Public Health Reports , 1982 Law Enforcement Officers' Understanding of Domestic Violence Among Their Colleagues Marie C. Salimbeni, 2011-04 This study examined the perceptions of officers with colleagues who perpetrate acts of domestic violence This was a qualitative research design from a phenomenological perspective The data was gathered by the use of face to face interviews using open ended questions The data was analyzed by the use of bracketing horizontalization clusters of meanings textural and structural descriptions and the invariant structure of the phenomena described by the study participants Upon completion of the 30 interviews the audio tapes were all transcribed and loaded in

to Atlas Ti for the purpose of coding the data for the major themes A constant comparison method was used to analyze the data to help identify the similarities and differences between the study participants perceptions with the phenomena The five qualitative questions each depict a different area of experience with the phenomenon to create a holistic picture of the perceptions of the thirty participants The findings suggest that for some officers the inability to separate their police role from their civilian role may be a factor in the perpetration of domestic violence by law enforcement officers The findings also suggest that social workers may be able to play an important role in the remediation of the problem of domestic violence for those within and outside police social work settings

Physical Violence in American Families Murray Straus, 2017-09-04

The informative and controversial findings in this book are based on two path breaking national surveys of American families Both show that while the family may be the central locus of love and support it is also the locus of risk for those who are physically assaulted The book provides a wealth of information on gender differences and similarities in violence and on the effects of gender roles and inequality Two landmark American studies of violence from the National Family Violence survey form the basis of this book Both show that while the family may be the central locus of love and support it is also the locus of risk for those who are being physically assaulted This is particularly true for women and children who are statistically more at risk of assault in their own homes than on the streets of any American city *Physical Violence in American Families* provides a wealth of information on gender differences and similarities in violence and on the effects of gender roles and inequality It is essential for anyone doing empirical research or clinical assessment

Handbook of Family and Marital Therapy Sharon A.

Shueman, Benjamin B. Wolman, 2012-12-06 Family and marital therapies are rapidly becoming highly used methods of treatment of mental disorders and are no longer ancillary methods to individual psychotherapy. The last few decades have brought about an increasing awareness of the fact that excluding organic etiology, practically all mental disorders are caused, fostered, and/or related to faulty interpersonal relations. As a rule, the earlier in life one is exposed to noxious factors, the more severe is the damage. Thus, early child-parent and child-siblings interactions are highly relevant determinants of mental health and mental disorder. Moreover, parents themselves do not live in a vacuum. Their marital interaction significantly contributes to their own mental health or to its decline, and parent-child relationships are greatly influenced by the nature of intraparental relationships. Parental discord, conflicts, and abandonment affect the child's personality development. Thus, family and marital therapy is more than therapy; it is an important contribution to the prevention of mental disorder. The present volume is comprised of three parts. The first, primarily theoretical, analyzes the fundamental aspects of marital and family therapy. The second part describes the various therapeutic techniques, and the last deals with several specific issues. It gives me great pleasure to acknowledge my gratitude to my coeditor, Dr. George Stricker. Without his thorough and devoted efforts, this volume could not have come into being. I am also profoundly indebted to our consulting editors, Dr. James Framo and Dr.
