

A Guide to Writing Student Psychology Lab Reports

General description

A lab report is a document that tells the reader everything that they need to know about a particular piece of research. Psychology students must learn to understand and to produce lab reports. They are used widely in higher education for assessment, for example when students produce theses. They are used by professional psychologists when they publish research in academic journals. The same basic format is usually also used for reports of investigations that may not be published in academic journals, but are used by hospitals, companies, government departments etc. The style described here is more or less the same as used in most universities around the world. It is based on APA 6th edition. However, the APA style guide is nearly 300 pages long. So this guide does not include everything the APA require. However, if you follow this guide you will produce a lab report that conforms to the most important issues of structure and format of the APA.

Sections of a lab report

Experimental studies are the most common research written as lab reports. However, other studies such as correlational or observational studies have more or less the same structure. This is:
