collected over the past two decades pointing to an increasing and in some instances a surprising influence of the medium Television is not only watched but its messages are attended to and well understood There is no shame in spending hours in front of the set in fact people over estimate the time they spend viewing Television advertising no longer persuades it sells by creating a burst of emotional liking for the commercial The emphases of television news determine not only what voters think about but also the presidential candidate they expect to support on election day Children and teenagers who watch a great deal of television perform poorly on standardized achievement tests and among the reasons are the usurpation of time spent learning to read and the discouragement of book reading Television violence frightens some children and excites others but its foremost effect is to increase aggressive behavior that sometimes spills over into seriously harmful antisocial behavior Incorporates social psychology political science sociology child development and the growing field of communications Presents tables and graphs clarifying theories and linking sets of data Paints concise portraits of the role of television in entertainment politics and child rearing Contains background for dozens of lectures and articles Contains a comprehensive bibliography of more than 1000 citations many recent Handbook of Children and the Media Dorothy G. Moving Experiences David Gauntlett, 2005 A newly revised and expanded edition of the classic critique of media effects studies Publisher

Media Violence and its Effect on Aggression Jonathan L. Freedman, 2002-12-15 The scientific evidence does not support the notion that TV and film violence cause aggression in children or in anyone else So argues Jonathan Freedman based on his findings that far fewer than half of the scientific studies have found a causal connection between exposure to media violence and aggression or crime In fact Freedman believes that taken to a more controversial extreme the research could be interpreted as showing that there is no causal effect of media violence at all *Media Violence and its Effect on Aggression* offers a provocative challenge to the accepted norms in media studies and psychology Freedman begins with a comprehensive review of all the research on the effect of violent movies and television on aggression and crime Having shown the lack of scientific support for the prevailing belief that media violence is connected to violent behaviour he then explains why something that seems so intuitive and even obvious might be incorrect and goes on to

provide plausible reasons why media violence might not have bad effects on children He contrasts the supposed effects of TV violence on crime with the known effects of poverty and other social factors and discusses the difference between television advertising which he argues does have an effect and violent programs which do not Freedman concludes by noting that in recent years television and films have been as violent as ever and violent video games have become more and more popular yet during this period there has been a dramatic decrease in violent crime He argues that this makes it highly implausible that media violence causes aggression or crime
