Telescopes for the 1980s Geoffrey R. Burbidge, Adelaide Hewitt, 1981 Astronomy and Astrophysics for the 1980's, Volume 2 National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Astronomy Survey Committee, 1983-02-01 **Astronomy and Astrophysics for the 1980's, Volume 1** National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Astronomy Survey Committee, 1982-02-01 The Space Telescope Observatory Donald Norman Blake Hall, 1982 **Literature 1980, Part 1** Siegfried Böhme, Ute Esser, Professor Dr. Walter Fricke, Inge Heinrich, Wilfried Hofmann, Dietlinde Krahn, Dorothea Rosa, Dr. Lutz D. Schmadel, Gert Zech, 2013-11-11 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user I 1980 some older Volume 27 contains literature published in 1980 and received before August literature which was received late and which is not recorded in earlier volumes is also included We acknowledge with thanks contributions to this volume by Dr J Bouska Prague who surveyed journals and publications in Czech and supplied us with abstracts in English *Discovering the Essential Universe* Neil F. Comins, 2012-01-04 *Discovering the Universe* Fifth Edition is one of the briefest texts available for an introductory astronomy course while providing the wide range of factual topics that are the hallmark of the text and are consistent with most course needs By flipping through the book readers will find it as rich in celestial images and figures as other textbooks for the same audience It is a balanced approach to content depth and breadth with effective teaching resources It is also up to date reflecting how our knowledge about the universe is expanding at a phenomenal rate **Working Papers** National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Board on Physics and Astronomy, Astronomy and Astrophysics Survey Committee, 1991-02-01 This volume contains working papers on astronomy and astrophysics prepared by 15 non National Research Council panels in areas ranging from radio astronomy to the status of the profession Literature 1980, Part 2 Siegfried Böhme, Professor Dr. Walter Fricke, Inge Heinrich, Wilfried Hofmann, Dietlinde Krahn, Dorothea Rosa, Dr. Lutz D. Schmadel, Gert Zech, 2013-04-18 **Department of Housing and Urban Development--independent Agencies Appropriations for 1980** United States. Congress. House. Committee on

Appropriations. Subcommittee on HUD-Independent Agencies,1979      *General Theory of Light Propagation and Imaging Through the Atmosphere* T. Stewart McKechnie,2015-08-05 This book lays out a new general theory of light propagation and imaging through Earth's turbulent atmosphere Current theory is based on the now widely doubted assumption of Kolmogorov turbulence The new theory is based on a generalized atmosphere the turbulence characteristics of which can be established as needed from readily measurable properties of point object or star images The pessimistic resolution predictions of Kolmogorov theory led to lax optical tolerance prescriptions for large ground based astronomical telescopes which were widely adhered to in the 1970s and 1980s Around 1990 however it became clear that much better resolution was actually possible and Kolmogorov tolerance prescriptions were promptly abandoned Most large telescopes built before 1990 have had their optics upgraded e.g. the UKIRT instrument and now achieve without adaptive optics AO almost an order of magnitude better resolution than before As well as providing a more comprehensive and precise understanding of imaging through the atmosphere with large telescopes both with and without AO the new general theory also finds applications in the areas of laser communications and high energy laser beam propagation      *The Emergence of Astrophysics in Asia* Tsuko Nakamura,Wayne Orchiston,2017-11-03 This book examines the ways in which attitudes toward astronomy in Australia China India Indonesia Japan South Korea New Zealand Taiwan Thailand and Uzbekistan have changed with the times The emergence of astrophysics was a worldwide phenomenon during the late nineteenth and early twentieth centuries and it gradually replaced the older style positional astronomy which focused on locating and measuring the movements of the planets stars etc Here you will find national overviews that are at times followed by case studies of individual notable achievements Although the emphasis is on the developments that occurred around 1900 later pioneering efforts in Australian Chinese Indian and Japanese radio astronomy are also included As the first book ever published on the early development of astrophysics in Asia the authors fill a chronological and technological void Though others have already written about earlier astronomical developments in Asia and about the recent history of astronomy in various Asian nations no one has examined the emergence of astrophysics the so called new astronomy in Asia during the late nineteenth and early twentieth centuries

1980 National Science Foundation Authorization United States. Congress. House. Committee on Science and Technology. Subcommittee on Science, Research, and Technology,1979      *Building and Using Binoscopes* Norman Butler,2017-10-03 Covering both homemade and commercial products this book provides the reader with simple and straightforward information about the modeling building and use of binoscopes Binoscopes can be thought of as binoculars enlarged to the size of telescopes essentially a combination of the two Constructing a binoscope is easier than most people think but it still demands attention to detail and proper background knowledge The author goes on to provide additional information about the products currently on the market should the reader choose to purchase one instead of building it Lastly the book also compares binoscopes with telescopes in great detail outlining the differences the reader can expect to see in the night sky

from using both The celestial views obtained with a binoscope compared to a single telescope of the same aperture are a very different experience The new edition emphasizes the obvious advantages of viewing celestial objects through a binoscope There are also many new photos and additional information on the latest equipment and some very special and rare equipment a collector might be interested in Newly added cartoons and additional images of beautiful deep sky objects in each of the chapters makes reading the book a more enjoyable experience Finally there is a new comet discovery form and guide to follow for such discoveries and a complete list of Messier objects for those interested in searching for these
