**Exploration** James S.J. Schwartz, Tony Milligan, 2016-07-25 This book aims to contribute significantly to the understanding of issues of value including the ultimate value of space related activities which repeatedly emerge in interdisciplinary

discussions on space and society Although a recurring feature of discussions about space in the humanities the treatment of value questions has tended to be patchy of uneven quality and even on occasion idiosyncratic rather than drawing upon a close familiarity with state of the art ethical theory One of the volume s aims is to promote a more robust and theoretically informed approach to the ethical dimension of discussions on space and society While the contributions are written in a manner which is accessible across disciplines the book still withstands scrutiny by those whose work is primarily on ethics At the same time it allows academics across a range of disciplines an insight into current approaches toward how the work of ethics gets done The issues of value raised could be used to inform debates about regulation space law and protocols for microbial discovery as well as longer range policy debates about funding
