broadcasts A topic that is often neglected in text books on telecommunications but is at the forefront of Modern Telecommunications concerns transmission lines This is an important area of work since every length of coaxial cable used to convey signals from an antenna to a receiver is a transmission line It is vitally important that a transmission line linking a transmitter to the antenna is matched and this topic is explored in great detail in several chapters dealing with Smith charts Explains the background behind digital TV and radio as well as the legacy of analogue transmissions Presents materials in a way that minimizes mathematics making the topic more approachable and interesting to users Provides a look at familiar systems that readers encounter in their everyday life including mobile phones Wi Fi hotspots satellites digital TV etc Demonstrates techniques and topics through end of chapter problems Presents materials in an introductory form making the information easily understandable and suitable for an undergraduate option course *Nursing Today - Revised Reprint*
