

The book cover features a dark blue background with a textured, painterly appearance. Overlaid on this background are several fossilized Archaeopteryx specimens, showing the characteristic feather impressions and skeletal structures. The fossils are arranged in a way that suggests flight or a dynamic pose. The title and author's name are printed in a serif font, with the title being significantly larger and more prominent.

Taking Wing Archaeopteryx And The Evolution:

Taking Wing Pat Shipman, 1999-01-15 In 1861 just a few years after the publication of Charles Darwin's *On the Origin of Species* a scientist named Hermann von Meyer made an amazing discovery Hidden in the Bavarian region of Germany was a fossil skeleton so exquisitely preserved that its wings and feathers were as obvious as its reptilian jaws and tail This transitional creature offered tangible proof of Darwin's theory of evolution Hailed as the First Bird Archaeopteryx has remained the subject of heated debates for the last 140 years Are birds actually living dinosaurs Where does the fossil record really lead Did flight originate from the ground up or trees down Pat Shipman traces the age old human desire to soar above the earth and to understand what has come before us *Taking Wing* is science as adventure story told with all the drama by which scientific understanding unfolds

An Introduction to Flapping Wing Aerodynamics Wei Shyy, Hikaru Aono, Chang-kwon Kang, Hao Liu, 2013-08-19 This is an ideal book for graduate students and researchers interested in the aerodynamics structural dynamics and flight dynamics of small birds bats and insects as well as of micro air vehicles MAVs which present some of the richest problems intersecting science and engineering The agility and spectacular flight performance of natural flyers thanks to their flexible deformable wing structures as well as to outstanding wing tail and body coordination is particularly significant To design and build MAVs with performance comparable to natural flyers it is essential that natural flyers combined flexible structural dynamics and aerodynamics are adequately understood The primary focus of this book is to address the recent developments in flapping wing aerodynamics This book extends the work presented in *Aerodynamics of Low Reynolds Number Flyers* Shyy et al 2008

Stephen Jay Gould and the Politics of Evolution David F. Prindle, Birdology Sy Montgomery, 2011-08-04 Meet the ladies a flock of smart affectionate highly individualistic chickens who visit their favorite neighbors devise different ways to hide from foxes and mob the author like she's a rock star In these pages you'll also meet Maya and Zuni two orphaned baby hummingbirds who hatched from eggs the size of navy beans and who are little more than air bubbles fringed with feathers Their lives hang precariously in the balance but with human help they may one day conquer the sky Snowball is a cockatoo whose dance video went viral on YouTube and who's now teaching schoolchildren how to dance You'll meet Harris's hawks named Fire and Smoke And you'll come to know and love a host of other avian characters who will change your mind forever about who birds really are Each of these birds shows a different and utterly surprising aspect of what makes a bird a bird and these are the lessons of *Birdology* that birds are far stranger more wondrous and at the same time more like us than we might have dared to imagine In *Birdology* beloved author of *The Good Good Pig* Sy Montgomery explores the essence of the otherworldly creatures we see every day By way of her adventures with seven birds wild tame exotic and common she weaves new scientific insights and narrative to reveal seven kernels of bird wisdom The first lesson of *Birdology* is that no matter how common they are Birds Are Individuals as each of Montgomery's distinctive Ladies clearly shows In the leech infested rain forest of Queensland you

ll come face to face with a cassowary a 150 pound man tall flightless bird with a helmet of bone on its head and a slashing razor like toenail with which it occasionally eviscerates people proof that Birds Are Dinosaurs You ll learn from hawks that Birds Are Fierce from pigeons how Birds Find Their Way Home from parrots what it means that Birds Can Talk and from 50 000 crows who moved into a small city s downtown that Birds Are Everywhere They are the winged aliens who surround us Birdology explains just how very other birds are Their hearts look like those of crocodiles They are covered with modified scales which are called feathers Their bones are hollow Their bodies are permeated with extensive air sacs They have no hands They give birth to eggs Yet despite birds and humans disparate evolutionary paths we share emotional and intellectual abilities that allow us to communicate and even form deep bonds When we begin to comprehend who birds really are we deepen our capacity to approach understand and love these otherworldly creatures And this ultimately is the priceless lesson of Birdology it communicates a heartfelt fascination and awe for birds and restores our connection to these complex mysterious fellow creatures

