Studies On The Piriform Lobe:

Studies on the Piriform Lobe Facundo Valverde, 1965 Olfaction and the Brain Warrick J. Brewer, David Castle, Christos Pantelis, 2006-10-19 Olfaction and its relation to mental health is an area of growing interest evidenced by the 2004 Nobel Prize in Physiology or Medicine being awarded for discoveries relating to odorant receptors and the organization of the olfactory system Olfaction is of particular interest to specialists seeking a fuller understanding of schizophrenia Clear deficits in the sense of smell could predict schizophrenia in apparently unaffected individuals In this book first published in 2006 Warrick Brewer and his team of experts set out our understanding of olfaction and mental health relating it to broader principles of neural development and processing as a foundation for understanding psychopathology The neuropathological neuropsychological and neuropsychiatric aspects of olfactory function and dysfunction are all covered drawing on neuroimaging techniques where appropriate and indications for future research and applications are discussed **The Neuropsychology of Smell and Taste** G. Neil Martin, 2013-06-19 Smell and taste are our most misunderstood senses Given a choice between losing our sense of smell and taste or our senses of sight and hearing most people nominate the former rather than the latter Yet our sense of smell and taste has the power to stir up memories alter our mood and even influence our behaviour In *The Neuropsychology of Smell and Taste* Neil Martin provides a comprehensive critical analysis of the role of the brain in gustation and olfaction In his accessible and characteristic style he shows why our sense of smell and taste do not simply perform basic and intermittent functions but lie at the very centre of our perception of the world around us Through an exploration of the physiology anatomy and neuropsychology of the senses the neurophysiological causes of smell and taste disorders and their function in physical and mental illness Neil Martin provides an accessible and up to date overview of the processes of gustation and olfaction *The Neuropsychology of Smell and Taste* provides a state of the art overview of current research in olfactory and gustatory perception With sections describing the effect of odour and taste on our behaviour and evaluating the contribution current neuroimaging technology has made to our understanding of the senses the book will be of interest to researchers and students of neuropsychology and neuroscience and anybody with an interest in olfaction and gustation *Limbic and Autonomic Nervous Systems Research* Leo DiCara, 2012-12-06 The present volume has been written primarily for the advanced student and the mature investigator The book will be of value to the student because it includes representative research problems on a variety of topics and significant for the mature investigator because it can help bring him up to date on specific topics in limbic and autonomic nervous system research an area which has undergone spectacular growth particularly during the last ten years The twelve chapters deal with subject matter that falls loosely into four major subtopics basic sensory and regulatory mechanisms emotional processes cardiovascular processes and learning and low arousal states but each chapter represents recent research in one particular area and stands as a self contained unit I am indebted to the many authors and publishers for their aid in granting permission to reproduce

Neuropharmacology Methods in Epilepsy Research Steven L. Peterson, 2019-05-07 There is an estimated 2 5 million
epileptics in the US and perhaps some 40 million worldwide As research has become increasingly molecular in scope fewer
scientists are trained in the US on basic integrated epilepsy techniques One frustration in neuroscience today is the
application of state of the art molecular biology techniques to inappropriate animal models of epilepsy frequently resulting in
inconclusive results Epilepsy research will be increasingly undertaken by scientists well trained in reductionist methodology
but who may be unfamiliar with integrated whole animal techniques This situation appears even more difficult considering
there has been no updated textbook on experimental models of epilepsy over the last twenty years until now
Neuropharmacology Methods in Epilepsy Research describes fundamental methodologies and procedures in this field
representing the only detailed text concerning experimental models of epilepsy published in the last 20 years This guide
studies the reproduction of well characterized and readily interpretable experimental models of epilepsy to which state of the
art molecular biology techniques can be applied Each chapter features Introduction providing a brief background and
historical account of the techniques and their use Methodology describing equipment solutions species electrodes as well as
considering variations of techniques and stimulation parameters Interpretations demonstrating the relevance of techniques
to epilepsy as well as describing what exactly is being studied and how the data is appropriately applied to understanding
epilepsy Topics include electroshock chemoconvulsions kindling audiogenic seizures focal seizures and brain slice
preparations Discussions also include Recently developed seizure models including status epilepticus and massed trial
simulations Influence of circadian and diurnal rhythms on convulsive activity Behavior al and cognitive deficits associated
with anticonvulsant drug testing Technical approaches i e slice models microdialysis techniques intracranial implant surgery

audiogenic seizure testing kindling paradigms and the rhythmic nature of seizures This unique text provides a thorough reference for the diverse methodologies within this area of neuropharmacological research providing the basis for on going cellular and molecular investigations as well as novel therapeutic approaches to the treatment of epilepsy

Olfactory memory networks: from emotional learning to social behaviors Regina M. Sullivan,Donald A. Wilson,Nadine Ravel,Anne-Marie Mouly,2015-05-08 Odors are powerful stimuli that can evoke emotional states and support learning and memory Decades of research have indicated that the neural basis for this strong odor emotional memory connection is due to the uniqueness of the anatomy of the olfactory pathways Indeed unlike the other sensory systems the sense of smell does not pass through the thalamus to be routed to the cortex Rather odor information is relayed directly to the limbic system a brain region typically associated with memory and emotional processes This provides olfaction with a unique and potent power to influence mood acquisition of new information and use of information in many different contexts including social interactions Indeed olfaction is crucially involved in behaviors essential for survival of the individual and species including identification of predators recognition of individuals for procreation or social hierarchy location of food as well as attachment between mating pairs and infant caretaker dyads Importantly odors are sampled through sniffing behavior This active sensing plays an important role in exploratory behaviors observed in the different contexts mentioned above Odors are also critical for learning and memory about events and places and constitute efficient retrieval cues for the recall of emotional episodic memories This broad role for odors appears highly preserved across species In addition the consistent early developmental emergence of olfactory function across diverse species also provides a unique window of opportunity for analysis of myriad behavioral systems from rodents to nonhuman primates and humans This when combined with the relatively conserved organization of the olfactory system in mammals provides a powerful framework to explore how complex behaviors can be modulated by odors to produce adaptive responses and to investigate the underlying neural networks The present research topic brings together cutting edge research on diverse species and developmental stages highlighting convergence and divergence between humans and animals to facilitate translational research

The Opioid System as the Interface between the Brain's Cognitive and Motivational Systems ,2018-10-09 The Opioid System as the Brain's Interface between Cognition and Motivation Volume 239 focuses on the opioid system as the interface between the brain's cognitive and motivational systems As the opioid system is widely distributed through the brain particularly in areas implicated in cognition hippocampus prefrontal cortex claustrum thalamus and motivation hypothalamus amygdala pontine nuclei periaqueductal gray and medulla this book provides chapters that address ongoing research on topics such as the Brain's cognitive system the Brain's motivational system Antidepressant prescription patterns Antidepressant like effects of opioid receptor modulators the Behavioral effects of antidepressant and anxiolytic drugs and more Contains contributions from both academia and industry to maximize the cross fertilization of differing perspectives on opioid system function in health and
