## **Tecnologias De La Informacion:**

**Tecnologías de la información y la comunicación** Ortiz Cerecedo, Francisco Javier, 2020-05-13 Tecnologías de la información y la comunicación pretenden que el estudiante potencialice sus habilidades con las TIC desde la perspectiva de herramienta transversal para el desarrollo académico y también para lograr una comunicación más estrecha. Analiza temas como la nube, las fuentes de información y la programación entre otros temas de relevancia.

**Tecnologías de la Información** Jorge Vasconcelos Santillán, 2015-08-18 La segunda edición de *Tecnologías de la información* de Jorge Vasconcelos Santillán presenta de manera práctica los fundamentos y las herramientas principales de la computación y las tecnologías de la información, temas que son indispensables para los estudiantes del siglo XXI. Con base en el programa de estudios actualizado para los Bachilleratos Técnicos, esta obra está estructurada en dos partes: Software de aplicación e Internet, que a su vez se dividen en siete unidades: Texto, Redes sociales, Presentaciones, Íconos y gráficos, Software libre y comercial, Herramientas de información y Herramientas de comunicación. Su principal objetivo es apoyar al estudiante a crear y desarrollar competencias y habilidades para que logre un manejo eficiente de las herramientas tecnológicas durante su actividad académica. Entre las características didácticas de la obra cabe destacar el tema integrador que abre cada unidad a fin de dar contexto a los temas estudiados así como la secuencia didáctica que incluye interesantes actividades y tareas ejercicios que fomentan tanto la adquisición de conocimientos como la aplicación de los mismos. Por otro lado, el diseño innovador y las ilustraciones a todo color brindan un gran atractivo a la obra. En esta segunda edición se han agregado diferentes tipos de instrumentos de evaluación como rúbricas, listas de cotejo y guías de observación que posibilitan al estudiante valorar su nivel de desempeño y el desarrollo de competencias.

**Tecnologías de la información y la comunicación** Ramón Carlos Suárez y Alonso, 2007-01-01 El efecto 2000 puso en vilo a la humanidad la Nochevieja del año 1999, noche en la que pudo haberse paralizado toda la tecnología mundial. Quizás se magnificó el posible efecto pero sirvió para que el mundo entero se diese cuenta de que estamos inmersos en la sociedad de la información y del conocimiento, así como de la dependencia que tenemos de las tecnologías de la información y la comunicación. La nueva economía se basa en unos pilares aparentemente muy delicados: los datos secundarios de los meros abstractos que viajan en forma electrónica por el aire o por los cables. Pero además de delicados son poderosos: puesto que los datos debidamente procesados se transforman en información de utilidad. La información analizada, almacenada, transmitida, reutilizada y compartida genera conocimiento. En este material didáctico que Ideas Propias Editorial le presenta se revisan los principales conceptos relacionados con las tecnologías de la información y la comunicación, las bases de la informática y de las telecomunicaciones, los elementos de un ordenador, los tipos de redes locales y de telecomunicaciones, así como la estructura de la información, las aplicaciones informáticas y las tendencias en la sociedad de la información. El objetivo de esta obra es mostrar a cualquier lector de forma sencilla la complejidad de los sistemas de información y telecomunicación.