Insignificant but Special Bruce Sanford,2023-01-13 Life is a rarity We know of no other planet where life exists other than on Earth Life started out in a most simple form then proceeded along a labyrinth of evolutionary pathways that resulted in extraordinary and unfathomable designs This is a journey from the beginning of time to this very day guided by circumstances contingencies and chaos that has governed Earth s living assemblage But life s presence was not destined to just happen If it wasn t for our moon which gave Earth orbital and rotational stability life would not be as we know it today If it wasn t for volcanic eruptions Earth would be an ice clad frozen globe If it wasn t for one of the tiniest of living organisms that produced a toxic gas complex life would not have arisen If it wasn t for one particular extinction event Homo sapiens would not be walking this planet and you would not be reading this now If it wasn t for a million other things life would be much different or not at all Earth made life from the meek to the monstrous from the banal to the bizarre from the humblest to the haughtiest Strap yourself in alongside a window seat and witness the passing of time to view the episodes of change and how the making of life became the greatest story on Earth

Beasts of Eden David Rains Wallace,2004-05-18 Publisher Description **The Double-Crested Cormorant** Dennis Wild,2012-02-08 This is the story of the survival recovery astonishing success and controversial status of the double crested cormorant After surviving near extinction driven by DDT and other contaminants from the 1940s through the early 1970s the cormorant has made an unprecedented comeback from mere dozens to a population in the millions bringing the bird again into direct conflict with humans Hated for its colonial nesting behavior the changes it brings to landscapes and especially its competition with commercial and sports fishers fisheries and fish farmers throughout the Great Lakes and Mississippi Delta regions the cormorant continues to be persecuted by various means including the shotgun In *The Double Crested Cormorant* Dennis Wild brings together the biological social legal and international aspects of the cormorant s world to give a complete and balanced view of one of the Great Lakes and perhaps North America s most misunderstood species In addition to taking a detailed look

at the complex natural history of the cormorant the book explores the implications of congressional acts and international treaties the workings and philosophies of state and federal wildlife agencies the unrelenting efforts of aquaculture and fishing interests to cull cormorant numbers to acceptable levels and the reactions and visions of conservation groups Wild examines both popular preconceptions about cormorants what kinds of fish they eat and how much and the effectiveness of ongoing efforts to control the cormorant population Finally the book delves into the question of climate and terrain changes their consequences for cormorants the new territories to which the birds must adapt and the conflicts this species is likely to face going forward

Dinosaur Paleobiology Stephen L. Brusatte, 2012-04-30 The study of dinosaurs has been experiencing a remarkable renaissance over the past few decades Scientific understanding of dinosaur anatomy biology and evolution has advanced to such a degree that paleontologists often know more about 100 million year old dinosaurs than many species of living organisms This book provides a contemporary review of dinosaur science intended for students researchers and dinosaur enthusiasts It reviews the latest knowledge on dinosaur anatomy and phylogeny how dinosaurs functioned as living animals and the grand narrative of dinosaur evolution across the Mesozoic A particular focus is on the fossil evidence and explicit methods that allow paleontologists to study dinosaurs in rigorous detail Scientific knowledge of dinosaur biology and evolution is shifting fast and this book aims to summarize current understanding of dinosaur science in a technical but accessible style supplemented with vivid photographs and illustrations The Topics in Paleobiology Series is published in collaboration with the Palaeontological Association and is edited by Professor Mike Benton University of Bristol Books in the series provide a summary of the current state of knowledge a trusted route into the primary literature and will act as pointers for future directions for research As well as volumes on individual groups the series will also deal with topics that have a cross cutting relevance such as the evolution of significant ecosystems particular key times and events in the history of life climate change and the application of a new techniques such as molecular palaeontology The books are written by leading international experts and will be pitched at a level suitable for advanced undergraduates postgraduates and researchers in both the paleontological and biological sciences Additional resources for this book can be found at <http://www.wiley.com/go/brusatte/dinosaurpaleobiology>

