Social Thinking Software Practice:

Social Thinking--software Practice Yvonne Dittrich, Christiane Floyd, Ralf Klischewski, 2002 A collection of essays on the interrelationship of social science and software practice Software practice which includes software development design and use needs to go beyond the traditional engineering framework Drawing on a variety of social theory approaches this book focuses on interdisciplinary cooperation in software practice The topics discussed include the facilitation of collaborative software development communication between developers and users and the embedding of software systems in organizations

Object Thinking David West, 2004-02-11 In OBJECT THINKING esteemed object technologist David West contends that the mindset makes the programmer not the tools and techniques Delving into the history philosophy and even politics of object oriented programming West reveals how the best programmers rely on analysis and conceptualization on thinking rather than formal process and methods Both provocative and pragmatic this book gives form to what s primarily been an oral tradition among the field s revolutionary thinkers and it illustrates specific object behavior practices that you can adopt for true object design and superior results Gain an in depth understanding of Prerequisites and principles of object thinking Object knowledge implicit in eXtreme Programming XP and Agile software development Object conceptualization and modeling Metaphors vocabulary and design for object development Learn viable techniques for Decomposing complex domains in terms of objects Identifying object relationships interactions and constraints Relating object behavior to internal structure and implementation design Incorporating object thinking into XP and Agile practice

Social Capital and Information Technology Marleen Huysman, Volker Wulf, 2004 A multidisciplinary examination of the interplay between social capital the value derived from social ties and information technology The concept of social capital or the value that can be derived from social ties created by goodwill mutual support shared language common beliefs and a sense of mutual obligation has been applied to a number of fields from sociology to management It is only lately however that researchers in information technology and knowledge management have begun to explore the idea of social capital in relation to their fields This collection of thirteen essays by computer scientists sociologists communication specialists economists and others presents a multidisciplinary look at this particular intersection of information technology and social science and the need to adopt a sociotechnical perspective For the most part the contributors take a positive view of the interplay of social capital knowledge sharing and community building Some essays look at specific instances including the on line and face to face relationships of a community of athletes the building of social capital among Iranian NGOs and the Internet based communities created by the open source movement while others discuss more general ideas of civic and personal communities The last four essays examine computer applications that augment social capital including topic and member centered communications spaces such as the Expert Finder and the Loops system and virtual repositories of knowledge such as the Answer Garden and Pearls of Wisdom

Affective Learning Together Michael Baker, Jerry Andriessen, Sanna

Järvelä,2013-02-15 In the twenty first century being able to collaborate effectively is important at all ages in everyday life education and work within and across diverse cultural settings People are increasingly linked by networks that are not only means for working and learning together but are also ways of maintaining social and emotional support Collaborating with others requires not only elaborating new ideas together but also being able to manage interpersonal relations In order to design and facilitate effective collaborative situations the challenge is therefore to understand the interrelations between social affective and cognitive dimensions of interactions in groups Affective Learning Together contains in depth theoretical reviews and case studies of group learning in a variety of educational situations and taught disciplines from small groups working in the secondary school classroom to teams of medical students and more informal working groups at university level Contributors provide detailed analyses of the dynamics of interpersonal relations and affects in relation with processes of meaning and knowledge elaboration including discussion of the variety of social learning situations and experiences social identities in group learning emotion motivation and knowledge elaboration conflict arguments and interpersonal tensions in group learning Bringing together a broad range of contributions from internationally recognised researchers who are seeking to broaden deepen and integrate the field of research on collaborative learning this book is essential reading for all serious students of contemporary educational research and practice *Systems, Software and Services Process Improvement* Rory V. Connor,Jan Pries-Heje,Richard Messnarz,2011-06-22 This volume constitutes the refereed proceedings of the 18th EuroSPI conference held in Roskilde Denmark in June 2011 The 18 revised full papers presented together with 9 key notes were carefully reviewed and selected They are organized in topical sections on SPI and assessments SPI and implementation SPI and improvement methods SPI organization SPI people teams SPI and reuse selected key notes for SPI implementation *Social Thinking--Software Practice* Yvonne Dittrich,Christiane Floyd,Ralf Klischewski,2002-05-03 A collection of essays on the interrelationship of social science and software practice **Contemporary Approaches to Activity Theory: Interdisciplinary Perspectives on Human Behavior** Hansson, Thomas,2014-10-31 The human mind is best understood when it is studied in the context of meaningful and goal oriented interactions between individuals and their environment These internal and external activities help to shape the human consciousness and experience Contemporary Approaches to Activity Theory Interdisciplinary Perspectives on Human Behavior is an opportunity to study the complex socially oriented contexts of humans by considering the entirety of our environments cultures motivations signs and tools and various activities Highlighting strategies in design educational and work practice and methodological analysis this book is an essential reference source for academicians researchers and students interested in gaining a thorough understanding of the interaction between humans and their environments **Extreme Programming and Agile Processes in Software Engineering** Jutta Eckstein,Hubert Baumeister,2004-05-14 Software development is being revolutionized The heavy weight processes of the 1980s and 1990s are being replaced by light weight so called agile processes Agile processes move the focus

of software development back to what really matters running software This is only made possible by accepting that software development is a creative job done by with and for individual human beings For this reason agile software development encourages interaction communication and fun This was the focus of the Fifth International Conference on Extreme Programming and Agile Processes in Software Engineering which took place between June 6 and June 10 2004 at the conference center in Garmisch Partenkirchen at the foot of the Bavarian Alps near Munich Germany In this way the conference provided a unique forum for industry and academic professionals to discuss their needs and ideas for incorporating Extreme Programming and Agile Methodologies into their professional life under consideration of the human factor We celebrated this year's conference by reflecting on what we had achieved in the last half decade and we also focused on the challenges we will face in the near future

