snowstorms along the Northeastern Coast of the United States 1955 to 1985 documents 20 of the most crippling snowstorms that have affected the heavily populated coastal region of the Middle Atlantic states and southern New England over the last four decades Heavy snowfall and high winds associated with storms often referred to as nor easters can maroon millions of people at home or in transit severely disrupt human services and commerce and endanger the lives of those who venture out doors Paul J Kocin and Louis W Uccellini provide answers to questions of how these important storms develop what factors delineate snow no snow situations and what weather patterns provide clues that foretell such events The book provides a comprehensive overview of this phenomenon from historical climatological and dynamical perspectives using many illustrations maps tables and color schematics The introduction describes the major effects of such storms the complex physical interactions that fuel their development and the problems they present to forecasters trying to predict their fickle behavior and progress A review of the great northeastern storms of the past three centuries follows along with a climatology of the heavy snow events over a 30 year period Descriptions of 20 major storms supply a framework for understanding the dynamical and thermodynamical processes that contribute to heavy snowfall A summary of the physical processes that contribute to the storms concludes with issues that remain to be resolved The case study approach presents a great deal of material contained in hundreds of synoptic analyses in a well organized and useful layout allowing case by case comparisons of common features and differences Extensive tables diagrams and photographs show weather patterns at the surface and aloft emphasizing cyclone tracks and deepening rates the contributions of cold surface anticyclones cold air damming and coastal frontogenesis upper level processes jet streak circulations satellite imagery and three dimensional air flow It is hoped that this book will provide a foundation for researchers and students interested in investigating the processes that interact to produce major winter storms The weather patterns described here provide a first step in the generation of conceptual models and also serve as an easily referenced guide for forecasters concerned with predicting heavy snowfalls along the northeastern coast of the United States

Historical Climate Variability and Impacts in North America Lesley-Ann Dupigny-Giroux, Cary J. Mock, 2009-09-18 Climatologists with an eye on the past have any number of sources for their work from personal diaries to weather station reports Piecing together the trajectory of a weather event can thus be a painstaking process taking years and involving real detective work Missing pieces of a climate puzzle can come from very far afield often in unlikely places In this book a series of case studies examine specific regions across North America using instrumental and documentary data from the 17th to the

19th centuries Extreme weather events such as the Sitka hurricane of 1880 are recounted in detail while the chapters also cover more widespread phenomena such as the collapse of the Low Country rice culture The book also looks at the role of weather station histories in complementing the instrumental record and sets out the methods that involve early instrumental and documentary climate data Finally the book s focus on North America reflects the fact that the historical climate community there has only grown relatively recently Up to now most such studies have focused on Europe and Asia The four sections begin with regional case studies and move on to reconstruct extreme events and parameters This is followed by the role of station history and lastly methodologies and other analyses The editors aim has been to produce a volume that would be instrumental in molding the next generation of historical climatologists They designed this book for use by general researchers as well as in upper level undergraduate or graduate level courses
