Studies of Field Systems in the British Isles Alan R. H. Baker, Robin A. Butlin, 1973-07-19 An enormous amount of research into British field systems has been undertaken by historical geographers economic historians and others since H L Gray s classic work on English Field Systems was published Detailed local studies have been legion generalized explanations of the origins and functioning of field systems few but influential in promoting further studies This book both synthesises and advances our knowledge of field systems in the British Isles An introduction by the editors outlines the sources and methods of studies of field systems There then follow twelve chapters concerned with specific areas within the British Isles In their own conclusion the editors consider the problems and perspectives of field system studies in the context of the British Isles as a whole This chapter is an attempt at generalisation in historical geography generalization in relation to both existing models of British field systems and putative problems which only further research can resolve

Field Systems and Farming Systems in Late Medieval England Bruce M.S. Campbell, 2023-05-31 The later Middle Ages was an overwhelmingly rural world with probably three out of four households reliant upon farming for a living Yet conventional accounts of the period rarely do justice to the variety of ways in which the land was managed and worked The thirteen essays collected in this volume draw upon the abundant documentary evidence of the period to explore that diversity In the process they engage with the issue of classification without which effective generalisation is impossible and offer a series of solutions to that particularly thorny methodological challenge Only through systematic and objective classification is it possible to differentiate between and map different field systems husbandry types and land use categories That in turn makes it possible to consider and evaluate the relative roles of soils and topography institutional structures and commercialised market demand in shaping farm enterprise both during the period of mounting population before the Black Death and the long era of demographic decline that followed it What emerges is an agrarian world more commercialised differentiated and complex than is usually appreciated whose institutional and agronomic contours shaped the course of agricultural development for centuries to come

The Open Field System and Beyond Carl J. Dahlman, 1980-05-15 In this book Professor Dahlman applies modern economic methodology to an old historical problem He demonstrates how the quaint institutions of the ancient English open field system of agriculture can be understood as an intelligent and rational adaptation to a particular problem of production and to certain historical circumstances He argues that the two major characteristics of this type of agriculture scattered strips owned by individual peasants and extensive areas of common land both fulfilled vital economic functions This overturns the traditional view of the open field system as inefficient and rigidly bound by tradition and throws

light on the behaviour of medieval peasants Professor Dahlman also offers some generalisations about the economic theory of institutions and institutional change refuting the idea that an economic analysis of institutions must necessarily be deterministic As a challenge to some of the fundamental criticisms of the application of economic theory to historical problems the book will be of great interest to agrarian historians and to economic historians generally as well as to specialists in the medieval period

The Oxford Handbook of Later Medieval Archaeology in Britain Christopher Gerrard, Alejandra Gutiérrez, 2018-01-11 The Middle Ages are all around us in Britain The Tower of London and the castles of Scotland and Wales are mainstays of cultural tourism and an inspiring cross section of later medieval finds can now be seen on display in museums across England Scotland and Wales Medieval institutions from Parliament and monarchy to universities are familiar to us and we come into contact with the later Middle Ages every day when we drive through a village or town look up at the castle on the hill visit a local church or wonder about the earthworks in the fields we see from the window of a train The Oxford Handbook of Later Medieval Archaeology in Britain provides an overview of the archaeology of the later Middle Ages in Britain between AD 1066 and 1550 61 entries divided into 10 thematic sections cover topics ranging from later medieval objects human remains archaeological science standing buildings and sites such as castles and monasteries to the well preserved relict landscapes which still survive This is a rich and exciting period of the past and most of what we have learnt about the material culture of our medieval past has been discovered in the past two generations This volume provides comprehensive coverage of the latest research and describes the major projects and concepts that are changing our understanding of our medieval heritage

Place, Culture, and Identity Alan R. H. Baker, 2001 Alan R H Baker of the Geography Department of the University of Cambridge has played a leading role in the development of historical geography This book which features twelve specially commissioned essays recognizes his highly influential and innovative contributions The contributors address the following topics methodology and ideology in historical geography historical geographies of state regulation and political discourse the social and cultural use of public and private space and the interpretation of images of place in relation to cultural and national identity

Period and Place Alan R. H. Baker, Mark Billinge, 1982-05-06 This 1982 volume of essays attempts to promote discussion about the purpose and practice of historical geography

Environment, Society and Landscape in Early Medieval England Tom Williamson, 2015 The origins of England's regional cultures are here shown to be strongly influenced by the natural environment and geographical features The Anglo Saxon period was crucial in the development of England's character its language and much of its landscape and culture were forged in the period between the fifth and the eleventh centuries Historians and archaeologists have long been fascinated by its regional variations by the way in which different parts of the country displayed marked differences in social structures settlement patterns and field systems In this controversial and wide ranging study the author argues that such differences were largely a consequence of environmental factors of the influence of climate soils and hydrology and of the patterns of

contact and communication engendered by natural topography He also suggests that such environmental influences have been neglected over recent decades by generations of scholars who are embedded in an urban culture and largely divorced from the natural world and that an appreciation of the fundamental role of physical geography in shaping human affairs can throw much new light on a number of important debates about early medieval society The book will be essential reading for all those interested in the character of the Anglo Saxon and Scandinavian settlements in early medieval social and territorial organization and in the origins of the England's medieval landscapes Tom Williamson is Professor of Landscape History University of East Anglia he has written widely on landscape archaeology agricultural history and the history of landscape design

The Making of the Scottish Countryside M. L. Parry, T. R. Slater, 2021-10-12 Originally published in 1980 this book examines the evolution of the Scottish landscape from pre historic times to the mid nineteenth century It considers the way in which the structural base of agriculture and the changing farming system came to alter the Scottish rural landscape This book with its focus on the underlying landscape processes gives a developmental view of landscape change It therefore considers the crucial question of the rate and pace of landscape change and argues that the Scottish landscape was not the product of a few brief phases of quite rapid development but rather the result of a continual and gradual process of change It also looks at the regional variation of landscape change and establishes the importance of regional linkages in the diffusion of ideas especially in new technology

A Guide to Information Sources in the Geographical Sciences Stephen Goddard, 1983-01-01 Geography is a wide ranging discipline and the number of information sources available is truly enormous These include printed books and journal articles maps satellite photographs archives statistical information and much else One particular problem facing geographers is that when one studies a foreign country information may be available only in the foreign country and difficult to obtain This book discusses the information sources available to geographers