Realigning Research and Practice in Information Systems Development

Nancy L. Russo, Brian Fitzgerald, Janice I. DeGross, 2013-06-29 Given the pervasive nature of information technology and information systems in the modern world the design and development of IS and IT are critical issues of concern New research topics continuously emerge in tandem with the latest developments in technology E Business Knowledge Management Business Process Reengineering for example However when the initial flurry of research abates and the gloss of these areas has diminished somewhat as it inevitably does the enduring core issue remains as to how to develop systems to fully exploit these new areas Both information systems and information technology are interpreted fairly broadly in this book Of particular interest to the editors were research studies that facilitate an understanding of the role and impact of information technology on society organizations and individuals and which strive to improve the design and use of information systems in that context The contributions to the book are categorized into four broad themes First is the core issue of developing information systems in the current environment In this section several fundamental challenges to current assumptions and conventional wisdom in information systems development are posed The second section considers the management of information systems Again the conventional wisdom is challenged The penultimate section focuses on researching information systems Here various issues to do with research methods are surfaced and the use of leading edge research methods in information systems development is pioneered and discussed Finally a section is devoted to understanding information systems This section addresses the perennial challenge in the IS field in relation to the conceptual foundations of the field This volume comprises the proceedings of the Working Conference on Realigning Research and Practice in Information Systems Development The Social and Organizational Perspective which was sponsored by the International Federation for Information Processing IFIP and held in Boise Idaho USA in July 2001 Given the central importance of information systems development in the current age this eclectic book which considers the topic from a rich and varied set of perspectives will be essential reading for researchers and practitioners working in all areas of IS and IT

Socio-informatics

Volker Wulf, 2018 This book is about how computer systems might be designed to serve their users rather better It deals with how to study the

natural behaviour of users to see how computer systems might best help them and how one might also involve them in the design of computer systems that will assist them in their everyday practices Strategic Information Systems: Concepts, Methodologies, Tools, and Applications Hunter, M. Gordon, 2009-08-31 This 4 volume set provides a compendium of comprehensive advanced research articles written by an international collaboration of experts involved with the strategic use of information systems Provided by publisher **Guide to Advanced Empirical Software Engineering** Forrest Shull, Janice Singer, Dag I. K. Sjøberg, 2007-11-21 Empirical studies have become an important part of software engineering research and practice Ten years ago it was rare to see a conference or journal article about a software development tool or process that had empirical data to back up the claims Today in contrast it is becoming more and more common that software engineering conferences and journals are not only publishing but eliciting articles that describe a study or evaluation Moreover a very successful conference International Symposium on Empirical Software Engineering and Measurement journal Empirical Software Engineering and organization International Software Engineering Research Network have all evolved in the last 10 years that focus solely on this area As a further illustration of the growth of empirical software engineering a search in the articles of 10 software engineering journals showed that the proportion of articles that used the term empirical software engineering doubled from about 6% in 1997 to about 12% in 2006 While empirical software engineering has seen such substantial growth there is not yet a reference book that describes advanced techniques for running studies and their application This book aims to fill that gap The chapters are written by some of the top international empirical software engineering researchers and focus on the practical knowledge necessary for conducting reporting and using empirical methods in software engineering The book is intended to serve as a standard reference **Handbook on Teaching Empirical Software Engineering** Daniel Mendez, Paris Avgeriou, Marcos Kalinowski, Nauman Bin Ali, 2024-12-24 This handbook exploits the profound experience and expertise of well established scholars in the empirical software engineering community to provide guidance and support in teaching various research methods and fundamental concepts A particular focus is thus on combining research methods and their epistemological settings and terminology with didactics and pedagogy for the subject The book covers the most essential contemporary research methods and philosophical and cross cutting concerns in software engineering research considering both academic and industrial settings at the same time providing insights into the effective teaching of concepts and strategies To this end the book is organized into four major parts In the first part the editors set the foundation with two chapters one laying out the larger context of the discipline for a positioning of the remainder of this book and one guiding the creation of a syllabus for courses in empirical software engineering The second part of the book lays the fundamentals for teaching empirical software engineering addressing more cross cutting aspects from theorizing and teaching research designs to measurement and quantitative data analysis In the third part general experiences and personal reflections from teaching empirical software engineering in different settings are

shared Finally the fourth part contains a number of carefully selected research methods presented through an educational lens Next to the chapter contributions themselves that provide a more theoretical perspective and practical advice readers will find additional material in the form of for example slide sets and tools in an online material section The book mainly targets three different audiences 1 educators teaching empirical software engineering to undergraduate postgraduate or doctoral students 2 professional trainers teaching the basic concepts of empirical software engineering to software professionals and 3 students and trainees attending such courses

Web-Based and Blended Educational Tools and Innovations Nikos Karacapilidis, Mahesh S. Raisinghani, Eugenia M. W.
