Curtis,Elizabeth A. City,2009-09-01 How can we systemically improve the quality of classroom instruction and the learning and achievement of students In an era when isolated examples of excellence are not good enough we need systems that support improvement and excellence for all

This book describes how systems can effectively engage in this complex challenging and crucial work The authors explore three core competencies of high performing school systems 1 understanding what the work is a deep understanding of the core business of facilitating learning a vision of what that looks like and an awareness of where the system is in relation to that vision 2 knowing how to do the work a theory of action for improving instruction a focus on key strategies and effective alignment of resources and 3 building the individual and organizational habits of mind that foster continuous improvement Each chapter includes examples that illustrate key concepts in action questions to spur self assessment in key areas of competence and tools and resources for building capacity at different levels and stages of development *Resources in*

Congress. House. Committee on Science, 1998 Knowledge in Action Kathryn Anderson, Isabelle Bartkowiak-Théron, 2014-10-21 University Community engagement is an important part of a nation's social and economic development An increasing focus on how knowledge is exchanged has encouraged many universities to consider their relationship and engagement with local communities More than ever universities are developing strategies for engaging with business industry government and community and recognise the role that they can play in the exchange of knowledge With authorship drawn from community partners and universities **Promising Practices in Undergraduate Science, Technology, Engineering, and Mathematics Education** National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, Planning Committee on Evidence on Selected Innovations in Undergraduate STEM Education, 2011-05-19 Numerous teaching learning assessment and institutional innovations in undergraduate science technology engineering and mathematics STEM education have emerged in the past decade Because virtually all of these

innovations have been developed independently of one another their goals and purposes vary widely Some focus on making science accessible and meaningful to the vast majority of students who will not pursue STEM majors or careers others aim to increase the diversity of students who enroll and succeed in STEM courses and programs still other efforts focus on reforming the overall curriculum in specific disciplines In addition to this variation in focus these innovations have been implemented at scales that range from individual classrooms to entire departments or institutions By 2008 partly because of this wide variability it was apparent that little was known about the feasibility of replicating individual innovations or about their potential for broader impact beyond the specific contexts in which they were created The research base on innovations in undergraduate STEM education was expanding rapidly but the process of synthesizing that knowledge base had not yet begun If future investments were to be informed by the past then the field clearly needed a retrospective look at the ways in which earlier innovations had influenced undergraduate STEM education To address this need the National Research Council NRC convened two public workshops to examine the impact and effectiveness of selected STEM undergraduate education innovations This volume summarizes the workshops which addressed such topics as the link between learning goals and evidence promising practices at the individual faculty and institutional levels classroom based promising practices and professional development for graduate students new faculty and veteran faculty The workshops concluded with a broader examination of the barriers and opportunities associated with systemic change
