Studies In Earth And Space Sciences:

Studies in Earth and Space Sciences Harry Hammond Hess, Reginald Shagam, 1973-01-01 *An Enabling Foundation for NASA's Earth and Space Science Missions* National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Role and Scope of Mission-Enabling Activities in NASA's Space and Earth Science Missions, 2010-03-25 NASA's space and Earth science program is composed of two principal components: spaceflight projects and mission enabling activities. Most of the budget of NASA's Science Mission Directorate (SMD) is applied to spaceflight missions, but NASA identifies nearly one quarter of the SMD budget as mission enabling. The principal mission enabling activities, which traditionally encompass much of NASA's research and analysis, include suborbital payloads and flights and complementary ground-based programs, advanced technology development and advanced mission and instrumentation concept studies. While the Research and Analysis (R&A) program is essential to the development and support of NASA's diverse set of space and Earth science missions, defining and articulating an appropriate scale for mission enabling activities have posed a challenge throughout NASA's history. This volume identifies the appropriate roles for mission enabling activities and metrics for assessing their effectiveness. Furthermore, the book evaluates how, from a strategic perspective, decisions should be made about balance between mission-related and mission enabling elements of the overall program, as well as balance between various elements within the mission enabling component. Collectively, these efforts will help SMD to make a good program even better.

Assessment of Mission Size Trade-offs for NASA's Earth and Space Science Missions National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Space Studies Board, Ad Hoc Committee on the Assessment of Mission Size Trade-offs for Earth and Space Science Missions, 2000-08-31 *Assessment of Mission Size Trade-offs for NASA's Earth and Space Science Missions* addresses fundamental issues of mission architecture in the nation's scientific space program and responds to the FY99 Senate conference report which requested that NASA commission a study to assess the strengths and weaknesses of small, medium, and large missions. This report evaluates the general strengths and weaknesses of small, medium, and large missions in terms of their potential scientific productivity, responsiveness to evolving opportunities, ability to take advantage of technological progress, and other factors that may be identified during the study. It identifies which elements of the Space Science Board (SSB) and NASA science strategies will require medium or large missions to accomplish high priority science objectives and recommends general principles or criteria for evaluating the mix of mission sizes in Earth and space science programs. *Assessment of Mission Size Trade-offs for NASA's Earth and Space Science Missions* considers not only scientific, technological, and cost trade-offs but also institutional and structural issues pertaining to the vigor of the research community, government-industry-university partnerships, graduate student training, and the like.

Open Source Software Policy Options for NASA Earth and Space Sciences National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Best Practices for a Future Open

Code Policy for NASA Space Science,2019-01-27 Modern science is ever more driven by computations and simulations In particular the state of the art in space and Earth science often arises from complex simulations of climate space weather and astronomical phenomena At the same time scientific work requires data processing presentation and analysis through broadly available proprietary and community software 1 Implicitly or explicitly software is central to science Scientific discovery understanding validation and interpretation are all enhanced by access to the source code of the software used by scientists This report investigates and recommends options for NASA s Science Mission Directorate SMD as it considers how to establish a policy regarding open source software to complement its existing policy on open data In particular the report reviews existing data and software policies and the lessons learned from the implementation of those policies summarizes community perspectives and presents policy options and recommendations for implementing an open source software policy for NASA SMD

Earth Science and Applications from Space National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on Earth Science and Applications from Space: A Community Assessment and Strategy for the Future,2005-09-07 The Earth is a dynamic planet whose changes and variations affect our communications energy health food housing and transportation infrastructure Understanding these changes requires a range of observations acquired from a variety of land sea air and space based platforms To assist NASA NOAA and the USGS develop these tools the NRC was asked by these agencies to carry out a decadal strategy survey of Earth science and applications from space In particular the study is to develop the key scientific questions on which to focus Earth and environmental observations in the period 2005 2015 and a prioritized list of space programs missions and supporting activities to address these questions This interim report outlines a key element of the study the rationale for tying Earth observations to societal need and identifies urgent near term actions needed to achieve this goal A final report due in late 2006 will provide the list of recommended space missions programs and supporting

Space Studies Board Annual Report 2009 National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,2010-01-01 The Space Studies Board SSB was established in 1958 to serve as the focus of the interests and responsibilities in space research for the National Academies The SSB provides an independent authoritative forum for information and advice on all aspects of space science and applications and it serves as the focal point within the National Academies for activities on space research It oversees advisory studies and program assessments facilitates international research coordination and promotes communications on space science and science policy between the research community the federal government and the interested public The SSB also serves as the U S National Committee for the International Council for Science Committee on Space Research COSPAR The present volume reviews the organization activities and reports of the SSB for the year 2009

Controlling Cost Growth of NASA Earth and Space Science Missions National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on Cost Growth in NASA Earth and Space Science

Missions,2010-09-21 Cost and schedule growth is a problem experienced by many types of projects in many fields of endeavor Based on prior studies of cost growth in NASA and Department of Defense projects this book identifies specific causes of cost growth associated with NASA Earth and space science missions and provides guidance on how NASA can overcome these specific problems The recommendations in this book focus on changes in NASA policies that would directly reduce or eliminate the cost growth of Earth and space science missions Large cost growth is a concern for Earth and space science missions and it can be a concern for other missions as well If the cost growth is large enough it can create liquidity problems for NASA s Science Mission Directorate that in turn cause cost profile changes and development delays that amplify the overall cost growth for other concurrent and or pending missions Addressing cost growth through the allocation of artificially high reserves is an inefficient use of resources because it unnecessarily diminishes the portfolio of planned flights The most efficient use of resources is to establish realistic budgets and reserves and effective management processes that maximize the likelihood that mission costs will not exceed reserves NASA is already taking action to reduce cost growth additional steps as recommended herein will help improve NASA s mission planning process and achieve the goal of ensuring frequent mission opportunities for NASA Earth and space science

Forging the Future of Space Science National Research Council,Division on Engineering and Physical Sciences,Aeronautics and Space Engineering Board,Space Studies Board,2010-03-08 From September 2007 to June 2008 the Space Studies Board conducted an international public seminar series with each monthly talk highlighting a different topic in space and Earth science The principal lectures from the series are compiled in Forging the Future of Space Science The topics of these events covered the full spectrum of space and Earth science research from global climate change to the cosmic origins of life to the exploration of the Moon and Mars to the scientific research required to support human spaceflight The prevailing messages throughout the seminar series as demonstrated by the lectures in this book are how much we have accomplished over the past 50 years how profound are our discoveries how much contributions from the space program affect our daily lives and yet how much remains to be done The age of discovery in space and Earth science is just beginning Opportunities abound that will forever alter our destiny

U.S.-European Collaboration in Space Science European Science Foundation,National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Commission on Physical Sciences, Mathematics, and Applications,European Space Science Committee,Committee on International Space Programs,1998-07-26 U S European Collaboration in Space Science reviews the past 30 years of space based research across the Atlantic The book which was prepared jointly with the European Space Science Committee under the aegis of the European Science Foundation begins with a broad survey of the historical and political context of U S European cooperation and collaboration in space The focus of the book is a set of 13 U S European missions in astrophysics space physics planetary sciences earth sciences and life and microgravity research that illustrate lessons learned on the evolution of the cooperation mission planning and scheduling