Flying Dinosaurs John Pickrell, 2020-07-15 It will be difficult for any reader to think about dinosaurs or birds in the same ways they had before Publishers Weekly The discovery of stunning feathered dinosaur fossils coming out of China in the twentieth century suggests that these creatures were much more bird like than paleontologists previously imagined Further evidence bones genetics eggs behavior and more has shown a seamless transition from fleet footed carnivores to the ancestors of modern birds Mixing colorful portraits with news on the latest fossil findings and interviews with leading paleontologists in the United States China Europe and Australia John Pickrell explains and details dinosaurs development of flight This special capacity introduced a whole new range of abilities for the animals and helped them survive a mass extinction when thousands of other dinosaur species that once populated Earth did

not Pickrell also turns his journalistic eye toward the stories behind the latest discoveries investigating the role of the Chinese black market in trading fossils the controversies among various dinosaur hunters the interference of national governments intent on protecting scientific information and the race to publish findings first that make this research such a dynamic area of science Fascinating

Multiple Analogies in Science and Philosophy Cameron Shelley, 2003-01-01 A multiple analogy is a structured comparison in which several sources are likened to a target In Multiple analogies in science and philosophy Shelley provides a thorough account of the cognitive representations and processes that participate in multiple analogy formation Through analysis of real examples taken from the fields of evolutionary biology archaeology and Plato's Republic Shelley argues that multiple analogies are not simply concatenated single analogies but are instead the general form of analogical inference of which single analogies are a special case The result is a truly general cognitive model of analogical inference Shelley also shows how a cognitive account of multiple analogies addresses important philosophical issues such as the confidence that one may have in an analogical explanation and the role of analogy in science and philosophy This book lucidly demonstrates that important questions regarding analogical inference cannot be answered adequately by consideration of single analogies alone

Why Elephants Have Big Ears Chris Lavers, 2011-04-01 Why Elephants Have Big Ears is the result of one man's lifelong quest to understand why the creatures of the earth appear and act as they do In a wry manner and personal tone Chris Lavers explores and solves some of nature's most challenging evolutionary mysteries such as why birds are small and plentiful why rivers and lakes are dominated by the few remaining large reptiles why most of the large land dwellers are mammals and many more

Earth's Evolving Systems Ronald E. Martin, 2016-12-16 Earth's Evolving Systems The History of Planet Earth Second Edition is an introductory text designed for popular courses in undergraduate Earth history Written from a systems perspective it provides coverage of the lithosphere hydrosphere atmosphere and biosphere and discussion of how those systems interacted over the course of geologic time

Avian Flight, 2006-08-10 Bird flight has always intrigued mankind This book provides an up to date account of our existing knowledge on the subject offering new insights and challenging some established views A brief history of the science of flight introduces the basic physical principles governing aerial locomotion This is followed by a treatment of flight related functional morphology concentrating on the difference in shape of the arm and hand part of the wings on the structure and function of tails and on the shape of the body The anatomy and mechanical properties of feathers receive special attention Aerodynamic principles used by birds are explained in theory by simply applying Newton's laws and in practice by showing the direction and velocity of the attached flow around an arm wing cross section and of the leading edge vortex flow above a hand wing The Archaeopteryx fossils remain crucial in our understanding of the evolution of bird flight despite the recent discovery of a range of well preserved ancient birds Avian Flight offers a novel insight into the interactions between wings and air which challenges established theories relating to the origin of bird flight Take off flapping flight gliding and landing

are the basic ingredients of bird flight and birds use a variety of flight styles from hovering to soaring Flight muscles are the engines that generate the force required to keep the wings and tail in the gliding configuration and perform work during flapping motion The energy required to fly can be estimated or measured directly and a comparison of the empirical results provides insights into the trend in metabolic costs of flight of birds varying in shape and mass from hummingbirds to albatrosses The book will be of interest to biologists ornithologists and bird watchers It will also be of relevance and use to physicists mathematicians and engineers involved with aerodynamics

