Innovations in ceramic technology and style have occurred among two Kalinga pottery-making villages in the northern Philippines. Generationally-based shifts are evident in the designs of Dangukian potters as each new cohort modifies its predecessor's style. In the neighboring village of Dalupa, even more profound changes have occurred since the late 1970s. Dalupa potters have modified traditional vessel shapes and have also introduced an extensive repertoire of nontraditional forms. The sale of these forms supplements the production and exchange of traditional, utilitarian pottery. This ethnoarchaeological study describes social and cultural contexts that have contributed to particular ceramic innovations among Kalinga potters. In doing so, the study places the Kalinga case within a broader theoretical framework that focuses on the forces behind and processes of ceramic change.

Cultural change lies at the very heart of archaeological research. Vestiges of cultural change are often reflected in shifts in ceramic technology and style in prehistoric societies worldwide. As traces of political and economic upheaval, ceramic indicators provide valuable information on past events.

The Social Life of Pots Judith A. Habicht-Mauche, Suzanne L. Eckert, Deborah L. Huntley, 2022-09-06 The demographic upheavals that altered the social landscape of the Southwest from the thirteenth through the seventeenth centuries forced peoples from diverse backgrounds to literally remake their worlds transformations in community identity and power that are only beginning to be understood through innovations in decorated ceramics In addition to aesthetic changes that included new color schemes new painting techniques alterations in design and a greater emphasis on iconographic imagery some of the wares reflect a new production efficiency resulting from more specialized household and community based industries Also they were traded over longer distances and were used more often in public ceremonies than earlier ceramic types Through the study of glaze painted pottery archaeologists are beginning to understand that pots had social lives in this changing world and that careful reconstruction of the social lives of pots can help us understand the social lives of Puebloan peoples In this book fifteen contributors apply a wide range of technological and stylistic analysis techniques to pottery of the Rio Grande and Western Pueblo areas to show what it reveals about inter and intra community dynamics work groups migration trade and ideology in the precontact and early postcontact Puebloan world The contributors report on research conducted throughout the glaze producing areas of the Southwest and cover the full historical range of glaze ware production Utilizing a variety of techniques continued typological analyses optical petrography instrumental neutron activation analysis X ray microprobe analysis and inductively coupled plasma mass spectroscopy they develop broader frameworks for examining the changing role of these ceramics in social dynamics By tracing the circulation and exchange of specialized knowledge raw materials and the pots themselves via social networks of varying size they show how glaze ware technology production exchange and reflected a variety of dynamic historical and social processes Through this material evidence the contributors reveal that technological and aesthetic innovations were deliberately manipulated and disseminated to actively construct communities of practice that cut across language and settlement groups The Social Life of

Craft Production and Social Change in Northern China Anne P. Underhill, 2012-12-06 This book offers an anthropological analysis of how craft production changed in relation to the development of complex societies in northern China It focuses on the production and use of food containers pottery and bronze vessels during the late prehistoric and early historic periods A major theme is how production and use of prestige vessels changed in relation to increase in degree of social inequality The research and writing of this book took place intermittently over a period of several years When I first outlined the book in 1994 I planned to offer a more limited and descriptive account of social change during the late prehistoric period In considering the human desire to display status with prestige goods my initial approach emphasized how the case of northern China was similar to other areas of the world I began to realize that in order to adequately explain how and why craft production changed in ancient China it was crucial to consider the belief systems that motivated production and use of food containers Similarly a striking characteristic of ancient China that I needed to include in the analysis was the preponderance of food containers rather than other goods that were buried with the deceased I decided to investigate the social and ritual uses of food beverages and containers during more than one period of Chinese history Some strong patterns could have emerged during the late prehistoric period

Analytical Archaeometry Howell Edwards, Peter Vandenabeele, 2016-01-13 Analytical Archaeometry describes this interesting and challenging field of research on the border between natural sciences chemistry spectroscopy biology geology and humanities archaeology art history conservation sciences It fills the gap between these two areas whilst focussing on the analytical aspects of this research field The first part of the book studies the main analytical techniques used in this research field The second part expands from the different types of materials usually encountered and the final part is organised around a series of typical research questions The book is not only focussed on archaeological materials but is also accessible to a broader lay audience Overall the book is clearly structured and gives insight into different approaches to the study of analytical providing extensive discussion on a wide range of techniques materials questions and applications Due to the advances in analytical instrumentation and applications in this field it is

important to have all this information merged together Academics as well as professionals in archaeology art history museum labs and conservation science will find this an invaluable reference source ensuring the reader is provided with the latest progress in this research field

