Studies In The Culture Of Science In France And Britain Since The Enlightenment:

Studies in the Culture of Science in France and Britain Since the Enlightenment Maurice P. Crosland, 1995 A wide range of the author's previously published papers in the history of science is brought together in this book. The articles which are mainly concerned with the 18th and 19th centuries are arranged in three sections: science in the Enlightenment period, science in an institutional context, national and international science. Some of the papers present a broad perspective, others are of a more detailed nature, drawing on the archives of the Paris Academy of Sciences and the Royal Society of London. An original interpretation of the career of Priestley is followed by a historiographical article on Lavoisier. Papers with a more social approach include subjects such as the professionalisation of science, peer review and science and war. It is argued that science became a profession in France long before it did in Britain. France also created an important precedent in the academic world in demanding publications of research as credentials.

Scientific Institutions and Practice in France and Britain, c.1700-c.1870 Maurice Crosland, 2023-05-31 This second collection of studies by Maurice Crosland has as a first theme the differences in the style and organisation of scientific activity in Britain and France in the 18th and early 19th centuries. Science was more closely controlled in France, notably by the Paris Academy of Sciences and the work of provincial amateurs, much less prominent than in Britain. The most dramatic change in any branch of science during this period was in chemistry, largely through the work of Lavoisier and his colleagues; the focus of several articles here and the dominance of this group caused considerable resentment outside France, not least by Joseph Priestley. The issue of authority in science emerges again within France under the rule of Napoleon in a study of the exceptional power exercised by the great mathematician Laplace, both in theoretical science and in academic politics. This exploration of organisation and power is complemented by a comparative study of the practice of early physics and chemistry and their different reliance on laboratories. This raises the question of whether chemistry provided a model for later experimental work in other sciences, both through the construction of pioneering laboratories and in establishing early schools of research.

Public Science and Public Policy in Victorian England Roy M. MacLeod, 2024-10-28 This book comprises nine essays selected from Roy MacLeod's work on the social history of Victorian science and is concerned with the analysis of science as a responsibility and opportunity for 19th-century statecraft. It illuminates the origins of environmental regulation, the creation of scientific inspectorates, the reform of scientific institutions and the association of government with the patronage and support of fundamental research. Above all, it explores several of the ways in which British scientists became statesmen in disguise, negotiating interests and professional goals by association with the interests of the state as provider and agent of efficiency in education and in the application of research.

The Limits of Absolutism in ancien régime France Richard Bonney, 2024-10-28 This selection of articles is organized around three broad themes: the nature of the governing system in France, Absolutism, the political crisis of the mid 17th century, the Fronde, and the development of royal finance. The author

first considers the growth of the French state in its ideological and institutional aspects then the opposition such developments provoked much centred on the figure of Cardinal Mazarin In the last section particular attention is given to fiscal history including a comparison of mid 18th century France with the other states of Europe Professor Bonney would argue that the fiscal imperative the increased requirements posed by the costs of war and the long term consequences of fiscal growth may be seen as one of the decisive factors in the development of the modern state *The Development of Science and Technology in Nineteenth-Century Britain* Donald Cardwell,2017-11-01 This title was first published in 2003 Donald Cardwell s interest in the inter relationships between science technology education and society are exemplified in the selection of his studies and essays brought together here The first section deals with the rise of scientific education in Britain comparing it with that on the Continent The next studies explore the development of the scientific understanding of power especially steam power and its application in the new technologies of the Industrial Revolution The final section looks at learned societies and in particular at Manchester making explicit a theme running through many of the articles the reasons why science society and education came together to make this city what he called the centre of the industrial revolution

History of Universities: Volume XV: 1997-1999 Peter Denley,2000-04-13 Volume XV of History of Universities contains the customary mix of learned articles book reviews conference reports and bibliographical information which makes this publication such an indispensable tool for the historian of higher education Its contributions range widely geographically chronologically and in subject matter The volume is as always a lively combination of original research and invaluable reference material Auguste Comte: Volume 2 Mary Pickering,1993 This volume explores the life and works of Auguste Comte during the last and most controversial part of his career the period from 1842 to 1857 The Scientific Journal Alex Csiszar,2018-06-25 Not since the printing press has a media object been as celebrated for its role in the advancement of knowledge as the scientific journal From open communication to peer review the scientific journal has long been central both to the identity of academic scientists and to the public legitimacy of scientific knowledge But that was not always the case At the dawn of the nineteenth century academies and societies dominated elite study of the natural world Journals were a relatively marginal feature of this world and sometimes even an object of outright suspicion The Scientific Journal tells the story of how that changed Alex Csiszar takes readers deep into nineteenth century London and Paris where savants struggled to reshape scientific life in the light of rapidly changing political mores and the growing importance of the press in public life The scientific journal did not arise as a natural solution to the problem of communicating scientific discoveries Rather as Csiszar shows its dominance was a hard won compromise born of political exigencies shifting epistemic values intellectual property debates and the demands of commerce Many of the tensions and problems that plague scholarly publishing today are rooted in these tangled beginnings As we seek to make sense of our own moment of intense experimentation in publishing platforms peer review and information curation Csiszar argues powerfully that a better understanding of the

journal's past will be crucial to imagining future forms for the expression and organization of knowledge *Spain and the Early Stuarts, 1585-1655* Albert J. Loomie, 2024-10-28 These studies focus on Spain's relations with England from the last stages of the Elizabethan war to the opening years of the Cromwellian regime Particular attention is given to the issue of religion and to the character and conduct of peacetime diplomacy and intelligence gathering In the first studies Professor Loomie deals with the policies of Philip II and preparations for the 1597 Armada The following articles examine Spanish attitudes towards the Stuart court and an unknown cultivation of the Independents during and after the Civil War

Utopia's Garden E. C. Spary, 2010-12-15 The royal Parisian botanical garden the Jardin du Roi was a jewel in the crown of the French Old Regime praised by both rulers and scientific practitioners Yet unlike many such institutions the Jardin not only survived the French Revolution but by 1800 had become the world's leading public establishment of natural history the Muséum d'Histoire Naturelle E C Spary traces the scientific administrative and political strategies that enabled the foundation of the Muséum arguing that agriculture and animal breeding rank alongside classification and collections in explaining why natural history was important for French rulers But the Muséum's success was also a consequence of its employees Revolutionary rhetoric by displaying the natural order they suggested the institution could assist in fashioning a self educating self policing Republican people Natural history was presented as an indispensable source of national prosperity and individual virtue Spary's fascinating account opens a new chapter in the history of France science and the Enlightenment