Quest for the African Dinosaurs Louis Jacobs, 2000-08-28 The story of one paleontologist's fossil digs in Africa and his unexpected findings Winner of the Colbert Award for the best adult book about dinosaurs Winner of the Colbert Award for the best adult book about dinosaurs Louis Jacobs reopened paleontologists' eyes to the African continent when he uncovered a major fossil site in the hills of Malawi in the 1980s During five digging seasons in Malawi and three in Cameroon Jacobs found the remains of two meat eating theropods two herbivorous sauropods an odd crocodile about the size of a Chihuahua and rare early mammals Now in paperback *Quest for the African Dinosaurs* includes Jacobs' new introduction which discusses recent developments in paleontological research in Africa

The First Fossil Hunters Adrienne Mayor, 2023-04-11 Griffins Cyclopes Monsters and Giants these fabulous creatures of classical mythology continue to live in the modern imagination through the vivid accounts of the ancient Greeks and Romans But what if these beings were more than fictions This is the arresting and original idea that Adrienne Mayor explores in *The First Fossil Hunters* Through careful research and documentation she shows that many of the giants and monsters of myth did have a basis in fact in ancient people's discoveries of the enormous bones of long extinct dinosaurs mastodons and other animals that were once abundant in the lands of the Greeks and Romans

To the Heart of the Nile Pat Shipman, 2024-06-11 In 1859 at age fourteen Florence Sz sz stood before a room full of men and waited to be auctioned to the highest bidder But slavery and submission were not to be her destiny Sam Baker a wealthy English gentleman and eminent adventurer was moved by compassion and an immediate overpowering empathy for the young woman and braved extraordinary perils to help her escape Together Florence and Sam whose love would remain passionate and constant throughout their lives forged into literally uncharted territory in a glorious attempt to unravel a mysterious and magnificent enigma called Africa A stunning achievement *To the Heart of the Nile* is an unforgettable portrait of an unforgettable woman a story of discovery bravery determination and love meticulously reconstructed through journals documents and private papers and told in the inimitable narrative style that has already won Pat Shipman resounding international acclaim

Unspoken Cheryl Glenn, 2004 In our talkative Western culture speech is synonymous with authority and influence while silence is frequently misheard as passive agreement when it often signifies much more In her groundbreaking exploration of silence as a significant rhetorical art Cheryl Glenn articulates the ways in which tactical silence can be as expressive and strategic an instrument of human communication as speech itself Drawing from linguistics

phenomenology feminist studies anthropology ethnic studies and literary analysis *Unspoken A Rhetoric of Silence* theorizes both a cartography and grammar of silence By mapping the range of spaces silence inhabits Glenn offers a new interpretation of its complex variations and uses Glenn contextualizes the rhetoric of silence by focusing on selected contemporary examples Listening to silence and voice as gendered positions she analyzes the highly politicized silences and words of a procession of figures she refers to as all the President's women including Anita Hill Lani Guiner Jennifer Flowers and Chelsea Clinton She also turns an investigative ear to the cultural taciturnity attributed to various Native American groups Navajo Apache Hopi and Pueblo and its true meaning Through these examples Glenn reinforces the rhetorical contributions of the unspoken codifying silence as a rhetorical device with the potential to deploy defer and defeat power *Unspoken* concludes by suggesting opportunities for further research into silence and silencing including music religion deaf communities cross cultural communication and the circulation of silence as a creative resource within the college classroom and for college writers
