Mark Berliner, Douglas Nychka, Timothy Hoar, 2000 **The Atmospheric Sciences** National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Board on Atmospheric Sciences and Climate, 1998-11-22 Technology has propelled the atmospheric sciences from a fledgling discipline to a global enterprise Findings in this field shape a broad spectrum of decisions what to wear outdoors whether aircraft should fly how to deal with the issue of climate change and more This book presents a comprehensive assessment of the atmospheric sciences and offers a vision for the future and a range of recommendations for federal authorities the scientific community and education administrators How does atmospheric science contribute to national well being In the context of this question the panel identifies imperatives in scientific observation recommends directions for modeling and forecasting research and examines management issues including the growing problem of weather data availability Five subdisciplines physics chemistry dynamics and weather forecasting upper atmosphere and near earth space physics climate and climate change and their status as the science enters the twenty first century are examined in detail including recommendations for research This readable book will be of interest to public sector policy framers and private sector decisionmakers as well as researchers educators and students in the atmospheric sciences Studies in the Atmospheric Sciences Mark L. Berliner, Douglas Nychka, Timothy Hoar, 2012-12-06 The National Center for Atmospheric Research NCAR in Boulder Colorado is a major institution performing research in the environmental sciences After an open competition the National Science Foundation gave its financial support to NCAR for the establishment of a much needed statistics probability program in the geophysical sciences The result is the NCAR Geophysical Statistics Project GSP The primary mission of this program is To foster excellence in the use of modern statistical science in the geophysical and environmental sciences To attract and support statistical scientists for collaborative research To fulfill its mission GSP engages in research in statistical science and its application to the atmospheric and allied sciences It supports a variety of collaborative efforts between statistical scientists and disciplinary scientists Senior statisticians both members of and visitors to GSP work in conjunction with researchers at NCAR and elsewhere in the application of current statistical methods as well as in the development of new statistical models and techniques Senior GSP members and NCAR researchers also collaborate in the mentoring of junior members typically post doctoral level or statistics graduate students **Strategic Guidance for the National Science Foundation's Support of the Atmospheric Sciences** National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Strategic Guidance for NSF's Support of the Atmospheric Sciences, 2007-05-31 The National Science Foundation's Division of Atmospheric Sciences ATM supports research to develop new understanding of Earth's atmosphere and how the Sun impacts it Strategic Guidance for the National Science Foundation's Support of the Atmospheric Sciences provides guidance to ATM on its strategy for achieving

its goals in the atmospheric sciences including cutting edge research education and workforce development service to society computational and observational objectives and data management The report reviews how the atmospheric sciences have evolved over the past several decades and analyzes the strengths and limitations of the various modes of support employed by ATM It concludes that ATM is operating in an environment that is ever more cross disciplinary interagency and international making a more strategic approach necessary to manage activities in a way that actively engages the atmospheric sciences community At the same time ATM should preserve opportunities for basic research especially projects that are high risk potentially transformative or unlikely to be supported by other government agencies Finally ATM needs to be more proactive in attracting highly talented students to the atmospheric sciences as an investment in the ability to make future breakthroughs

When Weather Matters National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Progress and Priorities of U.S. Weather Research and Research-to-Operations Activities, 2010-11-09 The past 15 years have seen marked progress in observing understanding and predicting weather At the same time the United States has failed to match or surpass progress in operational numerical weather prediction achieved by other nations and failed to realize its prediction potential as a result the nation is not mitigating weather impacts to the extent possible This book represents a sense of the weather community as guided by the discussions of a Board on Atmospheric Sciences and Climate community workshop held in summer 2009 The book puts forth the committee's judgment on the most pressing high level weather focused research challenges and research to operations needs and makes corresponding recommendations The book addresses issues including observations global non hydrostatic coupled modeling data assimilation probabilistic forecasting and quantitative precipitation and hydrologic forecasting The book also identifies three important emerging issues predictions of very high impact weather urban meteorology and renewable energy development not recognized or emphasized in previous studies Cutting across all of these challenges is a set of socioeconomic issues whose importance and emphasis while increasing has been undervalued and underemphasized in the past and warrants greater recognition and priority today

Review of the U.S. Climate Change Science Program's Synthesis and Assessment Product on Temperature Trends in the Lower Atmosphere National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Climate Research Committee, Committee to Review the U.S. Climate Change Science Program's Synthesis and Assessment Product on Temperature Trends in the Lower Atmosphere, 2005-06-10 The U S Climate Change Science Program CCSP established in 2002 to coordinate climate and global change research conducted in the United States and to support decision making on climate related issues is producing twenty one synthesis and assessment reports that address its research observation and decision support needs The first report produced by the National Oceanic and Atmospheric Administration NOAA in coordination with other agencies focuses on understanding reported differences between independently produced data sets of temperature trends for the surface

through the lower stratosphere and comparing these data sets to model simulations To ensure credibility and quality NOAA asked the National Research Council to conduct an independent review of the report The committee concluded that the report *Temperature Trends in the Lower Atmosphere Understanding and Reconciling Differences* is a good first draft that covers an appropriate range of issues but that it could be strengthened in a number of ways *Strategic Guidance for the National Science Foundation's Support of the Atmospheric Sciences* National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Strategic Guidance for NSF's Support of the Atmospheric Sciences, 2007-07-01 The National Science Foundation's Division of Atmospheric Sciences ATM supports research to develop new understanding of Earth's atmosphere and how the Sun impacts it Strategic Guidance for the National Science Foundation's Support of the Atmospheric Sciences provides guidance to ATM on its strategy for achieving its goals in the atmospheric sciences including cutting edge research education and workforce development service to society computational and observational objectives and data management The report reviews how the atmospheric sciences have evolved over the past several decades and analyzes the strengths and limitations of the various modes of support employed by ATM It concludes that ATM is operating in an environment that is ever more cross disciplinary interagency and international making a more strategic approach necessary to manage activities in a way that actively engages the atmospheric sciences community At the same time ATM should preserve opportunities for basic research especially projects that are high risk potentially transformative or unlikely to be supported by other government agencies Finally ATM needs to be more proactive in attracting highly talented students to the atmospheric sciences as an investment in the ability to make future breakthroughs

challenges The Future of Atmospheric Chemistry Research Remembering Yesterday Understanding Today Anticipating Tomorrow summarizes the rationale and need for supporting a comprehensive U S research program in atmospheric chemistry comments on the broad trends in laboratory field satellite and modeling studies of atmospheric chemistry determines the priority areas of research for advancing the basic science of atmospheric chemistry and identifies the highest priority needs for improvements in the research infrastructure to address those priority research topics This report describes the scientific advances over the past decade in six core areas of atmospheric chemistry emissions chemical transformation oxidants atmospheric dynamics and circulation aerosol particles and clouds and biogeochemical cycles and deposition This material was developed for the NSF s Atmospheric Chemistry Program however the findings will be of interest to other agencies and programs that support atmospheric chemistry research
