

Common network issues

Business networks routinely experience a range of problems, both big and small. Here are some of the most common network issues that IT departments troubleshoot.

Slow network speeds

End users might complain the network is too slow. Several factors can stall network performance with video traffic a common culprit.

Weak Wi-Fi signal

Reconfiguring an office could create areas with weak Wi-Fi connections. A wireless network testing tool can help remedy this problem.

Broken physical connections

Damaged or disconnected network cables are a common cause of physical connectivity issues. Proper cable management is key.

High CPU usage

The Task Manager is a simple tool that can detect which applications are gobbling up system resources. Stopping and restarting apps can help.

DNS problems

Slow DNS lookups can certainly hinder network traffic. Network admins can reconfigure local routers to shift network requests to faster servers.

IP address issues

Duplicate, exhausted and static IP addresses can prevent systems from accessing the network reliably and result in network disruptions.

Can't connect to printer

Many end users have encountered this problem. Luckily, many of the fixes for this issue are simple, like make sure the printer is plugged in.

VLAN and VPN problems

Check for virtual LAN misconfigurations. VPN connectivity issues can also be a common network problem with simple to complex solutions.
