finding that the juices obtained lack in the requisite sugar contents have higher acidity more anthocyanins or have poor fermentability The book demonstrates that the application of enzymes in juice extraction bioreactor technology and biological de acidification MLF bacteria or de acidifying yeast like schizosaccharomyces pombe and others in wine production from non grape fruits needs serious consideration Focuses on producing non grape wines highlighting their flavor taste and other quality attributes including their antioxidant properties Provides a single volume resource that consolidates the research findings and developed technology employed to make wines from non grape fruits Explores options for reducing post harvest losses which are especially high in developing countries Stimulates research and development efforts in non grape wines **Sweet, Reinforced and Fortified Wines** Fabio Mencarelli,Pietro

Tonutti,2013-04-16 Wines from Grape Dehydration is the first of its kind in the field of grape dehydration the controlled drying process which produces a special group of wines These types of wine are the most ancient made in the Mediterranean basin and are even described in Herodotus Until few years ago it was thought that these wines such as Pedro Ximenez Tokai Passito and Vin Santo were the result of simple grape drying because the grapes were left in the sun or inside greenhouses that had no controls over temperature relative humidity or ventilation But Amarone wine one of the most prized wines in the world is the first wine in which the drying is a controlled process This controlled process grape dehydration changes the grape at the biochemical level and involves specialist vine management postharvest technology and production processes which are different from the typical wine making procedure After a history of grape dehydration the book is then divided into two sections scientific and technical The scientific section approaches the subjects of vineyard management and dehydration technology and how they affect the biochemistry and the quality compounds of grape as well as vinification practices to

preserve primary volatiles compounds and colour of grape The technical section is devoted to four main classes of wine Amarone Passito Pedro Ximenez and Tokai The book then covers sweet wines not made by grape dehydration and the analytical sensorial characteristics of the wines A concluding final chapter addresses the market for these special wines This book is intended for wineries and wine makers wine operators postharvest specialists vineyard managers growers enology wine students agriculture viticulture faculties and course leaders and food processing scientists *Concise Encyclopedia of Science and Technology of Wine* V.
