The Technology of Ancient Rome Naomi V. McCullough, 2016-12-15 Ancient Rome was a civilization developed over many centuries At its height it had the world's greatest army rulers and language influencing much of the known world Their technologies during this time were likewise improvements on older concepts mostly from the Greeks whom they conquered Nevertheless their influence continued long after the fall of the Roman Empire Today several technologies have their origins in Ancient Rome This book examines the history of Ancient Rome and its key contributions to society past and present

The Industrial Revolution - Lost in Antiquity - Found in the Renaissance Cort MacLean Johns Ph.D. - HSG, 2021-03-15 Historians of Technology have failed to include the larger contribution and influence of Ctesibius compressor driven Hydraulis with its pneumatic pumps keyboard and organ pipes in the path of critical preparatory events leading up to the Latent Industrial Revolution One should also realize that Ctesibius had all the parts and sub assemblies on hand to invent the first Steam Hydraulis or Calliope as illustrated on the front book cover of this work From the Fertile Crescent of the Persian Empire to the Hellenistic Library of Alexandria Vitruvius writing brought the Hydraulis to the Abbey of St Gall in 1414 during the Renaissance Its path then took it through Italy Germany and the Paris of Louis XIV along the Arch of Industrial Reawakening This was the Hydraulis 2 millennium path from Antiquity to its return reigniting the Latent Industrial Revolution

The Metaphysics of Technology David Skrbina, 2014-07-25 What is technology Why does it have such power in our lives Why does it seemingly progress of its own accord and without regard to social or environmental well being The quest for the essence of technology is an old one with roots in the pre Socratic philosophy of ancient Greece It was then that certain thinkers first joined the ideas of techn and logos into a single worldview The Greeks saw it as a kind of world force present in both the works of men and in nature itself It was the very creative power of the cosmos In the 20th century German thinkers like Dessauer Juenger and Heidegger sought the metaphysical basis of technology with varying success French theologian Jacques Ellul argued persuasively that technology was an autonomous force of nature that determined all aspects of human existence but he neglected the metaphysical underpinnings Recent writers in the philosophy of technology have generally eschewed metaphysics altogether preferring to concentrate on constructivist models or pragmatic analyses In the present work Skrbina returns to a classic metaphysical approach seeking not so much an essence

of technology but rather a deep and penetrating analysis of the entire technological phenomenon. Drawing on the Greeks he argues for a teleological metaphysics in which increasing order in the universe is itself defined as a technological process. On this reading all of reality constitutes a technical sphere, a *panteknikon* of universal scope. This work, the first ever book-length treatment of the topic, breaks new ground by providing an in-depth and critical study of the metaphysics of technology as well as drawing out the practical consequences. Technology poses significant risks to humanity and the planet; risks that can be mitigated through a detailed philosophical analysis.

The Industrial Revolution - Lost in Antiquity - Found in the Renaissance Cort McLean Johns Ph.D. - HSG, 2021-03-05. Historians of Technology and Humanist Industrial Archaeologists have failed to include the larger contribution and influence of Ctesibius' compressor-driven *Hydraulis* with its pneumatic pumps, keyboard and organ pipes in the path of critical preparatory events leading up to the Latent Industrial Revolution. One should also realize that Ctesibius had all the parts and sub-assemblies on hand to invent the first Steam *Hydraulis* or *Calliope* as illustrated on the front book cover of this work. From the Fertile Crescent of the Persian Empire to the Hellenistic Library of Alexandria, Vitruvius' writing brought the *Hydraulis* to the Abbey of St Gall in 1414 during the Renaissance. Its path then took it through Italy, Germany and the Paris of Louis XIV along the Arch of Industrial Reawakening. This was the *Hydraulis* 2-millennium path from Antiquity to its return, reigniting the Latent Industrial Revolution.

Women Philosophers on Economics, Technology, Environment, and Gender History Ruth Edith Hagengruber, 2023-08-21. In times of current crisis, the voices of women are needed more than ever. The accumulation of war and environmental catastrophes teaches us that exploitation of people and nature through violent appropriation and enrichment for the sake of short-term self-interest exacts its price. This book presents contributions on the currently most relevant and most urgent issues: reshaping the economy, environmental problems, technology and the re-reading of history from the non-western and western tradition. With an outlook into the problems of class, race and gender in its intersectional framing, the collection offers a unique overview of current research in these fields and contributes to the renewal and contemporary presentation of feminist thought from partly concrete perspectives with regard to factual issues.

Industrial Revolutions Cort MacLean Johns, 2021-05-23. With reference to artefactual archaeological evidence and surviving manuscript documentation of the *Hydraulis*, I find that a new dialectical discussion might better analyze and address the underlying understanding of the Steam Engines' longitudinal provenance and therefore requires a redefinition of the origins of Industrial Revolutions themselves, from Ctesibius to the exploration of Mars.

Nazi Volksgemeinschaft Technology John C. Guse, 2023-10-26. This book traces how Gottfried Feder and Fritz Todt made technology essential to the Nazi world view. They groomed engineers with a racist technical ideology that prepared them to later supervise slave labor and the Holocaust. Their concepts evolved from a *Völkisch* technocracy to an idealized harmony of man, machine and nature and were eclipsed by Albert Speer's total war. Partially due to willing self-coordination from engineers, they gained political control over the engineering profession. Destined to be pillars

of the Volksgemeinschaft engineers were indoctrinated with Nazi principles of Aryan superiority at the Reich School of Technology the Plassenburg Nazi propaganda announced a bright future through technology furthering a sense of normalcy in Germany despite the ruthless exclusion of those unwanted