The Making of Empire in Bronze Age Anatolia Claudia Glatz,2020-11-12 In this book Claudia Glatz reconsiders the concept of empire and the processes of imperial making and undoing of the Hittite network in Late Bronze Age Anatolia Using an array of archaeological iconographic and textual sources she offers a fresh account of one of the earliest well attested imperialist polities of the ancient Near East Glatz critically examines the complexity and ever transforming nature of imperial relationships and the practices through which Hittite elites and administrators aimed to bind disparate communities and achieve a measure of sovereignty in particular places and landscapes She also tracks the ambiguities inherent in these practices what they did or did not achieve how they were resisted and how they were subtly negotiated in different regional and cultural contexts

Interrogating Networks Lin Foxhall,2021-06-09 Network theory and methodologies have become central to exploring and explaining social economic and political relationships and connections in past societies However in archaeology the deployment of networks has sometimes been more descriptive than analytical Methodologies have often depended upon underlying assumptions which inevitably simplify relationships that were complex and multi faceted However the fragmentary heterogenous and usually proxy data we possess are not always amenable to reconstructing that complexity In ancient societies we must infer the movement of knowledge about how to make things largely from objects themselves This is because we usually lack direct evidence of the human relationships that entwined people with objects and their makers and hence have only imperfect understanding of the full range of diverse factors that shaped the relationships that constituted these networks The chapters in this volume aim to interrogate the interpretative potential of network concepts for understanding the movement over time and space of ideas about making using and moving things through a range of archaeological case studies which reveal both functional and dysfunctional relationships The purpose is to consider how more broadly contextualized and multi faceted studies can both enhance and be enhanced by network and related approaches The volume contributes to the search for greater understanding of the movement and transmission of knowledge or in some cases their absence and to debates about how best to expand the utility of network concepts and approaches

Aspects of Empire in Achaemenid Sardis Elspeth R. M.

Dusinberre,2003-04-10 Elspeth R M Dusinberre proposes a fresh approach to understanding the Achaemenid Empire based on her study of the regional capital Sardis This study uses archaeological artistic and textual sources to demonstrate that the two hundred year Persian presence in this city had a profound impact on local social structures revealing the region s successful absorption both ideological and physical into the Persian Empire During this period Sardis was a centre of burgeoning creativity and vitality where a polyethnic elite devised a fresh culture inspired by Iranian Greek and local Lydian traditions that drew on and legitimated imperial ideology The non elite absorbed and adapted multiple aspects of this culture to create a wholly different profile of what it meant to be Sardian As well as successfully bringing together information on the Achaemenids this book is also an excellent contribution to empire studies Conceptions in the Code Stefan

Cable,2020-01-21 Considers the

Native American abandonment of the South Carolina coast A prevailing enigma in American archaeology is why vast swaths of land in the Southeast and Southwest were abandoned between AD 1200 and 1500 The most well known abandonments occurred in the Four Corners and Mimbres areas of the Southwest and the central Mississippi valley in the twelfth and thirteenth centuries and in southern Arizona and the Ohio Valley during the fifteenth century In Megadrought in the Carolinas The Archaeology of Mississippian Collapse Abandonment and Coalescence John S Cable demonstrates through the application of innovative ceramic analysis that yet another fifteenth century abandonment event took place across an area of some 34.5 million acres centered on the South Carolina coast Most would agree that these sweeping changes were at least in part the consequence of prolonged droughts associated with a period of global warming known as the Medieval Climatic Anomaly Cable strengthens this inference by showing that these events correspond exactly with the timing of two different geographic patterns of megadrought as defined by modern climate models Cable extends his study by testing the proposition that the former residents of the coastal zone migrated to surrounding interior regions where the effects of drought were less severe Abundant support for this expectation is found in the archaeology of these regions including evidence of accelerated population growth crowding and increased regional hostilities Another important implication of immigration is the eventual coalescence of ethnic and or culturally different social groups and the ultimate transformation of societies into new cultural syntheses Evidence for this process is not yet well documented in the Southeast but Cable draws on his familiarity with the drought related Puebloan intrusions into the Hohokam Core Area of southern Arizona during the thirteenth and fourteenth centuries to suggest strategies for examining coalescence in the Southeast The narrative concludes by addressing the broad implications of late prehistoric societal collapse for today s human propelled global warming era that portends similar but much more long lasting consequences **The Archaeology of Midas and the Phrygians** Lisa Kealhofer,2005 Gordion

Plain Pottery Traditions of the Eastern Mediterranean and Near East Claudia Glatz, 2016-07-01

The evolution and proliferation of plain and predominantly wheel made pottery presents a characteristic feature of the societies of the Near East and Eastern Mediterranean since the fourth millennium B C This plain pottery has received little detailed archaeological attention in comparison to aesthetically more pleasing and chronologically sensitive decorated traditions Yet their simplicity and standardization suggest they are products of craft specialists the result of high volume production and therefore important in understanding the social systems in early complex societies This volume reevaluates the role and significance of plain pottery traditions from both historically specific perspectives and from a comparative point of view examines the uses and functions of this pottery in relation to social negotiation and group identity formation helps scholars understand cross regional similarities in development and use
