Creating Value with Science and Technology Eliezer Geisler, 2001-08-30 Do science and technology create value for society and the economy and how might one go about measuring it How do we evaluate its benefits Can we even be certain that there are benefits Geisler argues that there are benefits and that they outweigh in value the negative impacts that inevitably accompany them His revolutionary new book goes on to show that they can also be measured and evaluated and in one volume all of the existing knowledge on how to do it is compiled then Geisler s own methods are offered The result is a compelling argument that the value of science and technology in our lives has indeed been positive and that the economic well being of all individuals organizations and nations rests upon them Geisler starts off by describing his conceptual framework for the evaluation of science and technology and the impact and benefits that proceed from them He discusses the nature of evaluation in general terms and then in the specific context of science technology and innovation together He

reviews the state of our present knowledge and assesses the nature of value creation itself Throughout Geisler remains fixed on his driving thesis Although there are certainly some negative impacts from science and technology on the whole the results of its outputs are positive He shows how they have contributed to a range of activities and institutions particularly to the improvement of health and human welfare worldwide Finally after discussing the theories of evaluation he gets down to the practice providing readers with a way to assess science and technological innovations for themselves

Deus Ex Machina Sapiens David Ellis, 2011 Watson's win on Jeopardy came as no surprise to those who had read *Deus ex Machina sapiens* It was written largely during the 1990s around the time that another IBM supercomputer Deep Blue was trouncing world chess grandmaster Garry Kasparov The book has since been updated on a few points of detail but its primary message remains intact the Machine is rapidly evolving as Man's rival if not replacement for the job of Steward of the Earth Building upon the work of some of the world's greatest scientists philosophers and religious thinkers and drawing particularly from developments in the computing and cognitive sciences particularly the field of artificial intelligence or AI the book reveals the evolutionary emergence of a machine that is not just intelligent but also self conscious emotional and free willed In the 1980s and 90s you used to hear grandiose claims about AI Machines would soon surpass humans in intelligence it was claimed by some The Japanese government spent a billion dollars on one project to make it happen Well it didn't happen but that didn't stop the development of intelligence in machines AI research simply went underground and has ever since been quietly incorporated into the ordinary programs we use every day without fanfare

without hype There is still no machine that rivals Homo sapiens in overall intelligence but today there are machines that far exceed human intellectual capacity in specific domains from games to engineering to art and the number of domains is growing exponentially big and exponentially fast The disappearance of AI from front stage was good insofar as it allowed machines to develop in the right way that is through an evolutionary process which is the only way for something of such complexity to develop But it was bad insofar as we lost sight of the development of the intelligent machine Deus brings Machina sapiens back to front stage where it belongs After describing the evolutionary development of intelligence in machines it goes on to describe the emotional intellectual and ethical attributes of what is no less than an emergent new life form It asks the Big Question that can only be asked if you accept the very possibility of the new life form Will it be serpent or savior The question is answered in the book s title which is intended to mean God Emerging From the Intelligent Machine The author confesses to having never studied Latin and to have concocted the title from two known Latin phrases Deus ex Machina and Homo sapiens The concoction could be grammatically incorrect The author would be pleased to be corrected
