Students On The Margins:

Assessing Students in the Margin Michael Russell, Maureen Kavanaugh, 2011-02-01 The importance of student assessment particularly for summative purposes has increased greatly over the past thirty years At the same time emphasis on including all students in assessment programs has also increased Assessment programs whether they are large scale district based or teacher developed have traditionally attempted to assess students using a single instrument administered to students under the same conditions Educators and test developers however are increasingly acknowledging that this practice does not result in valid information inferences and decisions for all students This problem is particularly true for students in the margins whose characteristics and needs differ from what the public thinks of as the general population of students Increasingly educators educational leaders and test developers are seeking strategies techniques policies and guidelines for assessing students for whom standard assessment instruments do not function well Whether used for high stakes decisions or classroom based formative decisions the most critical element of any educational assessment is validity Developing and administering assessment instruments that provide valid measures and allow for valid inferences and decisions for all groups of students presents a major challenge for today s assessment programs Over the past few decades several national policies have sparked research and development efforts that aim to increase test validity for students in the margins This book explores recent developments and efforts in three important areas The first section focuses on strategies for improving test validity through the provision of test accommodations The second section focuses on alternate and modified assessments Federal policies now allow testing programs to develop and administer alternate assessments for students who have not been exposed to grade level content and thus are not expected to demonstrate proficiency on grade level assessments A separate policy allows testing programs to develop modified assessments that will provide more useful information about achievement for a small percentage of students who are exposed to grade level content but for whom the standard form of the grade level test does not provide a valid measure of achievement These policies are complex and can be confusing for educators who are not familiar with their details The chapters in the second section unpack these policies and explore the implications these policies have for test design The third and final section of the book examines how principles of Universal Design can be applied to improve test validity for all students Collectively this volume presents a comprehensive examination of the several issues that present challenges for assessing the achievement of all students While our understanding of how to overcome these challenges continues to evolve the lessons strategies and avenues for future research explored in this book empower educators test developers and testing programs with a deeper understanding of how we can improve assessments for students in the margins

Makonye, Neal Petersen, Paulinah Phahamane, Jessica Pool, H.J. (Hennie) Steyn, Johannes

(Hannes) L. van der Walt, Charl Wolhuter, 2016-12-31 This book will benefit specialists in the field of the education sciences. It represents significant progress in knowledge production. Self directed learning has become increasingly important not only for education in South Africa but also for education sciences in the international arena. This is a result of the changing education landscape caused by the demands of the 21st century as well as the rapid change in knowledge production. Learners should be equipped with skills to take responsibility for their own learning. New innovative strategies should be incorporated into teaching and learning in order to meet the changing demands in education. Traditional teacher centred practices are still the norm in most South African schools and higher education institutions and do not adequately prepare students for lifelong learning in the 21st century. The content focuses on the theory behind self directed learning, explores strategies such as cooperative learning, problem based learning, case based teaching and large group teaching that enhance self directed learning and the use of blended learning in a self directed learning environment. The book demonstrates how self directed learning can be enhanced in mathematics, computer science and life science education and through the use of student tutors for geography. Digital technology could for example also be used in innovative ways for education in isiZulu folk poetry. The findings are based on original empirical research and a sound theoretical conceptual framework. In an environment of rapidly changing knowledge production, this book responds to the challenge of how to equip learners with the necessary skills to take responsibility for their own learning. The book presents innovative teaching and learning strategies for meeting the changing demands in education. Group activities, the responsibilities of learners and the obstacles that hinder their learning are analysed and the way in which educators can support them is discussed. Educational values such as mutual trust are discussed and self directed assessment is explored. This is a timely collective work authored by experts who subscribe to the approach of self directed learning. Educators should discover new teaching and learning strategies and value the integration of self directed learning in the classroom.
